through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time to a primary school (aside from a small area in the south west which is within 11-15 minutes) and the whole site is within 6-10 minutes to a secondary school; therefore it is likely to have a significant positive effect. It is also within 25 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Approximately half of this site is within 6-10 minutes travel time of a GP while the other half is 11-15 minutes from a GP. The site is also within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to the A651 (Bradford Road) and approximately 130m south of the A58 (Whitehall Road West), which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the north-east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the	++	This site is within 600m of more than three recreational facilities. There is a public right of way (PRoW) and three footpaths within walking distance, the closest being directly adjacent to the north western boundary of the site. Amenity

SA Objectives	SA Score	Justification
provision of new recreation facilities and areas of open space and encourage their usage.		greenspaces nearby include an area of semi natural and natural greenspace and a park and garden, which includes provision for children and young people. Other areas include two outdoor sports facilities and an allotment. A significant positive effect is therefore identified
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (2.33ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.33 ha) on mainly brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a small site (2.33 ha) mainly on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on Oakroyd Hall Fire Services HQ building which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Tong Moor Local Nature Reserve is the closest of such features but is located approximately 1.1km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	0	This site is mainly on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on brownfield land; therefore a potential minor positive effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H173: Land adjacent to 17 Whitehall Road West, Birkenshaw

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of the site is within 16-20 minutes travel time of the nearest employment node (aside from a small area in the far north west, which is 21-25 minutes); therefore, a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however, this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part, on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		This site is within 10 minutes travel time to both a primary and secondary school so is likely to have a significant positive effect. It is also within 25 minutes to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of the site is within 11-15 minutes travel time to a GP (aside from a small area in the far north-east which is 6-10 minutes) and within 41-45 minutes to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The northern boundary of the site is adjacent to the A58 (Whitehall Road West) and approximately 100m east of the A651 (Bradford Road), which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time to a local centre and within 16-20 minutes to a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are three public rights of way (PRoW), the closest being directly adjacent to the site in the south. Open space nearby includes, an area of semi natural and natural greenspace and a park and garden, which includes provision for children and young people. There are also three outdoor sports facilities. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.69ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.69ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the land has been designated as Grade 3 agricultural quality, aside from a small area in the east which is designated as urban land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.69ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Oakwell Local Nature Reserve is the closest of such features but is located approximately 1.1km to the south and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H174: Land north of Manchester Road, Linthwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The whole site is with 6-10 minutes to a primary school. Levels of access to secondary schools vary throughout the site. The least accessible area is in the north, where it is 31-35 minutes travel time to a secondary school. However, the most accessible areas are in the far south eastern and western corners where travel times are within 21-25 minutes to a secondary school. In between, journey times to vary between those two extremes. Therefore, a minor positive effect on this objective is expected. It is also within 16-20 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of the site is within 11-15 minutes travel time to a GP (aside from an area in the south west of the site which is within 6-10 minutes). Approximately half of this site is also within 36-40 minutes to a hospital, while the other half is within 41-45 minutes to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This southern boundary of the site is adjacent to the A62 (Manchester Road) which may mean that residents in that part of the site are affected by road noise. There are also existing residential properties adjacent to the site to the west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes travel time to a local centre (although a small area in the north of the site is within 11-15 minutes). Approximately half of this site is within 6-10 minutes to a town/district centre, while the other half is within 11-15 minutes; therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	This site is within 600m of more than three recreational facilities, including several public rights of way (PRoW), the closest being directly adjacent to the site in the west. Open space provisions nearby includes three amenity green spaces, one park and garden and an area of semi natural and natural greenspace. Other areas include two outdoor sports facilities, a site with provision for children and young people. A significant positive effect is therefore identified.

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.64ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.64ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.64ha) on brownfield land; therefore, development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 170m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	0	This site is on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: local amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H175: Land off Midway, South Crosland

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 26-30 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is within 6-10 minutes travel time of a primary school and 26-30 minutes of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 6-10 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties on Church Lane to the south and on Midway to the west. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes of a local centre. The majority of the site is also within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is in close proximity to a number of open spaces. The Holy Trinity Church grounds and cemetery are accessible within 20m to the south east of the site. Dean Wood provides natural and semi-natural greenspace to the north of the site within 180m. An allotment is located within 480m to the east of the site on Huddersfield Road. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.15ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.15ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land in relation to its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.15ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the nearby buildings of the Church of the Holy Trinity, its churchyard walls, the vicarage, National School and Sun End Farmhouse and barn which have been designated as Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 210m of the Dean Wood to the north which have been designated as a Local Wildlife Site. Bank Wood has been identified as a Candidate Local Wildlife Site and is located to the south west of the site within 310m. The site is within 945m of Spring Wood Honley to the south east which and this area has been designated as a Local Wildlife Site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 2: recreation and leisure, 10: transport, and 19: climate change, and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H176: Land behind former Blue Bell PH, Close Hill, Taylor Hill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes travel time of a primary school and 5 minutes of a secondary school. A significant positive effect is therefore likely on this SA objective. The site is also within 6-10 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of a GP and within 26-30 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Blagden Lane to the south and on Close Hill Lane to the north. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 5 minutes travel time of a local centre. The site is also within 16-20 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--	<p>The site is on land which has been identified as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. To the north within 15m further semi-natural and natural greenspace is provided. Allotments are also maintained within this area. Amenity greenspace is provided within 175m to the north east. Further amenity greenspace is provided within 300m to the west on Fair Lea Road and there is also provision for children and young people made at this location. Access to the footpath which connects Blue Bell Hill to Blagden Lane is provided within 80m to the south west of the site. A mixed (significant positive and potential significant negative) effect is therefore identified on this SA objective.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.7ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.7ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land in relation to its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.7ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. The site is in close proximity to Taylor Hill Working Men's Club which has been designated as a Grade II Listed Building. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 765m of the Beaumont Park, Huddersfield to the west which has been designated as a Local Geological Site. The proximity of the site to this designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on mostly greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8 recreation and leisure (it should be noted that a mixed effects were identified overall for this SA objective) and 10: transport and potential significant negative effects were identified in relation to SA objective 8: recreation and leisure (it should be noted that a mixed effects were identified overall for this SA objective). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H177: Land at Springfield Farm, Penistone Road, Birds Edge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 56-60 minutes travel time of the nearest employment node. A part of the site to the west is located more than 60 minutes travel time from the nearest employment node. Overall a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (a small part of the site to the north east is within 5 minutes travel time of a primary school) and 31-35 minutes travel time of a secondary school (small part of the site to the north east is within 26-30 minutes travel time of a secondary school). A minor positive effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 16-20 minutes travel time of a GP (a part of the site to the north east is within 11-15 minutes travel time of a GP). The site is also located more than 60 minutes travel time from a hospital. A minor negative effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A629 along its eastern edge. It is considered that the close proximity of this major road may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 21-25 minutes travel time of a local centre (a small part of the site to the north east is within 16-20 minutes travel time of a local centre). The majority of the site is also within 21-25 minutes travel time of a town/district centre (a small part of the site to the north east is within 16-20 minutes of a town/district centre); therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located within 35m to the south east of the site and a park which includes a children's playground borders this site. Further outdoor sports facilities are located within 200m to the north of the site. Access to a footpath is provided within 55m to the east of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make</p>

SA Objectives	SA Score	Justification
usage.		use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.09ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one out of the eight features assessed. Therefore, a minor positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.09ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.09ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA D9: Low Common, Royd Moor and Whitley Common, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently rising landform and is open, large scale and exposed. Woodland cover is sparse and there is strong rural character and important relative levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill which is within 750m. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Lower Jane Well which is within 950m to the north east and has been designated as a Local Wildlife Site. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land but is not within Flood Zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on mostly greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified in relation to SA objectives 1: employment and 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H178: Land off Southwood Avenue, Holney, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is located more than 60 minutes travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	--?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located more than 60 minutes travel time from a primary school and more than 60 minutes travel time from a secondary school. A significant negative effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located more than 60 minutes travel time from a GP and more than 60 minutes travel time from a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Southwood Avenue to the north. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located more than 60 minutes travel time from a local centre. The site is also located more than 60 minutes travel time from a town/district centre; therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located within 450m to the north west of the site. Further outdoor sports facilities are located to the south west of the site within 360m. A footpath is located within 30m to the south of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.6ha); therefore a minor positive effect is likely.</p>

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.6ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.6ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity to Hey Wood/West Wood which is within 90m to the north east and has been identified as a Candidate Local Wildlife Site. Honley Station Cutting is within 430m to the north west of the site and has been designated as a SSSI. To the north of the site Upper Park Wood is within 780m and has been designated as a Local Nature Reserve and a Local Wildlife Site. Brockholes and Round Wood, Brockholes is located within 895m to the south of the site and has been designated as a Local Geological Site. The proximity of the site to these designated biodiversity and geodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, and 6: local services, 10: transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H179: Land off Woodhead Road, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. A significant positive effect is therefore likely on this SA objective. The majority of the site is also within 6-10 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is directly adjacent to the A616 along its western edge. It is considered that the close proximity of this major road may result in noise pollution affecting new residents at the site in the longer term and as such a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located adjacent to the site to the south east and additional outdoor sports facilities are located within 390m to the south of the site. A cemetery is provided within 205m to the west of the site. An allotment is located within 355m to the north of the site. The footpath network can be accessed within 55m to the north east of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make</p>

SA Objectives	SA Score	Justification
		use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.85ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.85ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.85ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on a number of nearby Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity to a number of areas which have been designated due to their importance in terms of biodiversity. Honley Station Cutting has been designated as an SSSI and is within 70m to the north east of the site. Also to the north east of the site within 450m Upper Park Wood has been designated as a Local Nature Reserve and a Local Wildlife Site. Spring Wood Honley is within 585m to the west of the site and has been designated as a Local Wildlife Site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H180: Land off Greenhill Bank Road, Scholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	The site is on land which currently has a footpath running through it, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is in close proximity to a number of open spaces. Outdoor sports facilities are located within 185m to the east of the site. Allotments can be accessed within 445m to the east of the site and further allotments are accessible within 450m to the north of the site. A semi-natural and natural greenspace is located within 520m to the south of the site. As such given that the relative

SA Objectives	SA Score	Justification
usage.		close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective and overall a mixed effect is recorded.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.61ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.61ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.61ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Morton Wood is the closest of such features but is located 1.30km to the south of the site and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is located on greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 16-20 minutes travel time of a GP and more than 60 minutes travel time from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south west on St George's Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The site is also within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities are located to the north east within 485m. A semi-natural and natural greenspace is provided within 210m to the south of the site. Amenity greenspace is provided within 300m also to the south.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.41ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.41ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Morton Wood which has been designated as a Local Wildlife Site and is within 940m to the south. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is located greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified in relation to SA objective 1: employment. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H182: Land rear of Springfield Avenue, Clayton West

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The the site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and also within 16-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The majority of the site is also within 16-20 minutes of the nearest further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Springfield Close. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities and a semi-natural and natural greenspace are located adjacent to the site to west. Cliffe Wood provides access to further semi-natural and natural greenspace within 210m to the east and there is also access to a bowling green and a small park at this location. A footpath runs along the western edge of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
which meets their needs.		affordable housing. This site is relatively small (1.15ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.15ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.15ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is bordered by part of Riding Wood on its western edge and this area has been identified as a Candidate Local Wildlife Site. Within 240m to the south east of site the other part of Riding Wood which has been designated as a Local Wildlife Site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H183: Gunthwaite Top Farm, Gunthwaite Lane, Upper Denby

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 41-45 minutes travel time of the nearest employment node (a small part of the sit to the south is located more than 60 minutes from the nearest employment node); therefore a minor negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	0?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The north eastern part of the site is located 16-20 minutes travel time from a primary school. The south western part of the site is located within 6-10 minutes travel time of a primary school. The travel times to a primary school for the areas in between these two extremes vary. The majority of the site is also within 21-25 minutes of the secondary school (a small part of the site to the south west is located more than 60 minutes from a secondary school). A mixed effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a small part of the time is located more than 60 minutes travel time from a GP) and more than 60 minutes travel time from a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Denby Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre (a small part of the site to the south is located more than 60 minute from a local centre). The majority of the site is also within 11-15 minutes travel time of a town/district centre (a small part of the site to the south is located more than 60 minute from a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation	++	<p>The site is in close proximity to a number of open spaces. A cemetery is located to the north of the site within 60m. Also to the north of the site within 110m outdoor sports facilities are provided. A small park which contains a children's playground is accessible on Coalpit Lane within 420m to the north east of the site</p>

SA Objectives	SA Score	Justification
facilities and areas of open space and encourage their usage.		As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.31ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.31ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.31ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA N2: Cawthron Park and West Barnsley Rolling Wooded Farmland, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating and rolling farmland with frequent blocks of mostly deciduous woodland. It is a sparsely settled landscape, with a high level of tranquillity and a traditional rural feel throughout due to the lack of urbanising influences.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is with 610m of the Candidate Local Wildlife Site Denby Delph which is to the north west. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on mostly greenfield land; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site although containing some brownfield previously developed land is located on mostly greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site for any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H184: Dry Hill Farm, Dry Hill Lane, Denby Dale

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 36-40 minutes travel time of the nearest employment node (a small part of the site to the north east is within 41-45 minutes of the nearest employment node); therefore a negligible effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. The site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is bordered by an industrial building to the north east on Colliers Way. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 6-10 minutes travel time of a local centre. The site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Outdoor sports facilities and a skateboard park/ and teenage shelter are provided within 145m to the south east of the site within 185m on Back Lane. An allotment is located within 310m to the south of the site on Long Lane. Park Mill Lane provides access to a children's playground to the south of the site within 345m. A bridleway is accessible at the site's southern edge along Langley Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.68ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.68ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.68ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities

SA Objectives	SA Score	Justification
		may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity to any areas which have been designated for their importance in terms of biodiversity. The close of such sites is part of Riding Wood which has been identified as a Candidate Local Wildlife Site and is within 1.05km to the south west. A negligible effect is therefore expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development proposed.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is also bordered by the River Dearne to the north. Although the majority of the site is within an area which has been identified as being within Flood Zone 2 only a very small part of the site is within Flood Zone 3. A minor negative effect is therefore likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H186: Land west of Fusden Lane, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The southern end of this site is within 11-15 minutes travel time of an employment node, however the far northern tip of the site is within 21-25 minutes travel time of an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore, a mixed effect is likely overall – significant positive for the southern part of the site and minor positive for the northern part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The southern part of this site is within 6-10 minutes of a primary school and 11-15 minutes of a secondary school as well as 21-25 minutes of a further education facility. The far north-western corner of the site is within 16-20 minutes travel time of a primary school, 16-20 minutes travel time of a secondary school and 26-30 travel time of a further education facility. In between, journey times to education nodes vary in between those two extremes. Therefore, a mixed effect is likely overall – significant positive for the southern part of the site and minor positive for the northern part of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of a GP and within 41-45 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A643 (Spen Lane) and residents could be affected by noise pollution over the longer term. This results in a significant negative effect. In addition, there are a number of residential properties within 100m to the south, east and west of the site and the construction of the site could result in noise and light pollution to these residents which reinforces the negative effect.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space with 600m south of the site, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the north of the site (Fusden Wood). There are also semi-natural and natural greenspace, areas for children and young people, outdoor sports facilities and amenity greenspace. In addition, there is a number of PRow footpaths surrounding the site and within 600m, one of which is adjacent to the southern end of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.11ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.11ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. In addition, the site is classified as grade 3 agricultural land, and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.11ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H187: Land north of Banks Avenue and Ashford Park, Golcar, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 31-35 minutes travel time of an employment node; therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time of a primary school and 31-35 minutes travel time of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m south, east and west of the site, and during construction of the site, residents may experience increased noise and light pollution. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of areas of open space with 600m south of the site, the closest of which is an outdoor sports facility approximately 190m south of the site. Additional areas of open space include other outdoor sports facilities, semi-natural and natural greenspace, a park and garden, allotments, areas for children and young people and amenity greenspace. There is also a number of PRow footpaths surrounding the site and within 600m, one of which runs alongside the south-western edge of the site. There is also a bridleway approximately 50m north of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.98ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.98ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.98ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Buildings at Holling Hall, approximately 70m of the site. Historic England have considered it possible that the loss of this site and its subsequent development could harm elements which contribute to the significance of these buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	0?	The site is not within 1km of any biodiversity or geodiversity designation, and therefore is likely to have a negligible effect on this SA objective. However, this is uncertain as there may still be effects on non-designated biodiversity, and

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		depending on the design of the development, and it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified for this site.		

H188: Land to the west of Penistone Road, Fenay Bridge, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within at least 11-15 minutes travel time of an employment node (an area in the south is within 6-10 minutes); therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Levels of access to educational facilities vary within this site. The most accessible part of the site is the central to southern part of the site which is within 6-10 minutes travel time of a primary school, 11-15 minutes of a secondary school and 11-15 minutes of a further education facility. The least accessible part of the site is a small area in the centre west of the site which is within 11-15 minutes of a primary school, 16-20 minutes of a secondary school and 21-25 minutes of a further education facility. In between, journey times to education nodes vary in between those two extremes. Although the level of accessibility to educational facilities vary across this site, an overall significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 6-10 minutes travel time of a GP and within 36-40 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within close proximity of an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The eastern edge of this site is directly adjacent to the A629 (Penistone Road) which could result in noise pollution for future residents over the longer term. Therefore a significant negative effect is likely. There are also a number of residential properties within 100m to the south and east of the site, and during construction of the site, residents at those existing properties may experience increased noise and light pollution, which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time of a local centre and within at least 11-15 minutes travel time of a town/district centre (the southern part of the site is within 6-10 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	There are a number of recreational facilities and areas of open space with 600m south of the site, the closest of which

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		is a green corridor approximately 50m east of the site. There are also outdoor sports facilities, semi-natural and natural greenspace, a park and garden, allotments, areas for children and young people and amenity greenspace. In addition, there is also a number of PRow footpaths within 600m to the east of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (12.56ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (12.56ha) and on greenfield land which is classified as being grade 3 agricultural quality; therefore a significant negative effect is expected on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (12.56ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Castle Hill Scheduled Monument, the Grade I Listed Woodsome Hall and the Grade II Listed Locker Room building immediately to north of Woodsome Hall and the Grade II Listed fuel store 200 yards south east of Woodsome Hall. Historic England has considered it possible that the loss of this site and its subsequent development could harm elements which contribute to the significance of these assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity and geodiversity designations within 1km of the site, including Almondbury Common approved Local Wildlife Site (approximately 580m west of the site), Carr Wood candidate Local Wildlife Site (approximately 610m west of the site), Lepton Great Wood candidate Local Wildlife Site (approximately 660m east of the site), Lepton Great Wood Local Geological Site (approximately 800m south-east of the site) and Wakefield Road candidate Local Wildlife Site (approximately 700m north of the site). Therefore, development here could have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	--	This site is on greenfield land and mainly within flood zone 3; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: use of land (part of a mixed effect), 12: character and landscape and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H189: Land to the north and south of Woodsome Road, Fenay Bridge, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Both components of this site are within 6-10 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Both components of this site are within 6-10 minutes travel time of a primary school, 11-15 minutes travel time of a secondary school and 11-15 minutes of a further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Both components of the site are within 6-10 minutes travel time of a GP and within 36-40 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is directly adjacent to the A629 (Penistone Road) which could result in noise pollution on future residents over the longer term resulting in a significant negative effect. There are also a number of residential properties within 100m south and west of the site, and commercial premises are within 100m to the south and south-east. During construction of the site, these residences and premises may experience increased noise and light pollution which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Both components of this site are within 6-10 minutes travel time of a local centre and within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	There are a number of recreational facilities and areas of open space with 600m south of the site, the closest of which is an outdoor sports facility (Woodsome Hall Golf Course) approximately 120m west of the site. There are also other outdoor sports facilities, semi-natural and natural greenspace, amenity greenspace, a Local Nature Reserve and a green corridor. Moreover, there are also a number of PRow footpaths to the east of the site. Therefore, a significant

SA Objectives	SA Score	Justification
space and encourage their usage.		positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.76ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.76ha) and on mostly greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is also completely within an area classed as grade 3 agricultural land and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.76ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill, the Grade I Listed Woodsome Hall and the Locker Room building immediately to the north of Woodsome Hall and the fuel store 200 yards south east of Woodsome Hall, both of which are Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is within 1km of a number of biodiversity and geodiversity sites, the closest of which is Lepton Great Wood candidate Local Wildlife Site which is approximately 630m east of the site. Other sites include Lepton Great Wood Local Geological Site which is approximately 710m south-east, Carr Wood candidate Local Wildlife Site which is approximately 700m west and Almonbury Common approved Local Wildlife Site which is approximately 890m west. Therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is on greenfield land but outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H191: The Sun Inn, 62 Barnsley Road, Flockton, Wakefield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of an employment node; therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 5 minutes travel time of a primary school and 21-25 minutes of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of a GP and within 56-60 minutes of a hospital. Therefore, this site is likely to have a minor positive effect on this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A637 (Barnsley Road) which could result in noise pollution which could affect residents over the longer term. Therefore a significant negative effect is likely. There are a number of existing residential properties within 100m to the north, south and south-east of the site. These receptors could be affected by noise and light pollution during construction and this reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 5 minutes travel time of a local centre and 16-20 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are several recreational facilities and areas of open space within 600m of the site, the closest of which is an area of semi-natural and natural greenspace approximately 80m north-east of the site. There are also outdoor sports facilities, other area of semi-natural and natural greenspace, amenity greenspace, allotments, a park and garden and areas for children and young people. In addition, there are a number of PRoW footpaths within 600m of the site and there is a byway adjacent to the southern end of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.65ha; therefore a minor positive effect is likely.
10. Secure an effective and	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.65ha) and on greenfield land, and therefore, a minor negative effect on this SA objective is likely. The site is also completely within grade 3 agricultural land and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.65ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There is one biodiversity designation within 1km of the site, this being Kirkby Wood candidate Local Wildlife Site which is approximately 500m south-east of the site. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside of flood zone 3, with the exception of a small section at the southern end of the site. Therefore a minor negative effect is likely as it may be possible to avoid developing this part of the site.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect is identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H192: Headfield Mills, Savile Road, Savile Town, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The southern part of this site is within 11-15 minutes travel time of an employment node whereas the northern part is within 21-25 minutes of an employment node. In between, journey times to employment nodes vary between those two extremes. Overall, a mixed effect is likely – potentially significant positive for the southern part of the site and minor positive for the northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The southern part of this site is within 6-10 minutes of a primary school and 11-15 minutes of a secondary school. The northern part is within 11-15 minutes travel time of a primary school and 26-30 minutes of a secondary school. In between, journey times to education nodes vary between those two extremes. Therefore, a minor positive effect is likely. Overall there is likely to be a mixed effect – potentially significant positive for the southern part and minor positive for the northern part.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 11-15 minutes travel time of a GP and within 26-30 minutes of a hospital. Therefore, this site is likely to have a minor positive effect. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to an industrial area which could result in noise pollution over the longer term. Therefore a significant negative effect is likely. There are a number of existing residential properties within 100m to the south and east of the site. These receptors could be affected by noise and light pollution during construction and this reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+/0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The southern part of this site is within 6-10 minutes travel time of a local centre and 11-15 minutes of a district/town centre. The northern part of the site is within 11-15 minutes of a local centre and 21-25 minutes of a district/town centre. In between, journey times to local services vary between those two extremes. Overall, a mixed effect is likely – potentially minor positive for the southern part of the site and negligible for the northern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are several recreational facilities and areas of open space within 600m of the site, the closest of which is an area of semi-natural and natural greenspace directly adjacent to the south of the site. There are also outdoor sports facilities, other areas of semi-natural and natural greenspace, amenity greenspace, a park and garden, a Local Nature Reserve, a green corridor and areas for children and young people. In addition, there are a number of PRow footpaths within 600m to the west of the site, and there is a national cycle route approximately 160m west of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.18ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.18ha) and on brownfield land, and therefore, a minor positive effect on this SA objective is likely. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is small (1.18ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There is one biodiversity designation within 1km of the site, this being Sparrow Wood approved Local Wildlife Site and Local Nature Reserve which is approximately 280m south-east of the site. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and mostly outside of flood zone 3, however a small section of the western end of the site falls within flood zone 3. Therefore a negligible effect is likely as it may be possible to avoid developing this part of the site.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land therefore a minor positive effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect is identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H193: Land north of Holme House, Oxford Road, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of an employment node and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The central to eastern part of the site is within 6-10 minutes of a primary school, 6-10 minutes of a secondary school and 21-25 minutes of a further education facility. The far western part of the site is within 16-20 minutes of a primary school, 16-20 minutes of a secondary school and 31-35 minutes of a further education facility. In between, journey times to education nodes vary between those two extremes. Overall, there is likely to be a mixed effect – potentially significant positive for the central to eastern part and minor positive for the far western part.
4. Improve the health of local	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The central to eastern part of the site is within 6-10 minutes of a GP and 41-45 minutes of a hospital. The far western part of the site is within 16-20 minutes of a GP and 51-55 minutes of a hospital. In between, journey times to health facilities vary between those two extremes. Overall, there is likely to be a mixed effect – potentially minor positive for the central to eastern part and negligible for the far western part. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A651 (Oxford Road) which could result in noise pollution over the long term on future residents. The M62 motorway is also approximately 120m north of the site which may contribute to this noise pollution. Therefore, a significant negative effect is likely. In addition, there are a number of residential properties within 100m to the west, south and east of the site, and these residents could experience noise and light pollution during construction which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The central to eastern part of the site is within 6-10 minutes of a local centre and 11-15 minutes of a town/district centre, whereas the far western end of the site is within 21-25 minutes of a local centre and a town/district centre. In between, journey times to local services vary between those two extremes. Overall there is likely to be a mixed effect – potentially minor positive for the central to eastern part of the site and minor negative for the far western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are several recreational facilities and areas of open space within 600m of the site, the closest of which is an area for children and young people and amenity greenspace which are approximately 280m south-east of the site. There are also additional areas for children and young people and outdoor sports facilities. In addition, there are a number of PRoW footpaths within 600m to the north, east and south of the site, and there are two bridleways to the north-west. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.84ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.84ha) and mostly on greenfield land, the majority of which is classed as grade 3 agricultural land. Therefore, a minor negative effect is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.84ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There is one biodiversity designation within 1km of the site, this being Oakwell Park approved Local Wildlife Site and Local Nature Reserve which is approximately 650m east of the site. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect is identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H194: Thistledome Farm, Lees Hall Road, Thornhill Lees

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Approximately half of this site is within 11-15 minutes travel time of the nearest employment node while the other half is within 16-20 minutes travel time; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Access to education varies across the site. The most accessible area is in the far north-east, which is within 6-10 minutes to a primary school and 11-15 minutes to a secondary school. The least accessible area is in the far south-western area which is within 11-15 minutes to a primary school and 16-20 minutes to a secondary school. In between, access to education facilities varies between these two extremes. However, overall a significant positive effect is expected.
4. Improve the health of local	++/+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is within 6-10 minutes travel time to a GP. Levels of access to hospitals vary throughout the site. The most accessible area for hospitals are in the far north western areas where travel times are within 26-30 minutes of a hospital, while the least accessible area for hospitals is in the south eastern area, where it is 51-55 minutes travel time to a hospital. However, in between, journey times to hospitals vary between those two extremes. Therefore, a mixed effect on this objective is expected – potentially significantly positive for the far north western area and potentially minor positive for the south eastern area. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties at the far north eastern area of the site on Lees Hall Road/ Ingham Road, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to vary throughout the site. The whole site is within 6-10 minutes travel time to a local centre. However, levels of access to town/district centres vary. The most accessible area to town/district centres is in the far north and north west, where the site is within 16-20 minutes, while the least accessible areas are in the south and lower south eastern areas, where journey times are within 26-30 minutes. In between journey times, vary between these two extremes. Therefore, overall a potentially negligible effect is likely for the whole site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>This site includes a public right of way (PRoW) which could be lost as a result of housing development. However, it is part of a much larger network of PRoWs outside the site, to the east of the boundary. There is also a local and national cycle path. Open space nearby includes six amenity green spaces, one park and garden, one green corridor and six areas of semi natural and natural greenspace, the closest being 130m east of the site, and incorporates provision for children and young people. Other areas include six outdoor sports facilities and an allotment. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
which meets their needs.		affordable housing. This site is large (12.75ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This site is large (12.75ha) and on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of the land has been designated as Grade 3 agricultural quality, aside from the far north eastern boundary which is designated as urban and the remaining eastern boundary which is Grade 4 agricultural quality.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This site is large (12.75ha) and on greenfield land; therefore, development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset.</p> <p>The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 645m of Sparrow Wood Local Nature Reserve and approved Local Wildlife site; therefore development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of four recreational facilities. There are three outdoor sports facilities, four amenity green space, one of which incorporates provision for children and young people and three public right of way (PRoW). A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.8ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site relatively small (0.8ha) and on brownfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is relatively small (0.8ha) and on brownfield land; therefore, development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 640m of Sunny Banks Pond Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	0	This site is on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objective 6: access to services. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H196 XL Joinery Ltd Bradford Road

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is almost entirely within 6-10 minutes travel time of the nearest employment node (although a very small area in the south west is within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 6-10 minutes travel time of both a primary and secondary school (although a small area in the west of the site is within 11-15 of a secondary school); therefore it is likely to have a significant positive effect. It is also within 6-10 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP (although a small area in the south west of the site is within 11-15 minutes). The site is also entirely within 26-30 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The northern boundary of this site is adjacent to the A651 (Bradford Road), which may mean that residents in the north of the site are affected by road noise. In addition there are industrial units adjacent to the west which may result in noise in that area. There are also existing residential properties within 100m of the site to the south and east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Most of this site is within 6-10 minutes travel time of a local centre (although a small area in the south west of the site is within 11-15 minutes). The site is also within 6-10 minutes travel time of a town/district centre. Overall, a minor positive effect is therefore likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of	++	This site is within 600m of more than three recreational facilities. There are three public rights of way (PRoW) within 600m as well as two parks and gardens, four areas of amenity green space (one of which buffers the south eastern

SA Objectives	SA Score	Justification
new recreation facilities and areas of open space and encourage their usage.		edge of the site), a green corridor, two areas of semi natural and natural greenspace and an allotment. There are also five outdoor sports facilities and two sites containing provision for children and young people within 600m. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.59ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to all eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.59 ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a small site (1.59 ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity sites (Oakwell Park Local Nature Reserve is the closest site and is located approximately 1.2km to the north). As such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
waste close to source.		This site is on brownfield land; therefore a potential minor positive effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access all eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: health, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: local amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H197: Former Allotments Leeds Road, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 11-15 minutes travel time of a primary school and also within 11-15 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The majority of the site

SA Objectives	SA Score	Justification
		is also within 16-20 minutes of the nearest further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 16-20 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The site is bordered to the north by the A62. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is within 11-15 minutes travel time of a local centre. The site is also within 21-25 minutes travel time of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is in close proximity to a number of open spaces. A Local Nature Reserve is located within 435m to the south on Bright Street. The school playing fields on Slipper Lane provide access to outdoor sports facilities and are located within 360m to the south west of the site. Amenity greenspace is provided within 270m to the north west of the site on Commonsides. A footpath can be accessed at the most westerly corner of the site. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.65ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.65ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in relatively close proximity to the Sunny Bank Ponds site which has been designated as a Local Wildlife Site and Local Nature Reserve and is within 435m to the south. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H198: Land to the south of Second Avenue, Hightown

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The eastern part of this site is within 6-10 minutes travel time of the nearest employment node; however the western part of the site is 16-20 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Overall a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and also within 21-25 minutes travel</p>

SA Objectives	SA Score	Justification
		time of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 11-15 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the north on Second Avenue. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of the site is within 16-20 minutes travel time of a local centre. The majority of the site is also within 16-20 minutes travel time of a town/district centre; therefore a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+/--?	The site is on land which has been identified as an area of outdoor sport facilities and a semi-natural and natural greenspace. These identified open spaces could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Amenity greenspace can be accessed within 265 to the east of the site at Miry Lane. Outdoor sports facilities are provided within 210m to the north of the site at High Bank School. Amenity greenspace and a children's playground is accessible also to the north within 330m of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.59ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.59ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.59ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the nearby Thornbush Farm which is a Grade II Listed Building located within 100m to the south of the site. The effect on this SA objective is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Clifton Lagoon is the closest of such features but is located 1.83km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is located on mostly greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure (it should be noted that a mixed effect was recorded for this SA objective overall), 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted however that a mixed effect was recorded for this SA objective overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H199: Housing allocation H1.17, Queens Road West, Milnsbridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 26-30 minutes travel time of the nearest employment node; as such a minor positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school and also within 11-15 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The majority of the site</p>

SA Objectives	SA Score	Justification
		is also within 16-20 minutes of a further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP and within 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Manchester Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 11-15 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. A cemetery borders the site to the east and Coronation Park is directly to the west of the site. This park also provides access to a children's playground. A series of allotments are accessible to the south east of the site on Gramfield Road within 225m. The nearest footpath to the site can be accessed within 110m to the east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.67ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.67ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.67ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the former Church of St Luke and its vicarage. Both of these buildings are Grade II Listed Buildings and are within 40 metres of the site. The effect on this SA objective is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 110m of the Huddersfield Narrow Canal which has been identified as a candidate Local Wildlife Site to the north. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H200: Housing allocation H2.4, Mill Moor Road, Meltham

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 41-45 minutes travel time of the nearest employment node; as such a minor negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 11-15 minutes travel time of a primary school. The majority of the site is also within 26-30 minutes

SA Objectives	SA Score	Justification
		travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the east and west on Mill Moor Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes travel time of a local centre. The majority of the site is also within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. Within 110m to the north semi-natural and natural greenspace is located by Meltham Dike. Also along Meltham Dike located 325m to the north east of the site amenity greenspace and further semi-natural and natural greenspace is located. A cemetery is located within 550m to the east of the site on Mill Moor Road. Footpath access is provided within 205m of the site to the north east on Owl Bears Road.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site lies on land which has been identified as Grade 4 Agricultural Land. A small part of the site has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is within 500m of the Peak District National Park; therefore a potential significant negative effect on this SA objective is identified. This is a relatively small site (0.44ha) but is on greenfield land, which would further contribute to the potential negative effect. However, this is uncertain depending on the design of the development. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 850m of the South Pennine Moors which have been identified an SPA and SAC to the west. Dark Peak is also located within 850m to the west and has been designated as a SSSI. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H201: Housing allocation H8.59, Laund Road, Lindley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 11-15 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is within 11-15 minutes travel time of a primary school. The majority of the site is also within 31-35 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP and within 11-15 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on Laund Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces. The site is bordered to the north by public laying fields which provide access to outdoor sports facilities. A children's playground is provided at the most north easterly corner of these playing fields. Further outdoor sports facilities can be accessed within 45m to the west of the site on Laund Road. A park can be accessed on Hubert Street within 165m of the site to the south west. An additional children's playground is located within the aforementioned park.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.82ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.82ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.82ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in relatively close proximity to Old Lindley Moor, Huddersfield which has been designated as a Local Geological Site and is within 460m to the north west. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H202: Housing allocation H8.60, New Hey Road, Salendine Nook

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 6-10 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school. The site is also within 21-25 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 5 minutes travel time of a GP and within 11-15 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered to the south by the A640. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 5 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity of a number of open spaces. The site is bordered to the west by a cemetery on Laund Road. A park including a children's playground is accessible within 240m of the site to the east via New Hay Road (the A640). Further open space is provided on the southern side of the A640; public playing fields are accessible to the south within 25m and provide access to outdoor sports facilities as well as an additional children's playground. Beyond this to the south west an allotment is located within 135m of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.61ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.61ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.61ha) on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Salendine Nook Baptist Church a Grade II Listed Building which is located to the west of the site. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in relatively close proximity to Longwood Edge Quarry, Huddersfield which has been designated as a Local Geological Site and is within 540m to the west. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is located mostly on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 6: access to local services, 8: recreation and leisure, 10: transport and 19: climate change and significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H203: Thornfield, Prospect Lane, Birkenshaw

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 11-15 minutes travel time of a primary school. The site is also within 11-15 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The majority of the site is within 26-30 minutes of the nearest further education centre.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the east and west on The Beeches and Bradford Road respectively. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 16-20 minutes travel time of a local centre. The majority of the site is also within 16-20 minutes travel time of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity of a number of open spaces. The site is bordered to the north by a cemetery. Further north of the cemetery within 105m of the site is a small park which includes a children's playground. Within 110m to the north west of the site a public bowling green is located off Bradford Road and provides access to outdoor sport facilities. An allotment is located within 260m to the north east of the site to the rear of Station Lane. A footpath can be accessed within 85m to the east of the site along Prospect Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to</p>

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.41ha) on mostly brownfield land; therefore a minor positive effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.41ha) on mostly brownfield land; therefore development here could have a minor positive effect on this SA objective given redevelopment of a brownfield site will most likely result in an improvement of its overall character and appearance. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the St Paul's Church a Grade II Listed Building which is adjacent to the site to the north. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Tong Moor is the closest of such features but is located 1.05km to the north and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located mostly on brownfield land meaning any development would be unlikely to result in a sizeable increase in the area of impermeable surfaces in Kirklees. The site is also not located on land identified as being within Flood Zone 3; therefore a negligible effect is likely on this SA objective.
17. Increase prevention, re-use, recovery and recycling	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is located mostly on brownfield land; therefore a minor positive but uncertain effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H205: Land to the east of Slipper Lane, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 31-35 minutes travel time of the nearest employment node; as such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. SA Objectives	SA Score	Justification
		the site is within 11-15 minutes of the nearest further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 11-15 minutes travel time of a GP and within 56-60 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to an existing residential property to the south on Slipper Lane as well being within 10m of those properties which are on the west side of Slipper Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 11-15 minutes travel time of a local centre. The site is also within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity of a number of open spaces. The site is bordered to the south by the school playing fields which provide access to outdoor sports facilities. Two children's playgrounds are located to the south east of the site within 155m and 225m respectively. Within 430m to the east of the site a Local Nature is located by Bright Street.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.41ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.41ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.41ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Sunny Bank Ponds which is located to the east within 430m. This area has been designated as a Local Nature reserve as well as a Local Wildlife Site. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H206

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 21-25 minutes travel time of the nearest employment node (a small part of the site to the east is located within 26-30 minutes travel time of the nearest employment node); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is located within 11-15 minutes travel time of a primary school (a small part of the site to the north west is located within 6-10 minutes travel time of a primary school). The site is also located within 16-20 minutes travel time of a secondary school. A significant positive effect is expected on this SA objective. The site is located within 21-25 minutes travel time of a centre for further education (a small part of the site to the south is located within 26-30 minutes travel time of a centre for further education).
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 16-20 minutes travel time of a GP (a small part of the site to the north east is located within 11-15 minutes travel time of a GP). The majority of the site is located within 41-45 minutes travel time of a hospital (a small part of the site to the north east is located within 46-50 minutes travel time of a hospital). Overall a negligible effect is likely on this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development to the west on Towngate Grove, to the north east on Dunbottle Lane, to the east on Dunbottle Close and Pinfold Close, and to the south on Pinfold Lane. As such development at this location would be in close proximity to existing sensitive receptors on all sides meaning there is potential for negative impacts on local amenity during any construction phase which is required. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel time of a local centre. The majority of the site is located within 16-20 minutes travel time of a town/district centre (part of the site to the north is located within 11-15 minutes travel time of a town/district centre); therefore negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	++	The site is located within close proximity of a number of designated open spaces which may be used by new residents in the area. A cemetery is located within 25m of the site by Dunbottle Way to the east. Outdoor sports facilities are located within the grounds of Castle Hall Academy within 100m to the west of the site. Further outdoor sports facilities are located at Mirfield Parish Church Cricket Club within 255m of the site on Dunbottle Lane to the north west. As such

SA Objectives	SA Score	Justification
space and encourage their usage.		a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.5ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. Although this site is currently in the process of being developed it was previously a greenfield site and for the purpose of this assessment is recognised as such. The site is relatively small (0.5ha) however and is on land which is classified as urban. As such a minor negative effect is expected on this SA objective.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.5ha) which is currently in the process of being developed. As such for the purposes of this assessment given that the site was previously a greenfield site it is recognised as such. Development of housing at this location could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not located within close proximity of any designated biodiversity features. The closest biodiversity or geodiversity site is to the south east at Whitley Wood which has been designated as a Local Wildlife Site within 1.25km. As such a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	Prior to the start of development at this location this site was a greenfield site. The site is located outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land will increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Prior to the start of development at this location this site was a greenfield site; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: open space, 10: sustainable transport and 19: climate change and potential significant negative effects were identified in relation to SA objective 5: local amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H208: Land at Grove Street, Longwood

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 31-35 minutes travel time of the nearest employment node; as such a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	+?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school. The majority of the site is also within 36-40 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP. The majority of the site is within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north west on Grove Nook. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The part of the site is on land which has been identified as an area of semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. 50m to the north east of the site amenity greenspace is provided on Longwood Gate. A cemetery is accessible within 170m of the site to the south east. Outdoor sports facilities can be accessed within 80m to the south of the site. Within 80m to the north of the site allotments are accessible on Prospect Road. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of</p>

SA Objectives	SA Score	Justification
which meets their needs.		affordable housing. This site is relatively small (1.27ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.27ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (1.27ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the south within 915m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H210: Hanging Heaton Golf Course, Leeds Road, Hanging Heaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 6-10 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The site is within 6-10 minutes travel time of a primary school. The site is also within 21-25 minutes travel time of a secondary school. A minor positive effect is therefore likely on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP. The site is also within 26-30 minutes travel time of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south west on Caulms Wood Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The site is also within 11-15 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which has been identified as an outdoor sports facility; which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Adjacent to the site to the east amenity greenspace (woodland) is located. Beyond this location to the east a park and children's playground are provided within 30m of the site. Further outdoor sports facilities can be accessed within 200m of the site to south at the school's playing fields.</p> <p>A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.35ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.35ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.35ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is adjacent to Caulms Wood Quarry, Dewsbury to the north west and this area has been designated as a Local Geological Site. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is located on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation and leisure (it should be noted that mixed effects were identified for this SA objective overall) 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that mixed effects were identified for this SA objective overall). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H211: Land to the east of Newgate, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 16-20 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school. The majority of the site is also within 16-20 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective.</p>

SA Objectives	SA Score	Justification
		The majority of the site is also within 16-20 minutes travel time of the nearest further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP. The majority of the site is also within 36-40 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is adjacent to Foldhead Mills which currently accommodates at least one industrial company. As such it is expected that locating housing at this site could expose new residents to undue levels of noise pollution and a significant negative effect is recorded for this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. To the north east within 75m a small park is located on Station Road by the public library. A children's playground is located within 70m to the south of the site on Huddleston Court. The Ings Grove Park to the north of the site within 150m of the site on Huddersfield Road also provides access to a children's playground, amenity greenspace and semi-natural and natural greenspace at one location.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.49ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.49ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.49ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective given redevelopment of a brownfield site will most likely result in an improvement of its overall character and appearance. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. The former lock keeper's cottage within the site, the flood lock at Newgate Bridge, and St Paul's Church which are all in close proximity to the site have been identified as Grade II Listed Buildings which may be impacted upon by development at the site in this situation. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is located within 750m of Briery Bank Wood which has been designated as a Local Wildlife Site to the south east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
soil pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on brownfield land; it is also located in an area which has been designated as being within Flood Zone 3. As such although development at this site would not result in an increase in impermeable surfaces within Kirklees it would increase the number of homes at risk of potential flooding and as such a minor negative effect is recorded for this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on brownfield land; therefore a minor positive but uncertain effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H213: Black Rock Mills, Waingate, Linthwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 41-45 minutes travel time of the nearest employment node; as such a minor negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school. The majority of the site is also within 11-15 minutes travel time of a secondary school. A significant positive effect is therefore likely on this SA objective. The site varies in its proximity to the nearest further education centre. The northern part of the site is within 26-30 minutes travel time from the nearest further education centre, while the southern part of the site is within 26-40 minutes travel time from the nearest further education centre with travel times varying from these two extremes at locations in between.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP. The site varies in its proximity to a hospital. The most northern part of the site is within 46-50 minutes of the nearest hospital while the most southern part of the site is within 56-60 minutes travel time of the nearest hospital. The locations in between these two extremes have variable travel times to the nearest hospital. The site is not within or adjacent to an AQMA. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north east on Waingate. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be

SA Objectives	SA Score	Justification
of crime.		influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site contains a footpath which may be lost as a result of the development of housing at this location and therefore a potential significant negative is recorded for this objective. The site is however also in close proximity to a number of open spaces which could be used by residents. To the north west adjacent to the site a cemetery, outdoor sports facilities (tennis courts), a small park and amenity greenspace are all provided. Further amenity greenspace and provision for young people and children is made within 110m to the east of the site on The Ridgeways. The school playing fields on Gillroyd Lane provide access to further outdoor sports facilities within 320m to the east of the site. The closest allotment to the site is located within 195m to the north on Causeway Side. A footpath runs along the north eastern edge of the site to Waingate in the north.</p> <p>As such a mixed overall effect (significant positive/potential significant negative) is recorded on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.17ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	++	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.17ha) on mostly brownfield land; therefore a significant positive effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural Land Classification.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively large site (6.17ha) on mostly brownfield land; therefore development here could have a minor positive effect on this SA objective given redevelopment of a brownfield site will most likely result in an improvement of its overall character and appearance. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>

SA Objectives	SA Score	Justification
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could impact on a designated heritage asset but that its development is unlikely to result in harm to that asset if the development accords with the anticipated Local Plan policies for managing change to the historic environment. 18 and 21 Waingate are Grade II Listed Buildings which are all in close proximity of the site may be impacted upon by development at the site in this situation. A minor negative effect on this SA objective is therefore likely although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 585m of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the north. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is located on brownfield land and as such development at this location would not result in an increase in impermeable surfaces within Kirklees and therefore not contribute to the potential for flooding in the District. A negligible effect is recorded for this SA objective. The site is not located on land which has been identified as being within Flood Zone 2 or 3.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly brownfield land meaning opportunities may exist for the reuse of existing materials of buildings; therefore a minor positive but uncertain effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (however the overall effect on this SA objective was recorded as mixed), 9: housing, 10: transport, 11: land use, and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (however the overall effect on this SA objective was recorded as mixed). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H214: Land west of New Mill Road, Thongsbridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 36-40 minutes travel time of the nearest employment node; as such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (a very small part of the site to the south is within 11-15 minutes travel time of a primary school). The majority of the site is also within 6-10 minutes travel time of a secondary school (a very small part of the site to the south is within 11-15 minutes travel time of a</p>

SA Objectives	SA Score	Justification
		secondary school). A significant positive effect is therefore likely on this SA objective. The majority of the site is within 31-35 minutes of the nearest further education centre (a very small part of the site to the north is within 36-40 minutes of the nearest further education centre).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a very small part of the site to the north is within 11-15 minutes travel time of a GP). The majority of the site is also within 51-55 minutes travel time of a hospital (a small part of the site to the south is within 56-60 minutes travel time of a hospital). The site is not within or adjacent to an AQMA. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered to the east by the A635 (New Mill Road/Station Road). Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre (the south part of the site is within 11-15 minutes travel time of a local centre). The site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. To the west of the site within 5m a semi-natural and natural greenspace is located. Beyond this greenspace to the west are outdoor sports facilities which are within 60m of the site. Sands Recreation Area to the north west of the site within 10m is designated as a park or garden and also provides access to a children's playground. A bridleway runs parallel to Bramble Bank within 15m to the east of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.65ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.65ha) on mostly greenfield land (only the southern part of the site appears to have been developed); therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land to the south and as Grade 4 Agricultural Land to the north.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.65ha) on mostly greenfield land (only the southern part of the site appears to have been developed); therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hagg Wood (a Candidate Local Wildlife Site) is the closest of such features but is located 1.33km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield (only the southern part of the site appears to have been previously developed) land meaning opportunities to reuse material already onsite will be reduced; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H215: Land to the north of Edgerton Road, Edgerton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The southern part of the site is within 6-10 minutes of the nearest employment node while the northern part of the site is within 16-20 minutes travel time of the nearest employment node. The area between these two extremes is within 11-15 minutes travel time of the nearest employment node. Overall a significant positive effect is expected on this SA

SA Objectives	SA Score	Justification
		objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The northern part of the site is within 5 minutes of the nearest primary school while the southern part of the site is within 11-15 minutes travel time of the nearest primary school. The area between these two extremes is within 6-10 minutes travel time of the nearest primary school. The majority of the site is within 26-30 minutes travel time of the nearest secondary school (a small part of the site to the north west is within 31-35 minutes travel time of the nearest secondary school). Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a small part of the site to the east is within 11-15 minutes travel time of a GP). The northern part of the site is located within 31-35 minutes travel time of a hospital while the southern part of the site is within 16-20 minutes travel time of a hospital. Between these two extremes travel times from different parts of the site to a hospital vary. Overall a mixed effect (minor positive/significant positive) is identified on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered to the south by the A629 (Edgerton Road). Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. <p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health (overall a mixed effect was expected for this SA objective) 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H216: Land at Shop Lane, Kirkheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 36-40 minutes travel time of the nearest employment node (with an area to the south east within 31-35 minutes); therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school and within 31-35 minutes of a secondary school so is likely to have a minor positive effect. The site is also within 31-35 minutes of a further education institute.</p>
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of a GP (although an area on the northern edge is within 5 minutes) and within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is surrounded by a number of existing residential properties which could be affected by noise during the construction phase. In addition, there appears to be industrial areas immediately to the north and south west of the site. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 5 minutes travel time of a local centre (although an area to the east is within 6-10 minutes) and within 11-15 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is approximately 110m from public playing fields which include an area of Children's play provision to the west and approximately 140m from a Bowling green and allotments. There is also a park and gardens which includes a children's play area approximately 280m to the north. There are two more areas of playing field and an area of amenity greenspace within 600m north of the site. A Central Kirklees Cycling Map route is also within 20m of the site. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.67ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or</p>

SA Objectives	SA Score	Justification
		entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.67ha) on brownfield land; therefore a minor positive effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (1.67ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 700m from Dalton Bank Local Nature Reserve and 950m Round Wood, Tandem Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is outside of flood zones 2 and 3. Therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
Potential significant positive effects were identified for this site in relation to SA objectives 6: local services, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H218: Land to the east of Bluehills Farm, Whitehall Road West, Birkenshaw, Bradford

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to an employment node vary throughout this site. The eastern part of this site is within 21-25 minutes travel time of the nearest employment node whereas the western part of the site is 31-35 minutes away from employment. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the eastern part and potentially negligible for the western part.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of a primary school (although a section to the east is within 11-15 minutes) and within 11-15 minutes of a secondary school (although a section to the east is within 6-10 minutes) so is likely to have a minor positive effect. The majority of the site is also within 31-35 minutes of a further education institute (although a section to the east is within 26-30 minutes).</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+ / 0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. This eastern part of the site is within 11-15 minutes travel time of a GP and within 41-45 minutes of a hospital however, the western part of the site is within 21-25 minutes from a GP and within 56-60 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the eastern part and potentially negligible for the western part. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>--</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is not surrounded by housing however the eastern boundary is adjacent to both an Ambulance Service HQ and Fire Service HQ which may result in noise pollution affecting residents in the longer-term. The south western boundary of the site is also within 50m of the M62 motorway and the southern boundary is adjacent to the A58 (Whitehall Road West) which may mean that residents in those parts of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>0 / -</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. This eastern part of the site is within 11-15 minutes travel time of a local centre and within 16-20 minutes of a town/district centre however, the western part of the site is within 21-25 minutes from a local centre and within 26-30 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially negligible effect for the eastern part and potentially minor negative effect for the western part.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced</p>

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath which runs just inside the north western boundary of the site and could be lost or disrupted as a result of housing development. However, the remainder of the footpath runs adjacent to the northern and western boundaries of the site. There is another PRoW footpath within 5m north of the site and a footpath within 20m north west of the site. The site is approximately 340m from a school's playing fields and 350m from a Children's play area to the east. The site is also approximately 440m from an area of semi-natural & natural greenspace, 500m from a bowling green and 540m from a park and gardens which includes children's play provisions to the north east. There is a bridleway approximately 180m south of the site however it runs through another housing site option. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.3ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.3ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.3ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Oakroyd Hall Fire Services HQ building on Oakroyd Drive which is a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation (part of a mixed effect), and potential significant negative effects were identified in relation to SA objective 5: amenity and 8: Leisure and recreation (as part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H220: Land south of Nabbs Lane, Slaithwaite

SA Objectives	SA Score	Justification
1: Increase the number and	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Almost all of this site is within 26-30 minutes travel time of the nearest employment node (although a tiny area in the south west corner is within 31-35 minutes); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of a primary school and the majority of the site is within 11-15 minutes of a secondary school (although an area in the west is within 16-20 minutes) so is likely to have a significant positive effect. Almost all of this site is also within 31-35 minutes of a further education institute (although a small area on the eastern edge is within 26-30 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 5 minutes travel time of a GP (although the north western corner is within 6-10 minutes) and within 36-40 minutes of a hospital (with a small area in the south western corner within 41-45 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties in close proximity to the north of the site which may be affected by noise during the construction phase. There is also an industrial area immediately to the south west of the site which could result in noise pollution affecting residents in the longer-term. The site is also within 60m of a railway line to the north which may mean that residents in the northern part of the site are affected by railway noise. A significant negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre (although a small section to the north west is within 11-15 minutes) and within 5 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 30m from a national cycle route to the north west. The site is also approximately 80m from semi-natural & natural greenspace to the north. The site is approximately 230m from school playing fields and 320m from semi-natural & natural greenspace in the south as well as 350m from allotments in the south east, however there is a river and a canal between the site and the facilities which makes them less easily accessible by foot. Approximately 270m to the north of the site is an area of private playing fields, 390m to the north east is an area of park and gardens that includes a children's play area and 340m north west of the site is an area of school playing fields. In addition, approximately 155m south west of the site is a PRoW footpath and other footpath is located 290m south east of the site however it runs through another housing site option. These footpaths are also less easily accessible by foot as there is a canal separating them from the site. Also, there is a sports centre approximately 540m to the east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.47ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. 		within 31-35 minutes of a further education institute (although a small section on the south western edge is within 26-30 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This majority of the site is within 6-10 minutes travel time of a GP (although the south eastern corner is within 5 minutes) and within 36-40 minutes of a hospital (although a small area in the south is within 41-45 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties surrounding the site to the north which may be affected by noise during the construction phase. The site is also approximately 40m from a railway line to the north which may mean that residents in the northern part of the site are affected by railway noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of the site is within 11-15 minutes travel time of a local centre (although a small section in the south within 6-10 minutes) and within 5 minutes travel time of a town/district centre (although a small section to the south within 6-10 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 120m from a national cycle route to the north west. The site is also approximately 70m from semi-natural & natural greenspace to the north. The site is approximately 220m from school playing fields and 360m from semi-natural & natural greenspace in the south as well as 430m from allotments in the south east, however there is a river and a canal between the site and the facilities which makes them less easily accessible by foot. Approximately 300m to the north of the site is an area of private playing fields, 430m to the north east is an area of park and gardens that includes a children's play area and 230m north west of the site is an area of school playing fields. In addition, approximately 30m south west of the site is a PROW footpath. Therefore, a significant positive effect is expected for this objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.87ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.87ha) with the majority on greenfield land therefore a minor negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban and a small section of grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.87ha) with the majority on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA F4: Colne (Slaitthwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on The Manor House on Church Street which is a Grade II* Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to the Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H222: POL, Piling Lane, Scisset, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The eastern part of this site is within 5 minutes travel time of the nearest employment node whereas the western part of the site is 11-15 minutes away from employment. In between the far eastern and western parts of the site, journey times to an employment node vary in between those two extremes however overall significant positive effect is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The eastern part of the site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. The north western part of this site is within 11-15 minutes of a primary school and 21-25 minutes of a secondary school. In between those areas journey times to primary and secondary facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the eastern part and potentially minor positive for the north western part. Travel times to a further education institute also vary across the site – 11-15 minutes in the east and 21-25 minutes in the west.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ /0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The eastern and southern edges of the site are within 5 minutes travel time of a GP and within 46-50 minutes of a hospital however, the western part of the site is within 16-20 minutes from a GP and within 56-60 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the eastern part and potentially negligible for the western part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north and east of the site which may be affected by noise during the construction phase. The northern boundary of the site is also adjacent to a railway line which may mean that residents in the northern part of the site are affected by railway noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ +/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. This eastern part of the site is within 5 minutes travel time of a local centre and within 5 minutes of a town/district centre however, the western part of the site is within 16-20 minutes from a local centre and within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is</p>

SA Objectives	SA Score	Justification
		expected – potentially significant positive effect for the eastern part and potentially negligible effect for the western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a bridleway and three PRoW footpaths within the site which could be lost or disrupted as a result of housing development. However, the site is adjacent to public playing fields which include a children's play area to the south. The site is also approximately 180m from school playing fields and 200m from semi-natural & natural greenspace to the south. Scissett Baths Sports centre is also 140m to the south of the site. To the east of the site within 600m there are four areas of park and gardens and two children's playgrounds. In addition, there is a PRoW footpath that runs adjacent to part of the southern boundary of the site and within 95m north of the site are two PRoW footpaths and a bridleway. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+ +	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (9.44ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+ +	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (9.44ha) on greenfield land therefore a significant negative effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (9.44ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees.

SA Objectives	SA Score	Justification
		This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 225m from the Park Gate Dyke Local Wildlife Site, approximately 370m the Riding Wood Local wildlife to the south east approximately 490m from the Blacker Wood Local Wildlife Site to the west and approximately 615m from Cliffe Woods Park Quarry, Clayton West Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services, 8: leisure and recreation (part of a mixed effect), 9: affordable housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H223: Land north of Royd House Lane, Linthwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of the site is within 36-40 minutes travel time of the nearest employment node (although an area to the north is within 31-35 minutes); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of the site is within 6-10 minutes travel time of a primary school (with a small section in the south east within 11-15

SA Objectives	SA Score	Justification
		minutes); however access to secondary schools varies throughout the site. Parts of the site in the north and south are within 6-10 minutes of a secondary school however an area in the centre of the site is within 16-20 minutes of a secondary school. In between those areas, journey times to secondary schools vary in between those two extremes. However, overall there is likely to be a significant positive effect for the whole site. The majority of the site is also within 21-25 minutes of a further education institute (with a small area in the north within 16-20 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes travel time of a GP (although a small area in the north east is within 11-15 minutes); however access to a hospital varies throughout the site. The northern edge of the site is within 36-40 minutes of a hospital whereas a small area in the south is within 46-50 minutes. Overall, a minor positive effect is likely for the whole site. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties in close proximity to the north, west and south of the site which may be affected by noise during the construction phase. Part of the site is also adjacent to the A62 (Manchester Road (Linthwaite)) to the north which may mean that residents in the northern part of the site are affected by road noise in the longer term. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++/0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local services and facilities vary throughout this site. The south western corner of the site is within 5 minutes travel time of a local centre and within 6-10 minutes of a town/district centre however, a small area in the central eastern part of the site is within 6-10 minutes from a local centre and within 16-20 minutes of a town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – significant positive for the south western corner and negligible for the area in the central eastern part of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++/--?	The eastern boundary of the site encroaches on an area of semi-natural & natural greenspace, which could be lost as a

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		result of housing development. However, the site is also approximately 160m from an area of park and gardens that includes children's play provision and 190m from private playing fields to the south east. Approximately 55m from the site there is an area of allotments and approximately 90m from the site is an area of amenity greenspace both to the south west. There is golf course situated approximately 490m to the south of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.66ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (6.66ha) with the majority being greenfield land therefore a significant negative effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (6.66ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaitwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on several Grade II Listed buildings to the south of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 230m from Low Westwood Pond Local Wildlife Site and approximately 250m from Huddersfield Narrow Canal Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: local services and facilities (part of a mixed effect), 8: leisure and recreation (part of a mixed effect overall), 9: affordable housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation (part of a mixed effect overall), 11: use of land, 12: character, and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H224: Cemex, Bridge Street, Birstall, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties surrounding the site to the south and east which may be affected by noise during the construction phase. The site is also adjacent to industrial areas to the west and north. The northern part of the site is also in close proximity to the A62 (Huddersfield Road) which may mean that residents in the northern part of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes of a local centre (although a small area in the south west is within 11-15 minutes) and within 5 minutes travel time of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 90m from an area of amenity greenspace to the north, 160m from a green corridor/pedestrian/cycleway to the north east and 300m from a park an area of park and gardens. To the south the site is approximately 350m from an area of private playing fields and an area of semi-natural & natural greenspace and approximately 450m from an area of public playing fields. Within 530m to the east of the site there are two areas of amenity greenspace, one of which contains a children's play area. Approximately 400m to the north east of the site there is an area of amenity greenspace which adjoins and area of semi-natural & natural greenspace. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.5ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.5ha) with the majority on brownfield land therefore a minor positive effect on this SA objective is likely. The majority of the site is not within high quality agricultural land (is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.5ha) with the majority on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 970m from the Oakwell Park Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	0	This site is on brownfield land and the majority of the site is outside of flood zones 2 and 3 (a small section to the north is within flood zone 3). Therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access all eight of the features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H225: Land west of Abbey Road, Shepley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 16-20 minutes travel time of the nearest employment node (although a small area to the east is within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (with a small section in the east within 5 minutes) and within 26-30 minutes of a secondary school (although a small section to the east is within 21-25 minutes) so is likely to have a minor positive effect. The majority of the site is also within 31-35 minutes of a further education institute (although a small section to the east is within 26-30).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP (although a small section to the east is within 6-10 minutes) and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties to the east of the site which may be affected by noise during the construction phase; therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes of a local centre (although a small area in the east is within 5 minutes) and within 21-25 minutes travel time of a town/district centre (although a small area to the east is within 16-20 minutes); therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	The site is approximately 340m from an area of school playing fields which is adjacent to an area of amenity greenspace

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		and 450m from an area of amenity greenspace to the north. There are two more areas of amenity greenspace which lie within 450m to the north west of the site. Approximately 595m north east of the site lies an area of semi-natural & natural greenspace. In addition, there is a bridleway that runs adjacent to the western boundary of the site. There is another bridleway and a PRow footpath within 130m north of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.79ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.79ha) on greenfield land therefore a minor positive effect on this SA objective is likely. The site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.79ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 75m from the Gelder Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate	-	This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access four of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H226: Land south of Hightown Road, Hightown

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 21-25 minutes travel time of the nearest employment node (although a small area to the north is within 16-20 minutes); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 11-15 minutes travel time of a primary school (with a small section in the north within 6-10 minutes) and within 16-20 minutes of a secondary school (although a small section to the north is within 11-15 minutes) so is likely to have a significant positive effect. The majority of the site is also within 26-30 minutes of a further education institute (although a small section to the south is within 31-35).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The northern part of the site is within 5 minutes travel time of a GP and within 46-50 minutes of a hospital however, the southern part of the site is within 11-15 minutes from a GP and within 51-55 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. However, overall a minor positive effect is likely for this objective for the whole site. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties in close proximity to the north and west of the site which may be affected by noise during the construction phase; therefore a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local services and facilities vary throughout this site. The northern part of the site is within 11-15 minutes travel time of a local centre and within 6-10 minutes of a town/district centre whereas the southern part of the site is within 16-20 minutes of both a local centre and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive effect for the northern part and potentially minor negative effect for the southern part.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW footpath which runs just inside the southern boundary of the site and could be lost or disrupted as a result of housing development. However, there is a bridleway that runs adjacent to the south eastern boundary and a bridleway and footpath are within 5m north east of the site. The site is approximately 10m from an area of private playing fields, 200m from a green corridor/pedestrian/cycleway (containing a national cycle route) and 225m of an area of semi-natural & natural greenspace which includes a children's play area to the east. Approximately 280m to the south of the site is an area of public playing fields which includes a children's play area (approximately 440m from the site). There is also an area of semi-natural & natural greenspace approximately 250m to the west of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.29ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (2.29ha) on greenfield land therefore a minor positive effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (2.29ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend

SA Objectives	SA Score	Justification
		on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access five of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to the SA objective 8: leisure and recreation (mixed effect).		

H227: Land south of Fenay Lane, Fenay Bridge

SA Objectives	SA Score	Justification
1: Increase the number and	++	While the location of housing sites will not influence the number, location or type of employment opportunities

SA Objectives	SA Score	Justification
range of employment opportunities available for local people, and ensure that they are accessible.		available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time to a primary school and 16-20 minutes to a secondary school; therefore it is likely to have a significant positive effect. It is also within 11-15 minutes to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time to a GP. The site is also within 36-40 minutes to a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the north-east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time to a local centre and within 11-15 minutes to a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several public rights of way (PRoW), the closest being 250m from the site and one local cycle route. Open space nearby include one green corridor, five areas of semi natural and natural greenspace, three amenity green spaces and a park and garden. Other areas include two outdoor sports facilities and six sites containing provision for children and young people. A significant positive effect is therefore identified
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.77ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.77ha) on mainly brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a small site (1.77 ha) mainly on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on Castle Hill Scheduled Monument, Fenny Hall Grade II* and two Grade II Listed Buildings; Fenny Bridge Nursery and listed stable block at Fenny Hall. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 1km of three designated biodiversity features; Almondbury Common Local wildlife site and Wakefield Road and Carr Wood Candidate Wildlife Sites, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas	0	This site is mainly on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
and ensure development does not contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on brownfield land; therefore a potential minor positive effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: Climate change and potential significant negative effects were identified in relation to SA objectives. No significant negative effects were identified in relation to any of the SA objectives.		

H228: Land south of Greenhill Bank Road, New Mill

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Most of this site is within 51-55 minutes travel time of the nearest employment node (although a small area in the north east is within 46-50 minutes); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Approximately half of this site is within 6-10 minutes travel time to a primary school while the other half is 5 minutes and the whole site is within 21-25 minutes to a secondary school; therefore it is likely to have a minor positive effect. It is also within 51-55 minutes to a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	The location of housing sites will not affect the number or location of healthcare facilities; however, where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 26-30 minutes travel time to a GP. The site is over 60 minutes to a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the north which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time to a local centre and within 16-20 minutes to a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are four footpaths within walking distance, the closest being directly adjacent to the northern boundary of the site. Open spaces nearby include an area of amenity greenspace, an area of semi natural and natural greenspace, and a park and garden, which includes provision for children and young people. Other areas include two outdoor sports facilities and two allotment sites. A significant positive effect is therefore identified
9. Ensure all people are able to live in a decent home which	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of

SA Objectives	SA Score	Justification
meets their needs.		affordable housing. This site is small (0.51ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.51 ha); therefore a minor negative effect on this SA objective is likely. The site is designated as Grade 4 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.51 ha) mainly on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Holme House Grasslands Local Wildlife Site is the closest of such features but is located approximately 1.4km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfeild land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
waste close to source.		This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 1: employment. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H229: Land west of Clough Road, Slaithwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to employment vary throughout the site. The most accessible area is in the centre and south, which is within 36-40 minutes travel time to an employment node. The least accessible area is in the far north of the site which is over 60 minutes travel time to an employment node. Journey times between these two extremes vary. Therefore, a mixed effect on this objective is expected – negligible effect for the centre and south of the site and significant negative effect for the far north area of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		Levels of access to education facilities vary throughout the site. The most accessible area is in the centre and south, which is within 6-10 minutes travel time to a primary school and 16-20 minutes to a secondary school. The least accessible area is in the far north of the site which is over 60 minutes travel time to both a primary and secondary school. Therefore, a mixed effect on this objective is expected – significant positive affect for the centre and south of the site and significant negative effect for the far north.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout the site. The most accessible area is in the centre and south, which is within 6-10 minutes travel time to a GP and 46-50 minutes to a hospital. The least accessible area is in the far north of the site which is over 60 minutes to both a GP and a hospital. Therefore, a mixed effect on this objective is expected – minor positive affect for the south of the site and significant negative effect for the far north. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties within 100m of the site (mainly to the west) which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local centres and town/district centres vary throughout the site. Therefore, a mixed effect on this objective is expected – minor positive affect for the centre and south of the site and significant negative effect for the far north of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and	++/--?	This site includes public rights of way (PRoW) which could be lost as a result of housing development. However, the site is also within 600m of a much larger network of PRoWs outside the site, the closest being approximately 60m away. Amenity greenspaces nearby include an area of semi natural and natural greenspace, a park and garden, which

SA Objectives	SA Score	Justification
areas of open space and encourage their usage.		includes provision for children and young people and an allotment. Other areas include two outdoor sports facilities and the Colne Valley Leisure Centre. A mixed (significant positive and potentially significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.65ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.65 ha) on mainly greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the land is classified as urban, aside from a small area in the north which is Grade 4 agricultural quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.65 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on Wood End Farmhouse, which is a Grade II* Listed Building, 12-13 Rock Lane and the group of buildings around Wood End Farm to the south-east of this site, which are all Grade II Listed Buildings. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 1km of two fragments of the Huddersfield Narrow Canal candidate Local Wildlife Site, the closest being approximately 720m south of the site. Clough Head Quarry Local Geological Site is also within 1km to the north. A minor negative effect is therefore possible in relation to this SA objective although this is uncertain as there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is mainly on greenfield land and is mainly outside flood zone 3 (although a tiny area along the western boundary of the site is just within flood zone 3); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education (part of a mixed effect overall), 8: leisure and recreation part of a mixed effect overall), 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to services and 8: leisure and recreation (in all cases these significant negative effects were part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H231: Land North of Dewsbury Road, Gomersal

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The south eastern part of this site is within 11-15 minutes travel time from the nearest employment node, while an area of the northern part of the site is within 21-25 minutes. Journey times therefore vary in between these two extremes, with the majority of the site within 16-20 minutes travel time of the nearest employment node. A mixed effect on this objective is expected – significant positive in the majority of the site (main part of site and

SA Objectives	SA Score	Justification
		south eastern) and minor positive in the northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary, with the remaining part within 6-10 minutes. The majority of the site is also within 11-15 minutes travel time of a secondary school, while the north western part is within 6-10 minutes and the south eastern is within 16-20 minutes. Therefore despite the variances in travel time a significant positive effect is likely on the objective. The site is also within 30 minutes of a further education facility, which contributes to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (with the remaining south eastern part within 6-10 minutes) and the whole site is within 41-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The northern site boundary is adjacent to the M62 while the south western boundary is directly adjacent to the A652 which may mean that residents in these parts of the site are affected by road noise. There are also a number of residential properties within 100m of the site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of a local centre, with the exception of the eastern area which is 16-20 minutes travel time. The north eastern part of the site is within 21-25 minutes of a</p>

SA Objectives	SA Score	Justification
		town/district centre, while a small part on the eastern boundary is within 6-10 minutes. In between, journey times vary between these extremes. A mixed effect is therefore likely – minor positive in the small eastern part and negligible in the majority of the rest of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is partially bisected by a Public Right of Way, which could be lost as a result of housing development. However the site is within 600m of a number of open spaces, including an area of amenity greenspace and children's playground, both approximately 15m to the south west of the site. In addition there is a public park approximately 88m to the south east of the site, with an area of allotments and a further area of amenity greenspace both lying to the north, approximately 525m and 570m from the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.09ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this whole site was classed as 'green' in terms of its access to four of the eight of the features assessed. For a further two features the majority of the site was classed as 'green'. Therefore a significant positive effect on this objective is expected.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (7.09ha) on greenfield land, the majority of which is classified as of Grade 3 agricultural quality; therefore a significant negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (7.09ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 78m from the Oakwell Park Local Nature Reserve; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this whole site was classed as 'green' in terms of its access to four of the eight of the features assessed. For a further two features the majority of the site was classed as 'green'. Therefore a significant positive effect on this objective is expected.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 9: housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 11: land use, 12: landscape character and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H232: Land West of Bradshaw Road, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 26-30 minutes travel time of the nearest employment node with the exception of a small area in the south eastern corner which is within 31-35 minutes travel time; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary and 16-20 minutes of a secondary school (with the exception of a small area in the south eastern corner of the site which is 21-25 minutes travel time from a secondary school) a significant positive effect is likely. It is also within 25 minutes of a further education institute which will contribute to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 51-55 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is not surrounded by existing residential development however there are a number of residential properties within 100m, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and the majority of the site is within 6-10 minutes of a town/district centre (the remainder of the site is within 11-15 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 600m of a number of open spaces, including an area of amenity greenspace approximately 373m to the north of the site and a public playing field approximately 505m to the north west. In addition there is a Public Right of Way approximately 66m to the south west of the site. A significant positive effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.67ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed and as 'green' for the majority of a fifth feature assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.67ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.67ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for</p>

SA Objectives	SA Score	Justification
		Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 780m from the Holmroyd Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four of the eight features assessed and as 'green' for the majority of a fifth feature assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives.		

H233: Land North of Barnsley Road, Denby Dale

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ +/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people’s ability to access jobs.</p> <p>The northern part of this site is within 16-20 minutes travel time from the nearest employment node, while an area of the southern part of the site is within 41-45 minutes. In between, journey times vary in between these two extremes. A mixed effect on this objective is expected – significant positive in the northern part of the site and minor negative in the southern part.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 16-20 minutes travel time of a primary school (although the northern part is within 11-15 minutes travel time) and within 26-30 of a secondary school (although the northern part is within 21-25 minutes travel time). A negligible effect is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents’ health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (although the northern part is within 6-10 minutes travel time) and the whole site is more than an hour travel time from a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The southern boundary of this site is directly adjacent to the A635 (Barnsley Road) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the site, particularly to the north, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of both a local centre and a town/district centre (although an area to the south and west is within 16-20 minutes travel time of both); therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including three areas of semi natural and natural greenspace which are located directly to the north east of the site, approximately 162m to the north west and approximately 171m to the north. In addition, there is an existing Public Right of Way running adjacent to the western site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.12ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.12ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.12ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>This site is more than 1km from any designated biodiversity site; therefore development here could have a negligible effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. SA Objectives	SA Score	Justification
		or mainly 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity and 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H234: Land South of Wessenden Head Road, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 51-55 minutes travel time of the nearest employment node (although a small area to the north east is within 56-60 minutes travel time); therefore a significant negative effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary (although a small area to the north east is within 16-20 minutes travel time) and within 31-35 minutes of a secondary school (although the southern part is within 26-30 minutes travel time). A minor positive effect is therefore likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes travel time of a GP (although an area to the north west is within 16-20 minutes travel time) and more than an hour from a hospital (although an area to the north east is within 56-60 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.

SA Objectives	SA Score	Justification
		This site not surrounded by existing residential development; however there are a number of sensitive receptors within 100m, to the north and east of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 31-35 minutes travel time of a local centre (although an area to the north west is within 26-30 minutes travel time) and the whole site is within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including allotments approximately 172m to the east of the site and an area of semi natural and natural greenspace approximately 592m to the north. In addition, there is an existing Public Right of Way (PRoW) running adjacent to the southern site boundary and a second PRoW approximately 57m to the north. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.48ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively small site (2.48ha) on greenfield land; however the south eastern site boundary is directly adjacent to the border of the Peak District National Park.</p> <p>Considering the close proximity of this designated landscape to the development and thus the potential for detrimental impact on the National Park a significant negative effect is likely, although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument on Royd Edge and Upper Colders Farmhouse, a Grade II Listed Building. The loss of this area and its subsequent development could harm elements which contribute to the significance of these building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 873m from the South Pennine Moors, which are a designated SPA, SAC and SSSI and 977m from the South Pennine Moors Local Geological Site; therefore development here could have a minor negative effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	<p>While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.</p>

SA Objectives	SA Score	Justification
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
<p>Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 1: employment and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H235: Land east of Pinfold Lane, Lepton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+/-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The northern part of this site is within 46-50 minutes travel time of the nearest employment node; however a small area in the southern part is within 26-30 minutes travel time. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive in the southern part of the site and minor negative in the northern part of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary (although a small area to the west is within 6-10 minutes travel time) and 41-45 minutes travel time of a secondary school (although an area along the southern boundary is within 36-40 minutes travel time). A minor positive effect is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital; therefore a minor</p>

		positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site not surrounded by existing residential development, however there are a number of residential within 100m of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>This site is bisected by a Public Right of Way, which could be lost as a result of housing development. However the site is within 600m of at least four other footpaths, with one running directly adjacent to the north and east, along the site boundaries. There is also a bridleway approximately 390m to the north west of the site. There is a playing field located approximately 172m from the site but as this is private it has not been included in this assessment. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.4ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.4ha) on greenfield land; therefore a minor negative effect on this SA objective is</p>

		likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.4ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 895m from the Lepton Great Wood candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in</p>

terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.

Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation and a potential significant negative effect was also identified in relation to SA objective 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

H236: Land South of Cliffe Street, Clayton West

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 6-10 minutes travel time of the nearest employment node (with the exception of a small area adjacent to the western boundary which is within 11-15 minutes travel time); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school. The majority of the site is also within 21-25 minutes travel time of a secondary school (with the exception of a small area to the north of the site which is within 16-20 minutes travel time). A minor positive effect on this SA objective is therefore likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This whole site is within 11-15 minutes travel time of a GP and the majority is within 56-60 minutes of a hospital (although an area to the south is more than an hour travel time from a hospital); therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of residential</p>

SA Objectives	SA Score	Justification
		properties within 100m of both the northern and eastern site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of a local centre (although the eastern part is within 5 minutes travel time) and within 11-15 minutes of a town/district centre (although the western part is within 6-10 minutes travel time); therefore a minor positive effect is likely on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site partially comprises of a public park and also a bowling green, which could be lost as a result of housing development. However, it is also directly adjacent to an area of semi-natural and natural greenspace, within 10m of a public park to the north west and 128m to a recreation ground to the north east. In addition there is a Public Right of Way approximately 35m to the south of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.61ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.61ha) on greenfield land, the majority of which is classified as being of Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.61ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site partially comprises of an area of Cliffe Woods Park Quarry, a Local Geological Site, which could be lost as a result of housing development. It is also approximately 218m from the Riding Wood Local Wildlife Site and 209m from the Riding Wood candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10:		

SA Objectives	SA Score	Justification
sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H237: Land South of Carrs Road, Marsden

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 36-40 minutes travel time of the nearest employment node (although an area in the south is within 41-45 minutes); therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 5 minutes travel time of a primary school (although an area in the south of the site is within 6-10 minutes) and the whole site is within 21-25 minutes travel time of a secondary school, so the site is likely to have a minor positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 5 minutes travel time of a GP (although an area in the south of the site is within 6-10 minutes) and the whole site is within 51-55 minutes of a hospital; therefore a minor positive effect is likely. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of residential properties within 100m of both the north eastern and south western site boundaries, which may be affected by noise during the construction phase. There are also a number of properties on the site which may be affected. A</p>

SA Objectives	SA Score	Justification
		minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 16-20 minutes travel time of a local centre (although a very small area in the west of the site is within 11-15 minutes) and most of the site is within 5 minutes of a town/district centre (although a small area in the south of the site is within 6-10 minutes); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space, including a playing field and public park, both approximately 10m to the north west, a children's playground approximately 40m to the south west and an area of semi-natural and natural greenspace approximately 35m to the north east. A Public Right of Way is also directly adjacent to a section of the southern site boundary and runs the length of the eastern boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.94ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.94ha) on mainly greenfield land (though the site does include some existing residential properties in the central and eastern area); therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.94ha) on mainly greenfield land (though the site does include some existing residential properties in the central and eastern area); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
		<p>The site is just out with 500m of the Peak District National Park and so is not considered to be within 'close proximity'.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts. This site lies within the Marsden Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 504m from the South Pennine Moors, a designated SAC, SSSI and SPA and approximately 832m from Butterley Cutting, a Local Geological Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (though the site does include some existing residential properties in the central and eastern area) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>The majority of this site is on greenfield land (though the site does include some existing residential properties in the central and eastern area); therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and

		<p>the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
<p>Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives.</p>		

H238: Land South of Ash Lane, Emley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is more than an hour travel time from the nearest employment node; therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is more than an hour travel time from both a primary and secondary school so is likely to have a significant negative effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is more than an hour travel time from both a GP and a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p>

SA Objectives	SA Score	Justification
		This site is not surrounded by existing residential development; however there are a number of existing residential properties within close proximity to the south west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is more than an hour travel time from both a local centre and a town/district centre; therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+	This site is within 600m of one area of open space, located approximately 544m to the east of the site. In addition, there is a Public Right of Way directly adjacent to the southern and eastern boundary. A minor positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.36ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as mainly or entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.36ha) on greenfield land, which is classified as Grade 3 agricultural land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.36ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
		<p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on a series of medieval ironstone pits, a designated a Scheduled Monument located approximately 600m from the site. In addition development of this site would bring housing to within 50 metres of the Grade II Listed Buildings at White Cross Farm. The loss of this area and its subsequent development could harm elements which contribute to the significance of these building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity site; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as</p>

SA Objectives	SA Score	Justification
		mainly or entirely 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
Summary of SA findings: No potential significant positive effects were identified for this site in relation to any of the SA objectives. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to services, 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H239: Land North of Bretton Street, Savile Town, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 16-20 minutes travel time of the nearest employment node (although a small area in the north of the site is within 21-25 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary school (although a small area in the north is within 16-20 minutes) and within 36-40 minutes of a secondary school (although the same small area in the north is within 41-45 minutes); therefore a minor positive effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The northern part of this site is within 16-20 minutes travel time of a GP and within 41-45 minutes of a hospital, however the south western part is within 6-10 minutes travel time of a GP and 31-35 minutes of a hospital. In between, journey times to both vary between these two extremes. A mixed effect is therefore likely – negligible in the northern part of the site and minor positive in the south western part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction

SA Objectives	SA Score	Justification
		<p>phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is almost wholly surrounded by industrial development and the western edge is adjacent to a railway line, which is likely to have a significant negative effect in relation to noise over the long term. In addition, a small area to the north of the site is adjacent to a number of residential properties, which may mean that those residents may be affected by noise during the construction phase.</p>
6. Retain and enhance access to local services and facilities.	-/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to services and facilities vary throughout this site. The northern part of this site is within 21-25 minutes travel time of a local centre, whereas the south western part is within 11-15 minutes. The northern part of the site is also within 21-25 minutes travel time of a town/district centre, with the remaining area within 16-20 minutes. In between, journey times vary between these extremes. A mixed effect is therefore likely – minor negative in the northern part of the site and negligible in the remainder.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including two public playing fields (located approximately 75m to the north west and approximately 230m to the north east), an area of informal open space approximately 172m to the north west and an area of 'other' open space located adjacent to part of the western site boundary. There is also a public footpath which runs along the eastern side of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.06ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
11. Secure the efficient and prudent	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use

SA Objectives	SA Score	Justification
use of land.		of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.06ha) on brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This site is on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the bridge over the Calder and Hebble Navigation, which is a Grade II Listed structure. A minor negative effect on this SA objective is therefore possible, although the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 423m from the Sparrow Wood Local Wildlife Site and Local Nature Reserve; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	0	This site is on brownfield land and is almost entirely outside of flood zones 2 and 3 (although a small area near the eastern boundary is classified as Flood Zone 2); therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect may be likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.

SA Objectives	SA Score	Justification
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H240: Land south of Drub Lane, Drub, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 5 minutes travel time of an employment node and therefore, a significant positive effect is likely.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 41-45 minutes travel time of a primary school and within 51-55 minutes of a secondary school. Therefore, a significant negative effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site is within 41-45 minutes of a GP and more than 60 minutes from a hospital. Therefore, a significant negative effect is likely for this SA objective. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New</p>

SA Objectives	SA Score	Justification
light pollution.		residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m to the west, south and east of the site, and these residents could experience noise and light pollution during construction. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 41-45 minutes travel time of a local centre and 56-60 minutes of a town/district centre. Therefore, a significant negative effect is likely for this site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is crossed by a PRoW which could be lost or disrupted if this site is developed. However, there are several areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden which is approximately 280m south-east of the site. There are also areas for children and young people and another park and garden. In addition, there are a number of PRoW footpaths within 600m to the north and south of the site, as well as two bridleways to the north-west and north-east. Therefore a mixed effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.98ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.98ha) and on greenfield land, the majority of which is classed as grade 3 agricultural land. Therefore, a minor negative effect is likely.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.98ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two biodiversity designations within 1km of the site, these being Hunsworth Great Wood and Little Wood candidate Local Wildlife Site which is approximately 650m north-west of the site, and Hanging Wood candidate Local Wildlife Site which is approximately 970m north-west. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure (part of a mixed effect overall). Potential significant negative effects were identified for SA objectives 3: education, 4: health, 6: local services and 8: recreation and leisure (part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H241: Land south of Whitehall Road, Scholes, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ +/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The southern part of this site is within 11-15 minutes travel time of an employment node, whereas the north-western and north-eastern corners are more than 60 minutes travel time from an employment node. In between, journey times to employment nodes vary between those two extremes. Overall, a mixed effect is likely – potentially significant positive for the southern part of the site and significant negative for the north-western and north-eastern corners.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The far south-western corner of this site is within 6-10 minutes travel time of a primary school, 5 minutes of a secondary school and 11-15 minutes of a further education facility. The north-western and north-eastern corners are more than 60 minutes travel time from any education facilities. Overall, a mixed effect is likely – potentially significant positive for the south-western part and significant negative for the north-western and north-eastern part.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The far south-western part of this site is within 6-10 minutes of a GP and 41-45 minutes of a hospital. However, the north-western and north-eastern parts of the site are more than 60 minutes from a GP and a hospital. In between, journey times to health services vary between those two extremes. Overall, a mixed effect is likely – potentially minor positive for the southern-western part and significant negative for the north-western and north-eastern parts. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The M62 motorway is directly adjacent to the east of the site, and the A58 (Whitehall Road) is directly adjacent to the north of the site. This could result in noise pollution over the long term on future residents, and a significant negative is therefore likely. In addition, there are a number of residential properties within 100m to the south and west of the site, and these residents could experience noise and light pollution during construction, which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+ +/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The far south-western part of this site is within 5 minutes of a local centre and 6-10 minutes of a town/district centre, whereas the north-western and north-eastern parts of the site are more than 60 minutes from a local centre and town/district centre. of a local centre and 21-25 minutes of a town/district centre. In between, journey times to local services vary between those two extremes. Overall there is likely to be a mixed effect – potentially significant positive for the south-western part and significant negative for the north-western and north-eastern parts.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is crossed by a PRoW which could be lost or disrupted if this site is developed. However, there are several recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a cemetery which is directly adjacent to the west of the site. Others include parks and gardens, allotments and outdoor sports facilities. In addition, there are a number of PRoW footpaths within 600m to the south of the site, as well as two bridleways. Therefore, overall a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+ +	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 20.65ha; therefore a significant positive effect is likely.
10. Secure an effective and	+ +	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (20.65ha) and on greenfield land which is classified as being grade 3 agricultural quality; therefore a significant negative effect for this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (20.65ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are three biodiversity designations within 1km of the site, these being Hanging Wood candidate Local Wildlife Site which is approximately 740m north-east of the site, Hunsworth Great Wood and Little Wood candidate Local Wildlife Site which is approximately 820m north-east and Hanging Wood approved Local Wildlife Site which is approximately 750m north-east. Therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 6: local services, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects are identified for SA objectives 1: employment, 3: education, 4: health, 6: local services, 8: recreation and leisure, 11: use of land (part of a mixed effect overall) and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H242: Land east of Peep Green Road, Hartshead, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 6-10 minutes travel time of an employment node, and therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a further education facility, and most of the site is within 11-15 minutes travel time of a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The whole if this site is within 16-20 minutes travel time of a GP and within 41-45 minutes travel time of a hospital. Therefore, this site is likely to have a negligible effect on this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is within 100m of a number of residential properties, and there is a school within 100m to the east. These receptors could experience increased noise and light pollution during construction, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole site is within 6-10 minutes of a local centre and 26-30 minutes of a town/district centre. Therefore, a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and open space areas within 600m of this site, the closest of which is an outdoor sports facility which is directly adjacent to the north of the site. Others include additional outdoor sports facilities, a cemetery, and an area for children and young people. In addition, there are a number of PRoW footpaths within 600m to the north and west of the site. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.44ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is small (0.44ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. In addition, the whole site is on land which is classed as grade 3 agricultural land, and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.44ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There have been no significant negative effects identified for this site.		

H243: Land south of Drub Lane, Drub, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is mostly within 5 minutes travel time of an employment node, and therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 41-45 minutes travel time of a primary school and 51-55 minutes of a secondary school. Therefore, a significant negative effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 41-45 minutes travel time of a GP and more than 60 minutes travel time of a hospital. Therefore, this site is likely to have a significant negative effect on this SA objective. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is within 100m of a number of residential properties which are located to the west and north. These receptors could experience increased noise and light pollution during construction, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole site is within 41-45 minutes of a local centre and 51-55 minutes of a town/district centre. Therefore, a significant negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	A PRoW footpath crosses this site and it is possible that this may be lost or disrupted due to the development of the site. However, there are a number of recreational facilities and open space areas within 600m of this site which could be used by residents, the closest of which is a park and garden which is approximately 170m west of the site. Others include an additional park and garden and areas for children and young people. In addition, there are a number of PRoW footpaths within 600m to the north and south of the site, and there is a PRoW bridleway to the north. Therefore, an overall mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 3.66ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (3.66ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. In addition, the site is mostly on land which is classed as grade 3 agricultural land, and this reinforces the negative effect.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (3.66ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is within 1km of one biodiversity designation this being Hunsworth Great Wood and Little Wood candidate Local Wildlife Site which is approximately 670m north-west. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

Most of this site is within 6-10 minutes travel time of a GP. The site is also completely within 41-45 minutes travel time of a hospital. Therefore, this site is likely to have a minor positive effect on this SA objective. The site is not within or

SA Objectives	SA Score	Justification
		adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is within 100m of a number of residential properties which are located to the west. These receptors could experience increased noise and light pollution during construction, which results in a minor negative effect. There are also some industrial buildings associated with Blackwater Reservoir to the south-west which reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole site is within 6-10 minutes of a local centre and mostly within 6-10 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site, the closest of which is a park and garden approximately 450m north-west of the site. Others include an outdoor sports facility and an area for children and young people. In addition, there are a number of PRoW footpaths within 600m to the south, east and north-west and there is a national cycle route to the west. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.76ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.76ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.76ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There have been no significant negative effects identified for this site.		

H245: Land south of Penistone Road, Shelley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is completely within 11-15 minutes travel time of an employment node, and therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school, and the majority of the site is within 21-25 minutes of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 11-15 minutes travel time of a GP and the whole site is within 41-45 minutes travel time of a hospital. Therefore, this site is likely to have a minor positive effect on this SA objective. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A629 (Penistone Road) which could result in future residents being exposed to noise pollution over the longer term. This results in a significant negative effect. In addition, this site is within 100m of a number of residential properties which are located to the north, east and south. These receptors could experience increased noise and light pollution during construction, and this reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole site is within 6-10 minutes of a local centre and mostly within 21-25 minutes of a town/district centre. Therefore, a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site, the closest of which is an area of amenity greenspace which is approximately 90m north of the site. Others include outdoor sports facilities, semi-natural and natural greenspace, additional amenity greenspace and areas for children and young people. In addition, there are a number of PRoW footpaths surrounding the site, one of which is directly adjacent to the east of the site. This also corresponds with a bridleway. Therefore, a significant positive effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 2.17ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (2.17ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The whole site is also on grade 3 agricultural land, which reinforces the negative effect.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (2.17ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Gelder Wood candidate Local Wildlife Site is directly adjacent to the south of the site and therefore, a significant negative effect is likely. In addition Upper and Lower Stone Woods, Stocksmoor Local Geological Site is approximately 735m west of the site.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H246: Land west of Gomersal Road, Heckmondwike

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is mostly within 21-25 minutes travel time of an employment node, and therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Most of this site is within 11-15 minutes travel time of a primary school and 21-25 minutes of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is completely within 11-15 minutes travel time of a GP and mostly within 31-35 minutes travel time of a

SA Objectives	SA Score	Justification
social care they need.		hospital. Therefore, this site is likely to have a minor positive effect on this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A651 (Oxford Road) which could result in future residents being exposed to noise pollution over the longer term. This results in a significant negative effect. In addition, this site is also surrounded by existing residential properties, and during construction, these residents could be exposed to noise and light pollution. This reinforces the significant negative effect.
6. Retain and enhance access to local services and facilities.	-/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The south-western corner of this site is within 11-15 minutes of a local centre and 41-45 minutes of a town/district centre. The north-eastern corner is within 21-25 minutes of a local centre and 41-45 minutes of a town/district centre. In between, journey times to local services vary between those two extremes. Therefore, a mixed effect is likely - minor negative for the south-western part of the site and significant negative for the north-eastern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a PRoW running through this site which could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden approximately 130m south of the site. Others include outdoor sports facilities, amenity greenspace, other parks and gardens, and areas for children and young people. In addition, there are a number of PRoW footpaths surrounding the site, and a bridleway is directly adjacent to the north of the site. Therefore, a mixed effect is likely.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 6.34ha; therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This site is large (6.34ha) and on greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is mostly outside grade 3 agricultural land, although the north-western end of the site is on grade 3 land, however it is acknowledged that it may be possible to avoid developing this area of this site.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This site is large (6.34ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could avoid damage to Bar House Grade II Listed Building to the east of the site provided that proposed Local Plan policies to protect the historic environment are implemented. The effect on this SA objective is therefore likely to be minor negative although this is uncertain. Uncertainty also exists as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure and 9: housing. Potential significant negative effects were identified for SA objectives 5: amenity, 6: local services and amenities, 8: recreation and leisure and 11: use of land. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H247: Land east of Oxford Road, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 16-20 minutes of an employment node, therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The western part of this site is within 5 minutes of a primary school, 6-10 minutes of a secondary school and 11-15 minutes of a further education facility. The central to northern part of the site is within 6-10 minutes of a primary school, 11-15 minutes of a secondary school and 26-30 minutes of a further education facility. In between, journey times to education facilities vary between those two extremes. Although accessibility varies across the site, both the western and central to northern extremes score as significant positive.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The western part of this site is within 5 minutes of a GP and 31-35 minutes of a hospital, whereas the north-eastern corner is within 6-10 minutes of a GP and 46-50 minutes of a hospital. In between, journey times to health services vary between those two extremes. Although accessibility varies across the site, both the western and north-eastern extremes score as minor positive. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A651 (Oxford Road) which could result in future residents being exposed to noise pollution over the longer term. This results in a significant negative effect. In addition, this site is also within 100m east of a number of residential properties, and Gomersal primary school is to the north. These receptors could be exposed to noise and light pollution during construction and this reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes of a local centre and 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	There is a PRoW running through this site which could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility which is directly adjacent to the west of the site. Others include additional outdoor sports facilities, amenity greenspace, semi-natural and natural greenspace, cemeteries and areas for children and young people. In addition, there are a number of PRoW footpaths to the north and west of the site. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 5.59ha; therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
modes of transport.		
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively large (5.59ha) and on greenfield land which is mostly classified as being grade 3 agricultural quality; therefore a significant negative effect for this SA objective is expected.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is relatively large (5.59ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the nearby Red House and Pollard Hall Grade II* Listed Buildings, and Gomersal Conservation Area. It is considered that the loss of this site and its subsequent development could harm elements which contribute to the significance these assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The only designated biodiversity site within 1km of this site is Oakwell Park Local Nature Reserve and approved Local Wildlife Site which is approximately 380m north. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity, 8: recreation and leisure and 11: use of land (part of a mixed effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H248: Land west of Gillroyd Lane, Linthwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node and therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of a primary school and 21-25 minutes of a further education facility. The majority of the site is also within 6-10 minutes of a secondary school, although a small area in the south-west is within 11-15 minutes. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The majority of this site is within 6-10 minutes of a GP (although the eastern end is within 11-15 minutes of a GP), and the whole site is within 51-55 minutes of a hospital. A minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north and east of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes of a local centre and a town/district centre (although the eastern end is within 11-15 minutes of a local centre and town/district centre). Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of amenity greenspace approximately 70m north of the site. Others include outdoor sports facilities, additional amenity greenspace, semi-natural and natural greenspace, cemeteries, allotments and areas for children and young people. In addition, there are a number of PRow footpaths surrounding the site, one of which is directly adjacent to the north. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 3.13ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (3.13ha) and on greenfield land meaning that there is likely to be a minor negative effect on this

SA Objectives	SA Score	Justification
		objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (3.13ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two biodiversity designations within 1km of this site, these being Low Westwood Pond candidate Local Wildlife Site (approximately 720m north) and Huddersfield Narrow Canal candidate Local Wildlife Site (approximately 830m north). Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified.		

H249: Land north of Birds Edge Lane, Birdsedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is more than 60 minutes travel time from an employment node and therefore a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The northern part of this site is within 6-10 minutes of a primary school and 31-35 minutes of a further secondary school, whereas the southern part of the site is within 21-25 minutes of a primary school and 41-45 minutes of a secondary school. In between, journey times to education facilities vary between those two extremes. Overall, a mixed effect is likely – potentially minor positive for the northern part and minor negative for the southern part.
4. Improve the health of local people and ensure that they can access the health and	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The northern part of this site is within 16-20 minutes travel time of a GP and more than 60 minutes from a hospital,

SA Objectives	SA Score	Justification
social care they need.		whereas the southern part is within 26-30 minutes travel of a GP and more than 60 minutes from a hospital. Although accessibility to health services varies between those two extremes, a minor negative effect is likely overall. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m east and north of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely. There is also a water treatment works directly adjacent to the west of the site which could result in noise pollution over the long term. This reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	-/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The northern part of this site is within 21-25 minutes travel time of a local centre and town/district centre, whereas the southern part of the site is within 31-35 minutes of a local centre and town/district centre. In between, journey times to local services vary between those two extremes. Overall, a mixed effect is likely - potentially minor negative for the northern part of the site and significant negative for the southern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden approximately 200m east of the site. Other areas include outdoor sports facilities and an area for children and young people. In addition, there are a number of PRoW footpaths to the east and there is a local cycling route to the south. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 5.75ha; therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as mainly or entirely 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is large (5.75ha) and on mostly greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is not located in an area of quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (5.75ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA D9: Low Common, Royd Moor and Whitley Common, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently rising landform and is open, large scale and exposed. Woodland cover is sparse and there is strong rural character and important relative levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill (this site forms part of the area which contributes to the significance of this asset). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as mainly or entirely 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure and 9: housing. Potential significant negative effects were identified for SA objectives 1: employment, 6: local services (part of a mixed effect overall), 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H250: Land north of Manor Road, Farnley Tyas

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 41-45 minutes travel time of an employment node and therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The majority of this site is within 11-15 minutes of a GP (although sections at the northern and eastern ends are within 16-20 minutes) and within 51-55 minutes of a hospital (although a section at the southern end of the site is within 41-45 minutes of a hospital). A minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m south and south-west of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes of a local centre (although sections at the eastern and northern ends of the site are within 21-25 minutes of a local centre) and the whole site falls within 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace which is directly adjacent to the south of the site. Others include outdoor sports facilities, additional semi-natural and natural greenspace, a cemetery and an area for children and young people. In addition, there are a number of PRoW footpaths surrounding the site and a bridleway is directly adjacent to the north. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 3.76ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.76ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (3.76ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill and the Farnley Tyas Conservation Area (this site forms part of the area which contributes to the significance of these designations). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Woodview Meadows approved Local Wildlife Site (approximately 450m east), Carr Wood candidate Local Wildlife Site (approximately 800m north-west of the site), Carr Green Meadows approved Local Wildlife Site (approximately 900m north), Almondbury Common approved Local Wildlife Site (approximately 680m north) and Arthur, Molly Carr and Roaf Woods approved Local Wildlife Site (approximately 920m north-west). Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. H252: Land west of Farnley Road, Farnley Tyas

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 41-45 minutes travel time of an employment node and therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes of a GP (although the southern end is within 16-20 minutes) and within

SA Objectives	SA Score	Justification
social care they need.		51-55 minutes of a hospital (although a section at the northern end of the site is within 46-50 minutes of a hospital). A minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties and farmsteads within 100m east, north and west of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 16-20 minutes of a local centre and 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace which is directly adjacent to the west of the site. Others include outdoor sports facilities, additional semi-natural and natural greenspace, a cemetery and an area for children and young people. In addition, there are a number of PRow footpaths surrounding the site and a bridleway is to the north. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.56ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.56ha) and on brownfield land meaning that there is likely to be a minor positive effect on this

SA Objectives	SA Score	Justification
		objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This site is small (0.56ha) and on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Farnley Tyas Conservation Area (this site forms part of the area which contributes to the significance of the Conservation Area).</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two biodiversity designations within 1km of this site, this being Woodview Meadows approved Local Wildlife Site which is approximately 470m east and Hey Wood/West Wood candidate Local Wildlife Site which is approximately 860m west. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is on brownfield land and outside of flood zone 3, therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on brownfield land therefore a minor positive effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified.		

H253: Land west of Field Lane, Farnley Tyas

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 41-45 minutes travel time of an employment node and therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes of a secondary school. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes of a GP (although the northern tip is within 16-20 minutes) and the whole site is within 51-55 minutes of a hospital. A minor positive effect is likely for this SA objective. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties and farmsteads within 100m south and west of the site. These receptors could be exposed to noise and light pollution during construction, and as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes of a local centre (although the northern tip is within 21-25 minutes of a local centre) and the whole site is within 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace and an outdoor sports facility, both of which are directly adjacent to the south of the site. Others include additional areas of semi-natural and natural greenspace, additional outdoor sports facilities, a cemetery and an area for children and young people. In addition, there are a number of PRoW footpaths surrounding the site and a bridleway is directly adjacent to the east. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 1.2ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. This site is small (1.2ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the	-?	This site is small (1.2ha) and on greenfield land; therefore development here could have a minor negative effect on this

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill and Farnley Tyas Conservation Area (this site forms part of the area which contributes to the significance of these designations). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are three biodiversity designations within 1km of this site, these being Arthur, Molly Carr and Roaf Woods approved Local Wildlife Site which is approximately 780m north-west, Almondbury Common approved Local Wildlife Site which is approximately 750m north and Woodview Meadows approved Local Wildlife Site which is approximately 690m east. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified.		

H254: Land east of Thurstonland Road, Farnley Tyas

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 41-45 minutes travel time of the nearest employment node; therefore a minor negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 5 minutes travel time of the nearest primary school (the eastern part of the site is within 6-10 minutes travel time of the nearest primary school). The majority of the site is also within 11-15 minutes of the nearest secondary school (a small part of the site to the south west is within 16-20 minutes of the nearest secondary school). A significant positive effect is therefore expected on this SA objective. The site is within 31-35 minutes of the nearest further education centre.
4. Improve the health of local	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		<p>facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest GP surgery (small parts of the site to the north and south are within 11-15 minutes travel time of the site). The site is also within 51-55 minutes travel time of the nearest hospital. Overall a negligible effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Butts Close. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes travel time of a local centre (a very small part of the site to the west is within 21-25 minutes travel time of a local centre). The majority of the site is also within 11-15 minutes travel time of a town/district centre (a small part of the site to the south west is within 16-20minutes travel time of a town/district centre); therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 10m of amenity greenspace which also provides access to a children's playground to the west. A cemetery borders the site to the north along Butts Road. A semi-natural and natural greenspace is accessible via Manor Road within 220m to the north west of the site. A footpath is accessible to the eastern edge of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.37ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.37ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.37ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Farnley Tyas Conservation Area which the site borders well as Church of St Lucius to the north of the site which has been designated as a Grade II Listed Building. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 395m of the Hey Wood/West Wood which have been identified as a Candidate Local Wildlife Site to the west. Woodview Meadows Farnley Tyas is also located within 610m to the east and has been designated as a Local Wildlife Site. Arthur, Molly Carr and Roaf Woods are located within 980m to the north west of the site and have been designated as a Local Wildlife Site. The relative proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: recreation and leisure. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H255: Land south east of Arkenley Lane, Almondbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located more than 60 minutes travel time from the nearest employment node (a small part of the site to the north is within 31-35 minutes travel time of the nearest employment node); therefore a significant negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site located more than 60 minutes from the nearest primary school (the northern part of the site is within 16-20 minutes travel time of the nearest primary school). The south east of the site is located more than 60 minutes from the nearest secondary school while the north east of the site is located within 6-10 minutes of the nearest secondary school. Between these two extremes the travel time to the nearest secondary school varies. Overall a mixed effect is expected on this SA objective. A minor positive effect is expected on this SA objective for the north east of the site and a significant negative effect is expected for the south east of the site.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located more than 60 minutes travel time from the nearest GP surgery (a small part of the site to the north is within 16-20 minutes of the nearest GP). The majority of the site is also located more than 60 minutes travel time from the nearest hospital (a small part of the site to the north is within 41-45 minutes of the nearest hospital). Overall a significant negative effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north east on Millgate. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located more than 60 minutes travel time from a local centre (a small part of the site to the north is within 16-20 minutes travel time of a local centre). The majority of the site is also located more than 60 minutes travel time from a town/district centre (a small part of the site to the north is within 6-10 minutes travel time of a town/district centre); therefore a significant negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 160m of outdoor sports facilities which are provided at King James's School. To the south within 265m Woodsome Hall Golf Course provides further outdoor sports facilities. Amenity greenspace is provided within 470m to the north and a children's playground can also be accessed at this location.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.48ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.48ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.48ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Scheduled Monument at Castle Hill which is located in close proximity. This site forms part of the area of open countryside which contributes to the Scheduled Monument's setting and development at this location could harm elements which contribute to its significance.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 100m of the Almondbury Common which has been designated as a Local Wildlife Site to the south. Carr Wood is also located within 420m to the south and has been designated as a Candidate Local Wildlife Site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and the majority of it is outside of flood zones 2 and 3 (a very small part of the site to the south is located in flood zone 3); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objectives 1: employment, 3: education (it should be noted that the overall effect expected on this SA objective was recorded as mixed) 4: health, 6: access to local services and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H256: Land north of Woodsome Road, Fenay Bridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ +/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western part of the site is located more than 60 minutes travel time from the nearest employment node. The eastern part of the site is located within 11-15 minutes travel time from the nearest employment node. In between these extremes travel times to the nearest employment node are variable. As such the overall effect expected on this SA objective is mixed. At the eastern side a significantly positive effect is expected on this SA objective and on the western side a significantly negative effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The western part of the site is located more than 60 minutes travel time from the nearest primary school and the eastern part of the site is within 6-10 minutes travel time of the nearest primary school. Between these two extremes travel times to a primary school are variable. Similarly the western part of the site is located more than 60 minutes travel time from the nearest secondary school and the eastern part of the site is within 11-15 minutes travel time of the nearest secondary school. As such a mixed effect is expected on this SA objective overall. In the east a significant positive effect is expected on this SA objective and in the west a significant negative effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The western part of the site is located more than 60 minutes travel time from the nearest GP and the eastern part of the site is within 6-10 minutes travel time of the nearest primary school. Between these two extremes travel times to a GP are variable. Similarly the western part of the site is located more than 60 minutes travel time from the nearest hospital and the eastern part of the site is within 36-40 minutes travel time of the nearest hospital. As such a mixed effect is expected on this SA objective overall. In the east a minor positive effect is expected on this SA objective and in the west a significant negative effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New

SA Objectives	SA Score	Justification
light pollution.		residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the north on Millgate. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The western part of the site is located more than 60 minutes travel time from a local centre. The eastern part of the site is located within 6-10 minutes of a local centre. Areas between these two extremes are located within variable times of a local centre. The western part of the site is also located more than 60 minutes from the nearest town/district centre. The eastern part of the site is located within 11-15 minutes of the nearest town/district centre. Parts of the site which are between these two extremes are located within variable times of the nearest town/district centre. Overall a mixed effect is expected on this SA objective – significant negative for the western part and minor positive for the eastern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is located on land which provides for a bridleway from Woodsome Road. This public rights of way route could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Woodsome Hall Golf Club provides outdoor sports facilities adjacent to the site to the south. Further outdoor sports facilities are provided to the north west at King James's School within 130m of the site. A green corridor is located to the east of the site within 170m. Beyond this also to the west a semi-natural and natural greenspace is within 245m and can be accessed on Common End Lane. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (24.63ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.

SA Objectives	SA Score	Justification
		This is a relatively large site (24.63ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively small site (24.63ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The site is within 250m of the Almondbury Conservation Area. 70-76 Birks Lane are within 120m of the site to the north and have been designated as Grade II Listed Buildings. Fenny Hall (Grade II* Listed) and Woodsome Hall (Grade I Listed) are within 300m to the north and within 325m to the south of the site respectively.</p> <p>The effect on these historic assets and as such this SA objective is uncertain. The potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>The site is within 15m of most of Almondbury Common which is located to the south and has been designated as a Local Wildlife Site. A small part of the Common which is on the north side of Woodsome Road is within the boundary of the site. Carr Wood is also located to the south within 270m and has been designated as a Candidate Local Wildlife Site. The close proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land which would increase the area of impermeable surfaces in Kirklees. Additionally the northern edge and eastern edge of the site are located in Flood Zone 3. As such a significant negative effect is recorded for this SA objective.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, and 8: recreation and leisure (it should be noted that mixed effects were recorded for these three SA objectives) and potential significant negative effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: access to local services, 8: recreation and leisure (it should be noted that the overall effect expected on these five SA objectives was recorded as mixed), 10: transport, 11: land use, 12: landscape and townscape, 14: biodiversity and geodiversity, 16: flood risk and 19: climate change. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H257: Land west of Penistone Road, Fenay Bridge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The west of the site is located more than 60 minutes travel time from an employment node while the east of the site is located within 6-10 minutes travel time of an employment node. Areas between these extremes are located at variable travel times from an employment node. Overall a mixed effect (significant positive/significant negative) is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (21.44ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. Most of the site is located on land which has been identified as Grade 3 Agricultural Land (a same part of the site to the east is located on Urban Land).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (21.44ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment from any development which may result. This is due to the uncertain potential impacts on the Woodsome Hall which is within 240m to the north of the site and has been designated as a Grade I Listed Building. A number of Grade II Listed Buildings are in close proximity to Woodsome Hall. Additionally the site is within 2 miles of the Scheduled Monument at Castle Hill.</p>

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is within 220m of the Carr Wood which have been identified as a Candidate Local Wildlife Site to the west. Almondbury Common is located within 515m to the north west of the site and has been designated as a Local Wildlife Site. Lepton Great Wood is located within 590m to the east of the site and has been identified as a Candidate Local Wildlife Site. The southern part of Lepton Great Wood has been identified as a Local Geological Site. The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land through which Woodsome Beck runs. As such much of the eastern part of the site is within Flood Zone 2 and Flood Zone 3. Although it is not a large proportion of the site given its large size, the area which is within these Flood Zones is still quite sizeable. As such a significant negative effect is recorded for this SA objective as it is considered that siting development at this location may result in a significant number of houses being located within Flood Zone 3.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education (it should be noted however that mixed effects were recorded for these two SA objectives overall), 8: recreation and leisure and 9: housing and potential significant negative effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 5: amenity, 6: access to local services, (it should be noted that overall mixed effects were recorded for SA objectives 1, 3, 4 and 6) 8: recreation and leisure, 10: transport, 11: land use, 12: landscape and townscape, 14: biodiversity and geodiversity, 16: flood risk and 19: climate change. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H258: Land north of Northgate, Honley, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of the nearest primary school and within 6-10 minutes travel time of the

SA Objectives	SA Score	Justification
		nearest secondary school; as such a significant positive effect is expected on this SA objective. The site is also within 26-30 minutes travel time of the nearest further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of the nearest GP surgery. The majority of the site is also within 41-45 minutes travel time of the nearest hospital (the most westerly part of the site is within 36-40 minutes travel time of the nearest hospital). Overall a minor positive is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties on Northgate to the east and to the west. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 16-20 minutes travel time of a local centre (a small part of the site to the west is within 11-15 minutes travel time of a local centre). The site is also within 6-10 minutes travel time of a town/district centre; therefore a minor positive effect is likely on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 90m of a Local Nature Reserve which is to the north east. A cemetery is also accessible to the north west of the site within 275m. Hangstone Road provides access to allotments within 490m to the north west of the site. Footpaths are accessible along the north east and north west edges of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.16ha); therefore a minor positive effect is likely.
10. Secure an effective and	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
safe transport network which encourages people to make use of sustainable and active modes of transport.		transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.16ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.16ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity to a number of areas which have been designated due to their importance in terms of biodiversity. Upper Park Wood is within 80m to the north of the site and has been designated as a Local Wildlife Site and a Local Nature Reserve. Honley Station Cutting is located 110m to the east of the site and has been designated as a SSSI. The site is also in close proximity of another Local Wildlife Site, Arthur, Molly Carr and Roaf Woods to the north east which is within 750m and two Candidate Local Wildlife Sites (Hey Wood/West Wood 280m to the east and Park Wood 500m to the west). The proximity of the site to these designated biodiversity features may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H259: Land west of Brockholes Lane, Brockholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The northern part of the site is within 31-35 minutes travel time of an employment node. The southern part of the site is within 41-45 minutes travel time of an employment node. The area in between these extremes is within 36-40 minutes travel time of an employment node. Overall a mixed effect is expected on this SA objective: a negligible effect for the northern part of the site and a minor negative effect for the southern part of the site.
2. Achieve an economy better capable of growth through increasing	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA

SA Objectives	SA Score	Justification
investment, innovation and Entrepreneurship.		objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of the nearest primary school (a small part of the site to the north is within 11-15 minutes travel time of the nearest primary school) and within 11-15 minutes travel time of the nearest secondary school (a small part of the site to the south is within 6-10 minutes travel time of the nearest secondary school); as such a significant positive effect is expected on this SA objective. The majority of the site is also within 31-35 minutes travel time of the nearest further education centre (some of the north part of the site is located within 26-30 minutes travel time of the nearest further education centre).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The southern part of the site is within 11-15 minutes travel time of the nearest GP surgery. The north eastern part of the site is within 21-25 minutes travel time of the nearest GP surgery. The southern part of the site is also located within 51-55 minutes of the nearest hospital. Additionally the north western part of the site is located within 36-40 minutes travel time of the nearest hospital. The areas within the site between the highlighted extremes are located within variable travel times from their nearest GP surgery and hospital respectively. Overall a mixed effect on this SA objective is expected (ranging between minor positive and negligible effect).</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>The site is bordered to the south by a railway line. Given that siting residential development at this location may result in noise pollution affecting residents in the longer term a significant negative impact on this SA objective is expected.</p>
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The southern part of the site is within 6-10 minutes travel time of the nearest local centre. The north eastern part of the site is within 16-20 minutes travel time of the nearest local centre. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H260: Land north of Owler Lane, Birstall

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 21-25 minutes travel time of the nearest employment node (the western corner of the site is within 16-20 minutes travel time of the nearest employment node); as such a minor positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 11-15 minutes travel time of the nearest primary school. The majority of the site is also located within 21-25 minutes travel time of the nearest secondary school (the western corner of the site is located within</p>

SA Objectives	SA Score	Justification
		16-20 minutes travel time of the nearest secondary school). Overall a minor positive effect is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP (a portion of the western part of the site is within 6-10 minutes travel time of a GP) and within 46-50 minutes of a hospital (a portion of the eastern part of the site is within 51-55 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to an existing residential property to the east on Owler Lane as well as being adjacent to an industrial property on Field Head Lane to the west. As well as potential for noise during any construction period affecting the surrounding residential properties in the short term there is also potential for the new residential properties which result as part of any development proposed being impacted upon detrimentally by noise pollution from the industrial property nearby in the long term. As such a significant negative effect is therefore recorded for this SA objective.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 26-30 minutes travel time of a local centre as well as being within 16-20 minutes travel time of a town/district centre. As such a minor negative effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 10m of outdoor sports facilities which are provided at Fieldhead Primary Academy to the south. A large public park is accessible within 60m to the south west of the site on Field Head Lane. A green corridor is provided within 410m of the site also to the south west of the site. A children's playground is provide within 475m to the south east of the site and can be accessible via Haworth Road.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.47ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.47ha) on mostly brownfield land. Therefore a minor positive effect on this objective is expected. The site is on land which is classed as grade 3 agricultural land
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.47ha) on mostly brownfield land; therefore development here is expected to have a minor positive effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	The site is in close proximity to Oakwell Park which is within 185m to the south west and has been designated as Local Nature Reserve and a Local Wildlife Site. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	0	This site is located on mostly brownfield land and as such development at this location is unlikely to result in a sizeable increase in impermeable surfaces within Kirklees and therefore is not expected to contribute to the potential for increased flood risk in the District. A negligible effect is recorded for this SA objective. The site is not located on land

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		which is within flood zone 2 or 3.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of brownfield land meaning there may be increased opportunities to reuse material already onsite; therefore a minor positive effect is likely on this SA objective. The effect is recorded as uncertain as the availability of suitable materials on site may depend on its previous use.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H261: Land east of Brooklyn Road, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 11-15 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The site is also located within 11-15 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The site is also within 21-25 minutes of the nearest further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP (a portion of the southern part of the site is within 6-10 minutes travel time of a GP). The site is also within 31-35 minutes of a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on Brooklyn Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre as well as being within 11-15 minutes travel time of a town/district centre. As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++/--?	<p>An access route runs through the site and given that housing development at this location may result in its loss a potential significant negative is recorded. The site is also however in close proximity to a number of open spaces which could be used by residents. The site is within 160m of a semi-natural and natural greenspace which is located to the north east. Amenity greenspace is provided within 190m of the site to the south east on High Street. The nearest allotment to the site is within 330m to the south east on Valley Road. Civic space can be accessed on Albion Street to</p>

SA Objectives	SA Score	Justification
usage.		the south of the site within 410m. As such a mixed effect is recorded for this SA objective (significant positive/potential significant negative).
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.51ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.51ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land in terms of its Agricultural land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.51ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. Part of the site is within the boundaries of LCA G11: Batley Fringe Incised Valleys and part of the site lies in an area classed as 'industrial/business parks', as identified in the 2015 Landscape Character Assessment for Kirklees. LCA G11: Batley Fringe Incised Valleys is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hunsworth Great Wood and Little Wood are the closest of such features but is located 1.13km to the north west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is located on greenfield land and as such development at this location may result in an increase in impermeable surfaces within Kirklees and therefore may contribute to the potential for increased flood risk in the District. The site has also been identified as being within Flood Zone 3 and as such a significant negative effect is recorded for this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 16: flood risk. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H262: Land west of Hodgson Lane

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 26-30 minutes travel time of the nearest employment node (a small part of the site is located more than 60 minutes from the nearest employment node); as such a minor positive effect is expected on this SA objective.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest employment node (a small part of the site is located more than 60 minutes from the nearest employment node). The majority of the site is also located within 26-30 minutes travel time of the nearest secondary school (a small part of the site is located more than 60 minutes from the nearest secondary school). Overall a significant positive effect is expected on this SA objective. Overall a negligible effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of a GP (a portion of the site is located more than 60 minutes travel time from a GP). The majority of the site is also located more than 60 minutes from a hospital (a small part of the site to the north west is located 56-60 minutes from a hospital). Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Station Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 31-35 minutes travel time of a local centre (a small part of the site is located more than 60 minutes from a local centre) as well as being within 21-25 minutes travel time of a town/district centre (a small part of the site is located more than 60 minutes from a town/district centre). As such a minor negative effect is expected on this SA objective.</p>
7. Make our communities	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the

SA Objectives	SA Score	Justification
safer by reducing crime, anti-social behaviour and the fear of crime.		incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 100m of an amenity greenspace which is located to the north west. Outdoor sports facilities are provided within 200m of the site to the west. The nearest allotment to the site is within 380m to the west. Civic space can be accessed on Albion Street to the south of the site within 410m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.89ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. 11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (4.89ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.89ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mostly within LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	--?	Historic England has rated this site as 'red' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is likely to result in substantial harm to a designated heritage asset and subsequently that the site should not be allocated. This site lies within the boundary of the Registered Battlefield at Adwalton and substantial harm to this heritage asset's significance should be wholly exceptional as per national planning

SA Objectives	SA Score	Justification
		policy. The effect on this SA objective is therefore noted to be a significant negative although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 450m of Tong moor which has been designated as a Local Nature reserve and Local Wildlife Site and is to the north west. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and as such development at this location may result in an increase in impermeable surfaces within Kirklees and therefore may contribute to the potential for increased flood risk in the District. The site is not within Flood Zone 2 or Flood Zone 3. Overall a minor negative effect is expected on this SA objective.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objective 13: historic environment. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H263: Land south west of Bradford Road, Birstall

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 11-15 minutes travel time of the nearest employment node; as such a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of the nearest primary school. The majority of the site is also located within 16-20 minutes travel time of the nearest secondary school (a small part of the site to the south is within 11-15 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is also within 16-20 minutes travel time of the nearest further education centre (a small part of the site to the south east is within 11-15 minutes travel time of the nearest further education centre).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 6-10 minutes travel time of a GP (a small part of the site to the east is within 5 minutes travel time of a GP). The northern part of the site is within 41-45 minutes travel time of a hospital. The southern part of the site is within 31-35 minutes travel time of a hospital. Between these extremes travel times to a hospital are variable. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Monk Ings Avenue. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The southern part of the site is with 6-10 minutes travel time of a local centre while the northern part of the site is within 16-20 minutes travel times of a local centre. Areas in between these two extremes are located within variable travel times of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre (the south eastern part of the site is within 11-15 minutes of a town/district centre). As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is crossed by a footpath and it is accepted that this access route could be lost if housing development was to proceed at this location; as such a potential significant negative is recorded for this SA objective. The site is also however in close proximity to a number of open spaces which could be used by residents. The site is within 230m of amenity greenspace which is located to the east. A cemetery is located within 280m to the south east of the site. Two areas of outdoor sports facilities are located to the west within 240m and 140m respectively. The nearest children's playground is provided within 475m to the west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them and that the development at this location may result in the loss of an access route a mixed effect (significant positive/potential significant negative) is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.07ha); therefore a significant positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (7.07ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 3 Agricultural Land.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (7.07ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Gomersall Conservation Area that would result due to development of this open space.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>The site is within 190m of Oakwell Park which has been identified as a Local Wildlife Site and a Local Nature Reserve to the north. The proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a significant negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure (a mixed effect overall was recorded for this SA objective), 9: housing, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (a mixed effect overall was recorded for this SA objective)11: land use, 12: landscape and townscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H264: Land west of Dewsbury Road, Gomersal

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Most of this site is within 16-20 minutes travel time of the nearest employment node (aside from the eastern area which is within 11-15 minutes); therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary school. Most of the site is within 11-15 minutes to a secondary school (aside from the eastern area which is within 16-20 minutes); therefore it is likely to have a</p>

SA Objectives	SA Score	Justification
		significant positive effect. Most of the site is also within 21-25 minutes of a further education institute (aside from a small area which is 11-15 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is within 6-10 minutes travel time of a GP. Approximately half of the site is within 46-50 minutes of a hospital, the other half is within 51-55 minutes; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is situated between the A652 (Dewsbury Road) and the A651 (Oxford Road), which may mean that residents in these parts of the site are affected by road noise. There are also existing residential properties adjacent to the site to the north and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local centres and town/ district centres vary across the site. The western part of this site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. However, most of the eastern part of the site is within 16-20 minutes of a local centre and 6-10 minutes of a town/district centre. In between the far eastern and western parts of the site, journey times vary in between those two extremes. However overall a minor positive effect on this SA objective is expected.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site includes public rights of way (PRoW) which could be lost as a result of housing development. However, it is part of a much larger network of PRoW outside the site. There are four amenity greenspaces nearby, an area of semi natural and natural greenspace and a park and garden. Other areas include two outdoor sports facilities and four sites containing provision for children and young people. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (4.1ha); therefore, a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a small site (4.1 ha) on mainly greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated as Grade 3 Agricultural Quality land (aside from an area in the far west, which is designated as urban land)</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a small site (4.1 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The majority of the site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on Gomersal Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>The site is approximately 90km south west of Oakwell Park Local Nature Reserve and as such, a significant negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	<p>This site is mainly on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p>

SA Objectives	SA Score	Justification
waste close to source.		This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: leisure and recreation and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H265: Land to west of field Head Lane, Drighlington

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Access to employment nodes vary throughout the site. The least accessible area is in the north western part of this site which is within 36-40 minutes travel time of the nearest employment node. However, the most accessible part of the site is in the south-eastern part of the site is 16-20 minutes from an employment node. In between, journey times to employment nodes vary in between those two extremes. Therefore, a mixed effect on this objective is expected – negligible for the north-western part of the site and significant positive for the south-eastern part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Most of this site is within 11-15 minutes travel time to a primary school (aside from a small area in the south west which is within 6-10 minutes). However, travel times to secondary schools vary. The most accessible area is in the south-eastern edge where travel time is within 16-20 minutes, while the least accessible area to a secondary school is along the western boundary and in an area in the far eastern corner which is within 26-30 minutes. Travel times between these two extremes vary. Therefore, a mixed effect is expected-significant positive for the south-eastern edge and minor positive along the western boundary and in an area in the far eastern corner. Access to further education institute varies across the site.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Most of this site is within 11-15 minutes travel time of a GP (aside from a small area in the north-west and south-east which is within 6-10 minutes). Travel times to hospitals vary throughout the site. The most accessible area to a hospital is in the south-eastern part of the site which is within 46-50 minutes, while the least accessible area is in the far north which is within 56-60 minutes. Travel times to a hospital vary between these two extremes. However overall a minor positive effect is expected for this objective. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is south of the A650 (West Hill Street) and north of the M562, which may mean that residents in these parts of the site east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	--/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access vary throughout the site. The least accessible area is in the north west where it is 56-60 minutes travel time to a local centre and 41-45 minutes of a town/district centre. However, the most accessible area is in the south east where travel times are within 16-20 minutes to a local centre and 11-15 minutes travel time to a town/district centre. In between, journey times to vary in between those two extremes. Therefore, a mixed effect on this objective is expected – significantly negative for the western side and minor positive for the south east.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site includes public rights of way (PRoW) which could be lost as a result of housing development. However There are more than three recreation and leisure facilities within 600m of the site. There are several PRoW outside the site, which includes Bridleways and local footpaths. Other recreation and leisure space nearby includes a park and garden, an site containing provision for children and young people and three outdoor sports facilities. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (16.62ha); therefore, a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a large site (16.62 ha) on mainly greenfield land; therefore a significant negative effect on this SA objective is likely. The land is classified as Grade 3 Agricultural quality.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a large site (16.22 ha) mainly on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on a site adjacent to an area which is under consideration for inclusion within the boundary of the Registered Battlefield at Adwalton. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Oakwell Park Local Nature Reserve is approximately 60m south of the site and as such, a significant negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
pollution.		
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is mainly on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA 1: employment, 3: education, 8: leisure and recreation and 9: Housing, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 8: access to services, 11: land use and 12: landscape character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H266: Land east of Scholes Moor Road, Scholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 46-50 minutes travel time to the nearest employment node; therefore a minor negative effect on this objective is expected.
2. Achieve an economy better	0	The location of housing sites will not affect the success of the local economy. While housing development may result

SA Objectives	SA Score	Justification
capable of growth through increasing investment, innovation and Entrepreneurship.		in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6-10 minutes travel time to a primary school and 21-25 minutes to a secondary school; therefore it is likely to have a minor positive effect. It is also within 36-40 minutes to a further education institute (although the far eastern area of the site is within 41-45 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Approximately half of this site is within 6-10 minutes travel time to a GP while the other half is 11-15 minutes travel time to a GP. The whole site is over 60 minutes to a hospital; therefore overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the west and south which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes travel time to a local and town/district centre (although a small area in the east of the site is within 16-20 minutes); therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of three recreational facilities. There is a public right of way (PRoW) and three footpaths within walking distance, the closest being directly adjacent to the southern boundary of the site. There are also two outdoor sports facilities. A significant positive effect is therefore identified

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.68ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.68 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land has been designated as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.68ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is 315m from Morton Wood Local Wildlife site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 18: leisure and recreation, 10: sustainable transport and 19: climate change. No significant negative effects were identified.		

H267: Land south of Dark Lane, Almondbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 16-20 minutes travel time to a primary and secondary school; therefore it is likely to have a minor</p>

SA Objectives	SA Score	Justification
		positive effect. It is also within 31-35 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 16-20 minutes travel time of a GP. The site is also within 41-45 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the north, east and west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 16-20 minutes travel time to a local centre and within 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are three public rights of way (PRoW), the closest being approximately 20m south west of the site. Open spaces nearby include an area of amenity greenspace, which includes provision for children and young people, two areas of semi natural and natural greenspace and four outdoor sports facilities. A significant positive effect is therefore identified
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.52ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or

SA Objectives	SA Score	Justification
		entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.52ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Most of the land has been designated as urban, aside from a small area on the south-eastern boundary which is Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.52 ha) mainly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on the Scheduled Monument at Castle Hill, Grade II* Listed Fenny Hall and Grade II Listed Buildings along the eastern side of Birks Lane and the north and west side of Fenny Grange Farmyard. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is approximately 260m from Almondbury Common Local Wildlife Site and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: leisure and recreation. No potential significant negative effects were identified.		

H268: Land west of Netherton Fold, Netherton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Approximately half of this site is within 21-25 minutes travel time of the nearest employment node while the other half is within 26-30 minutes travel time; therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Approximately half of the site is within 6-10 minutes travel time to a primary school while the other half is within 5 minutes travel time to a secondary school. The whole site is within 21-25 minutes to a secondary school; therefore, it is likely to have a minor positive effect. It is also within 16-20 minutes of a further education institute (aside from a small area of land in the south east is within 26-30 minutes).
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Approximately half of this site is within 6-10 minutes travel time of a GP, while the other half is 5 minutes from a GP.

SA Objectives	SA Score	Justification
social care they need.		Approximately half of this site is within 36-40 minutes travel time to a hospital, while the other half is within 41-45 minutes; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the north and north-east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	++/+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The northern half of the site is within 5 minutes travel time of a local centre and 6-10 minutes travel time to a town/district centre. The southern half of the site is within 6-10 minutes travel time to a town centre, while most of the site is within 6-10 minutes of a town and district centre (although a small area in the south-east is within 11-15 minutes). Therefore, a mixed effect is expected; potentially significant positive effects for the northern half of the site and minor positive for the southern half of the site.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There is a public right of way (PRoW), the closest being adjacent to the site in the north. Open spaces nearby include two areas of semi natural and natural greenspace, four amenity greenspaces, and a park and garden, which includes provision for children and young people. Other areas include an outdoor sports facility and two allotments. A significant positive effect is therefore identified
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.77ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.77 ha) on mainly brownfield land; therefore a minor positive effect on this SA objective is likely.
12. Protect and enhance the	+?	This is a small site (1.77 ha) mainly on brownfield land; therefore development here could have a minor positive effect

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the uncertain potential impacts on Netherton Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 1km of four designated biodiversity features, the closest being Dean wood Local Wildlife Site (290m) and as such, a minor negative effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is mainly on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly on brownfield land; therefore a potential minor positive effect is identified.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 6: access to services: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified.		

H269: Land north west of Forge Lane, Thornhill Lees

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and is almost entirely within 21-25 minutes of a secondary school (although there is a very small area in the north west which is within 26-30 minutes); therefore there is likely to be a minor positive effect. The site is also within 36-40 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		This site is within 6-10 minutes travel time of a GP and 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to this site to the south which may be affected by noise during the construction phase. There are also industrial units immediately to the south west of the site which may result in noise affecting residents in the longer term, and a significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The site is entirely within 11-15 minutes travel time of a local centre. Most of the site (approximately two thirds) is within 11-15 minutes of a town/district centre, while the remaining third (in the south of the site) is within 16-20 minutes of a town/district centre; therefore a negligible effect is likely overall.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site includes a small area of amenity green space (in the south of the site) which could be lost as a result of housing development. However, there are several other recreation and leisure facilities within 600m of the site which could be used by new residents. These include three public rights of way (PRoWs) and two local cycle routes. Open space nearby includes two areas of semi natural and natural greenspace, the closest being directly adjacent to the site to the northwest, five amenity greenspaces and a green corridor. Other areas include six outdoor sports facilities, three sites containing provision for children and young people and two allotments. A mixed (significant positive and potentially significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.68ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.68 ha) on mainly brownfield land; therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a small site (2.68 ha) on mainly brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA M1: Calder Valley Floor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a valley landscape with limited woodland cover, and agricultural land cover is very limited due to urban development. This is a heavily urbanised area with little tranquillity, although the area has more of a rural feel in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' as it considers there to be potential negative impacts on the Grade I and Grade II buildings at Thornhill Lees Hall. The effect on this SA objective is therefore potentially minor negative although this is uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>The site is within 1km of (but more than 250m from) two designated biodiversity sites - Sparrow Wood and Lower Spen Local Nature Reserves. Therefore, a minor negative effect is possible in relation to this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	<p>This site is mainly on brownfield land and is outside of flood zone 3; therefore a negligible effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is mainly on brownfield land; therefore a potential minor positive effect is identified.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation (as part of a mixed effect overall), 10: sustainable transport and 19: climate change. Potential significant negative effects were identified in relation to SA objectives 5: amenity and 8: leisure and recreation (as part of a mixed effect overall). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H270: Land west of Back Lane, Grange Moor

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time to a primary school and most of this site is within 21-25 minutes to a secondary school, although the north western area is within 26-30 minutes; therefore it is likely to have a minor</p>

SA Objectives	SA Score	Justification
		positive effect. It is also within 36-40 minutes of a further education institute (aside from a small area in the far north western edge which is 41-45 minutes).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Approximately half of this site is within 6-10 minutes travel time of a GP while the other half is 5 minutes from a GP. Most of this site is also within 51-55 minutes of a hospital (aside from a small area in the far north western edge which is 56-60 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties adjacent to the site to the south-east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Approximately half of this site is within 6-10 minutes travel time to a local centre while the other half is 15-20 minutes from a town centre. Most of this site is within 21-25 minutes to a town/district centre (aside from a small area in the far north western edge which is within 26-30 minutes); therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of more than three recreational facilities. There are several public rights of way (PRoW). Open greenspaces nearby include an area of semi natural and natural greenspace, four areas of amenity greenspaces and one park and garden. Other areas include an area containing provision for children and young people, four outdoor sports facilities and two allotments, although the allotment immediately south of the site is included within the housing option site: H710 and therefore could be lost as a result of housing development. However overall significant positive effect has been identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.03ha); therefore, a minor positive effect is likely.
10. Secure an effective and safe transport network which	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car-based modes of transport day to

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.03 ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The land is designated Grade 4 Agricultural Quality land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (1.03 ha) mainly on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible however given that the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development this effect is recorded as uncertain.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Liley Wood Local Wildlife Site is the closest of such features but is located approximately 1.1km to the north and as such, a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a potential minor negative effect is identified.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site is classed as mainly or entirely 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified.		

H271: Land west of Wells Green Gardens, Netherthong, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary greatly throughout the site, from 31–35 minutes in the north east to more than 60 minutes in the south east. In between these parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely, being negligible for the north eastern part of the site and significant negative for the south eastern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. Levels of access to education facilities vary greatly throughout this site. Along the far north western edge it is 11–15 minutes

SA Objectives	SA Score	Justification
		travel time to a primary school, while in the south and centre of the site it is 26-30 minutes travel time. For secondary schools the journey time is between 11-15 minutes in the north east and over an hour in the south east. The north eastern part of the site is within 21-25 minutes a further education institute while journey times are longer from other parts of the site. On balance, the overall most accessible part of the site is the far north western tip and the least accessible part is the south eastern corner. In between those parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the north western tip and potentially minor negative for the south eastern part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary greatly throughout this site. The eastern part of this site is within 6-10 minutes travel time of a GP and within 56–60 minutes of a hospital. However, the south western part of the site is within 16-20 minutes of a GP and over an hour from a hospital. In between the far eastern and south western parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the eastern side and minor negative for the western side. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are existing residential properties adjacent to the eastern edge of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local centres and town/district centres vary greatly throughout this site. The north eastern part of the site is within 21-25 minutes of a local centre and the south eastern part of the site is more than an hour from a local centre. In between these areas, journey times to local centres vary in between those two extremes. The majority of this site is within 16 - 20 minutes of a town/district centre, with an area in the south west being between 21 -25 minutes from a town/district centre. Overall, a minor negative effect on this objective is expected for the whole of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance	++	There are a number of footpaths and areas of open space within walking distance (600m) of the site which could be used by

SA Objectives	SA Score	Justification
existing and support the provision of new recreation facilities and areas of open space and encourage their usage.		residents for sports and recreation, including a park and garden, an area of woodland, an outdoor sports facility and public footpaths which run adjacent or close to the eastern and northern boundaries of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.70ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4.70ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as Grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4.70ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Netherthong Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise	-?	This site is approximately 550m from Holmroyd Wood Local Wildlife Site; therefore development here could have a minor

SA Objectives	SA Score	Justification
opportunities to protect and enhance biodiversity and geodiversity.		negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation, and a potential significant negative effect was identified in relation to SA objective 1: employment (as part of a mixed overall effect). These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H272: Land at Cartworth Road, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+ +/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site varies greatly from under 5 minutes travel time of an employment node in the northwest to more than 60 minutes travel time of an employment node in the south. In between these parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely – potential significant positive effects for the northern part of the site and significant negative effect for the southern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site varies greatly from between under 5 minutes travel time of a primary school in the north, to more than 60 minutes in the west. For secondary schools the journey time is between 16 - 20 in the north and over an hour in southern, central and western parts. A northern part of the site is also within 31 - 35 minutes of a further education institute. In between the north and south parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for northern areas and potentially significant negative for the southern, western and central parts.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site varies greatly with the northern part of this site within 6 -10 minutes travel time of a GP, whilst western and central areas are over 60 minutes travel time. The northern part of the site is within 56 – 60 minutes of a hospital whilst the remainder is over 60 minutes away. In between these parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the northern part and significant negative for western and central parts. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties within 100m of the site on Cartworth Road, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local centres and town/district centres vary greatly throughout this site. The northern part of the site is within 16 - 20 minutes of a local centre and western and central parts of the site are more than an 60 minutes from a local centre. In between these areas, journey times to local centres vary in between those two extremes. The northern of this site is within 6 – 10 minutes of a town/district centre, while western and central parts are more than 60 minutes from a town/district centre. Therefore a mixed effect on this objective is expected – minor positive for the northern part and significant negative for western and central parts
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of footpaths, cyclepaths and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation, including 3 parks and gardens, an area of amenity greenspace, various areas of woodland, 2 outdoor sports facilities, a national cycle route and public footpaths which run adjacent or close to the eastern and northern boundaries of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large and is split in to three separate parts (totalling 17.74ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, 1 of the features assessed show a majority of 'green'. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (17.74ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as Grade 4 Agricultural Land).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (17.74ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' as this area adjoins the boundary of the Underbank Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 530m from Malkin House Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is mostly located outside of Flood Zone 2 and 3 (the most easterly edge of the site falls into Flood Zone 3); therefore a minor negative effect is expected for this site given that development at this location would increase the area of impermeable surfaces within Kirklees thus increasing the overall risk of flood within the District.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, 1 of the features assessed show a

SA Objectives	SA Score	Justification
		majority of the site is classed as 'green'. Therefore, a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (both part of a mixed effect) 8: leisure and recreation and 9: affordable housing. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: educational, 4: health, 6: local services (these negative scores were recorded as part of an overall mixed effect on these four SA objectives), 11: land use and 12: landscape and townscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H273

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site varies from 6 - 10 minutes travel time of an employment node in the south to 31 - 35 minutes travel time of an employment node in parts of the north. In between these parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely – potential significant positive effects for the southern part of the site and a negligible effect for some of the northern part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site varies greatly from between 11 - 15 minutes travel time of a primary school in the south, to 21 - 25 minutes in the parts of the north. For secondary schools the journey time varies greatly between 16 - 20 in the north-eastern part and 51 - 55 in the north-western tip. In between these parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for southern and north-eastern areas and potentially minor negative for north-western parts.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site varies with the southern part of this site within 6 -10 minutes travel time of a GP, whilst north-western and areas are within 26 - 30 minutes travel time. The southern part of the site is within 16 - 20 minutes of a hospital whilst north-western parts are 36 – 40 minutes away. In between these parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – significant positive for the southern

SA Objectives	SA Score	Justification
		part and a negligible effect for north-western parts. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties within 100m of the site, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local centres and town/district centres vary throughout this site. The southern and north-eastern part of the site is within 6 - 10 minutes of a local centre and the north-western tip of the site is 31 - 35 minutes from a local centre. In between these areas, journey times to local centres vary in between those two extremes. The north-eastern part of this site is within 6 – 10 minutes of a town/district centre, while the north-western tip is 31 - 35 minutes from a town/district centre. Therefore a mixed effect on this objective is expected – minor positive for the north-eastern part and a significant negative for north-western parts.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is on land which includes a Public Right of Way and a natural and semi-natural greenspace which is likely to give rise to a potential significant negative effect. There are a number of footpaths and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation, including 3 parks and gardens, 5 areas of semi-natural and natural greenspace, various areas of woodland, provision for children and young people two PRoWs which run close to the eastern and western boundaries of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large and is split in to three separate parts (7.42ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, seven of the features assessed show a majority of 'green'. Therefore, a significant positive effect is likely.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (7.42ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as Grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (7.42ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' as Haigh Cross to the west of this site and Crossland Road Farmhouse to the south are Grade II Listed Buildings. The loss of this area and its subsequent development could harm elements which contribute to their significance. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is located within 620m of Old Lindley Moor, Huddersfield which has been designated as a Local Geological Site to the north west. As such given that the relative proximity of this site to the identified geodiversity assets may result in detrimental impacts through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc a minor negative effect on this SA objective is expected. The negative effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be

SA Objectives	SA Score	Justification
water, energy and raw material use.		influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, seven of the features assessed show a majority of the site is classed as 'green'. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education 4: healthcare (these scores were recorded as part of an overall mixed effect for these three SA objectives) 8: leisure and recreation 9: affordable housing 10: sustainable transport 19: climate change. Potential significant negative effects were identified in relation to SA objectives 6: local services (as part of a mixed effect) 11: use of land and 12: character. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H274

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site varies from 16 - 20 minutes travel time of an employment node in the north-western and south-eastern tips to 36 - 40 minutes travel time of an employment node in western parts. In between these parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely – potential significant positive effects for north-western and south-eastern part of the site and a negligible effect for some of the western part.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site varies from between 6 – 10 minutes travel time of a primary school in the eastern part of the site, to 16 - 20 minutes in western part. For secondary schools, the picture is different with the journey time varies between 16 - 20</p>

SA Objectives	SA Score	Justification
		minutes in the western part of the site and 31 - 35 in the eastern part. In between these parts of the site, journey times to education facilities vary in between those two extremes. The travel time of a higher education facility is between 31 – 35 minutes and 36 – 40 minutes. Overall, although the journey time varies throughout the site, minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The site varies with the southern and northern part of this site within 11 - 15 minutes travel time of a GP, whilst western parts are within 21 - 25 minutes travel time. For hospitals, the picture is different, with The western part of the site 46 – 50 minutes travel time of a hospital, whilst the eastern part is less accessible at 56 – 60 minutes travel time. In between these parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the southern and northern part and a negligible effect for the rest of the site. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties within 100m of the site which may be affected by noise during the construction phase. There is a railway line immediately adjacent to the site. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. Levels of access to local centres and town/district centres vary throughout this site. The south-east and north-western part of the site is within 6 – 10 minutes of a local centre and the western part of the site is 16 - 20 minutes from a local centre. The south-east and north-western parts of this site are within 16 - 20 minutes travel time of a town/district centre, while the western part is between 31 - 35 minutes. Therefore a mixed effect on this objective is expected – minor positive for the north-western and south-eastern parts and a significant negative for south-eastern parts.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open	+ +/--?	The site includes two Public Rights of Way which may be lost if housing development was to proceed at this location. As such a potential significant negative effect is recorded for this SA objective. There are however also a number of Public Rights of Way and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation, including four areas of amenity greenspace, two areas of

SA Objectives	SA Score	Justification
space and encourage their usage.		semi-natural and natural greenspace, various areas of woodland, provision for children and young people, two outdoor sports facilities and two Public Rights of Way which run close to the eastern and western boundaries of the site. Therefore a mixed effect on this objective is expected – potential significant negative due to Public Rights of Way running through the site and significant positive for the number of sports and recreation facilities in close proximity to the site.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (15.13ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, two of the features assessed show a majority of 'green'. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (15.13ha) on high quality greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is mostly classed as Grade 3 Agricultural Land; a small part of the land is classified as Grade 4 Agricultural Land to the north west).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (15.13ha) on high quality greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is adjacent to the Gelder Wood candidate Wildlife Site and the Shipley Mill Wood Candidate Local Wildlife Site. The site is also less than 10m from the Upper and Lower Stone Woods approved Local Wildlife Site. An area of the Upper and Lower Stone Woods which is within 435m of the site to the north west has also been designated as a Local Geological Site; therefore development here could have a significant negative effect on this SA Objective. The effect is recorded as uncertain given that with any development there may be opportunities to protect habitat connectivity through provision of green infrastructure.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, 2 of the features assessed show a majority of the site is classed as 'green'. Therefore, a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: leisure and recreation facilities (the scores for these two SA objectives were recorded as part of an overall mixed effect) and 9: affordable housing. Potential significant negative effects were identified in relation to SA objectives 5: amenity, 6: local services, 8: leisure and recreation facilities (the scores for these last two SA objectives were recorded as part of an overall mixed effect), 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H275

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	++/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		This site is within 16 - 20 minutes travel time of the nearest employment node in the northwest, but more than 60 minutes in southeast; therefore a mixed effect is likely – a significant positive in the northwest and significant negative in the southeast.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site varies from between 6 – 10 minutes travel time of a primary school in the north-western part of the site, to over 60 minutes in the south-eastern part. For secondary schools, the journey time varies between 21 -25 minutes in the north-western part of the site and 31 - 35 in the south-eastern part. The travel time of a higher education facility is between 31 – 35 minutes and more than 60 minutes. Therefore a mixed effect on this objective is expected – minor positive for the north-western parts and a significant negative for south-eastern parts.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site varies from between 6 – 10 minutes travel time of a GP in the northwest to over 60 minutes travel time in the southeast. <p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (as part of a mixed effect), 9: affordable housing. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services (all as part of a mixed effect): 5: amenity 11: use of land, 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H276: Land west of Moorside Road, Kirkheaton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 36 – 40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11 -15 minutes travel time of a primary and 36 – 40 minutes of a secondary school so is likely to have a minor positive effect.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 10 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties which surround the entire site which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 5 minutes travel time of a local centre and within 16 - 20 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is adjacent to amenity green space to the south. There is an outdoor sports facility within 100m and a park and garden with provision for children and young people within 200m. The site is not located within any area currently designated as open space; therefore a significant positive effect is likely given that the location of usable open spaces in close proximity to the site may encourage use of these facilities by new residents.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing.</p>

SA Objectives	SA Score	Justification
		This site is relatively small (0.95ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	+	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (0.95ha) on brownfield land. The land has been classified as Grade 4 Agricultural Land. Overall a minor positive effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	This is a relatively small site (0.95ha) on brownfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not located in close proximity to the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 580m from the Local Nature Reserve and approved Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	0	This site is brownfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

SA Objectives	SA Score	Justification
use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. This site is on brownfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H277

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is largely within 11 – 15 minutes travel time of the nearest employment node, whilst a small part is within 16 - 20 minutes; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 6 - 10 minutes travel time of a primary and 11 – 15 minutes of a secondary school so is likely to have

SA Objectives	SA Score	Justification
		a significant positive effect. It is also within 36 – 40 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This small site is within between under 5 minutes and 6-10 minutes travel time of a GP and within between 26 - 30 and 31 – 35 minutes of a hospital; The site is not within or adjacent to an AQMA. Therefore a mixed effect on this objective is expected – significant positive for northern parts and a minor positive for the southern tip.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties around this site which may be affected by noise during the construction phase, including properties directly adjacent to the western boundary of the site. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6 - 10 minutes travel time of a local centre and within 16 – 20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site includes a local cycle network and an area of semi-natural and natural greenspace. These designations may be lost as a result of housing development at this location and therefore a potential significant negative effect is identified.</p> <p>There are however also a number of footpaths and areas of open space within walking distance (600m) of the site which could be used by residents for sports and recreation including two areas of semi-natural and natural greenspace, two areas of provision for children and young people, two allotments and three Public Rights of Way which run close to the southern boundary of the site. Therefore a mixed effect on this objective is expected – a potential significant negative due to Public Right of Way running through the site which may be lost due to housing development on the site and a significant positive considering the number of sports and recreation facilities in the area.</p>
9. Ensure all people are able	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		<p>proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing.</p> <p>This site is relatively small (0.72ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	+	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.72ha) on mainly brownfield land (part of the site to the north is located on greenfield land); therefore a minor positive effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	+?	<p>This is a relatively small site (0.72ha) on mainly brownfield land (part of the site to the north is located on greenfield land). The site is located on mainly Urban Land (a small part of the site to the south has been identified as Grade 4 Agricultural Land); therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is a significant distance from the Peak District National Park.</p> <p>The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 670m from the Sparrow Wood Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	0	<p>This site is on mostly brownfield land (part of the site to the north is located on greenfield land) and is outside of flood zones 2 and 3; therefore a negligible effect is likely.</p>

SA Objectives	SA Score	Justification
people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	+?	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is located on mostly brownfield land (part of the site to the north is located on greenfield land); therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 10: sustainable transport and 19: climate change. In addition potential significant positive effects included as part of an overall mixed effect were identified for SA objectives 4: health and 8: leisure and recreation. Potential significant negative effect was identified in relation to SA objective 5: amenity and also SA objectives 4: health and 8: leisure and recreation as part of an overall mixed effect. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H278: Land off Lands Beck Way, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 6 -10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	++?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 10 minutes travel time of both a primary and a secondary school so is likely to have a significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 15 minutes travel time of a GP and within largely within 31 - 35 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of residential properties which surround the north and northwestern portion of site which may be affected by noise during the construction phase. Furthermore, the site is adjacent to an A road. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 5 minutes travel time of a local centre and within 15 minutes of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>This site is within 400m of a National Cycle Network route, 400m of an outdoor sports facility and 550m of a Green Corridor. The site is not located within any area currently designated as open space; therefore a significant positive effect is likely given that the close proximity of these areas of open space may encourage new residents to make use of them.</p>
9. Ensure all people are able to live in a decent home	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable</p>

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is relatively small (0.86ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural greenfield land. This is a relatively small site (0.86ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been classified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.86ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site lies well out with the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	There are no sites designated for biodiversity and geodiversity within 1km of the site; therefore a negligible effect is expected on this SA objective. The effect is recorded as uncertain given that new development may present opportunities to promote habitat connectivity through the provision of green infrastructure etc.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that development of this site would lead to an increase in the area of impermeable surfaces within the District and an overall increase in food risk within Kirklees.

SA Objectives	SA Score	Justification
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a minor positive effect is likely
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment opportunities, 3: education facilities, 6: local services, 8: open space, 10: sustainable transport and 19: contribution to climate change, and potential significant negative effects in relation to 5: residential amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H279

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary greatly throughout the site, from 16 – 20 minutes in the north east to 36 – 40 minutes in the centre. In other parts of the site, journey times to employment nodes vary in between those two extremes. Overall a mixed effect is likely, being significantly positive for the north-eastern part of the site and negligible for the central part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++/?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary greatly throughout this site. The northern tip of the site is within 11–15 minutes travel time to a primary school, while in the south and centre of the site it is 26-30 minutes travel time. For secondary schools the journey time is between 16-20 minutes in the north east and 36-40 minutes in the centre and south of the site. A small area in the north east of the site is within 11-15 minutes of a further education institute while journey times are longer from other parts of the site. On balance, the overall most accessible part of the site is the far northern tip and the least accessible part is the centre and south. In between those parts of the site, journey times to education facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially significant positive for the northern tip and potentially negligible for the central and southern part.</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	+/-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary greatly throughout this site. The northern tip of this site is within 11-15 minutes travel time of a GP, while an area in the centre and south is 36-40 minutes from a GP. The eastern edge of the site is 31-35 minutes from a hospital, while the north western corner of the site is within 46-50 minutes of a hospital. On balance, the most accessible part of the site for healthcare facilities is the northern tip where it is 11-15 minutes to a GP and 36-40 minutes of a hospital, and the least accessible part of the site is the central area where it is 36-40 minutes to a GP and 36-40 minutes of a hospital. In between those parts of the site, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – minor positive for the northern tip and minor negative for the central area. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are what appear to be industrial units adjacent to the south of this site, which may mean that residents in that part of the site are affected by noise and a significant negative effect is likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local centres and town/district centres vary greatly throughout this site. The northern tip of the site is within 11-15 minutes of a local centre, while the central southern part of the site is within 31-35 minutes of a local centre. Similarly, the northern tip of the site is within 16 -20 minutes of a town/district centre, while the central southern part is within 41-45 minutes of a town/district centre. In between these areas, journey times vary in between those two extremes. Therefore a mixed effect on this objective is expected – negligible for the northern tip and</p>

SA Objectives	SA Score	Justification
		significant negative for the central southern area.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are public playing fields approximately 200m to the south east of this site and approximately 280m to the south. In addition, there is a children's playing area approximately 315m to the north west, and a public footpath which runs adjacent to the eastern and northern boundaries of the site. There is also an area of amenity greenspace approximately 220m to the south. A significant positive effect is therefore likely given that the close proximity of these areas of open space to the site may encourage new residents to make use of them.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.32ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for none of the eight features assessed. Therefore, a significant negative effect is likely.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (5.32ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. Part of the site in the east is Grade 3 Agricultural Land (the western part of the site is located on Grade 4 Agricultural land), which reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively large site (5.32ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from the nearest designated biodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was assessed as being entirely or mainly 'green' for none of the eight features assessed. Therefore, a significant negative effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect overall), 3: education (part of a mixed effect overall), 8: leisure and recreation and 9: housing, and potential significant negative effects were identified in relation to SA objectives 5: amenity, 6: access to services (part of a mixed effect overall), 10: sustainable transport, 11: efficient use of land, 12: landscape and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H280

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 26-30 minutes travel time of the nearest employment node (although a small area to the west of the site is within 31-35 minutes); therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although a small area to the east</p>

		of the site is within 11-15 minutes travel time) and the whole site is within 11-15 minutes of a secondary school; therefore a significant positive effect is likely. It is also within 20 minutes of a further education institute, which will further contribute to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes travel time of a GP (although an area to the north west of the site is within 6-10 minutes) and within 36-40 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m to the north and east of the site which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes travel time of a local centre and the majority is within 11-15 minutes of a town/district centre (although a small area to the south west is within 16-20 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space, including a large area of allotments, approximately 200m to the south east of the site. There is also a recreation ground approximately 50m to the north west, which includes a children's playground. In addition a Public Right of Way is located approximately 13m from the southern site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.79ha); therefore a minor positive effect is likely.
10. Secure an effective and safe	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

transport network which encourages people to make use of sustainable and active modes of transport.		<p>transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed, and for the majority of a sixth (although a small area to the south west of the site was classed as 'blue'). Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.79ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.79ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the former Church of St Luke and its vicarage, which would be within 80m and 50m of the new developments. Both of these are Grade II Listed Buildings. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>This site is approximately 212m from the Huddersfield Narrow Canal candidate Local Wildlife Site; therefore development here could have a significant negative effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p>

close to source.		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed, and for the majority of a sixth (although a small area to the south west of the site was classed as 'blue'). Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 14: biodiversity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H281

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 21-25 minutes travel time of the nearest employment node; therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 5 minutes travel time of a primary and 11-15 minutes of a secondary school so is likely to have a significant positive effect (although a small area to the east of the site is within 6-10 minutes of</p>

SA Objectives	SA Score	Justification
		both a primary and secondary school). It is also within 15 minutes of a further education institute which will further contribute to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (although an area to the east of the site is within 6-10 minutes) and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is surrounded by existing residential development and other sensitive receptors; a significant negative effect on this SA objective is therefore likely during the construction phase.</p>
6. Retain and enhance access to local services and facilities.	++	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 5 minutes travel time of a local centre and within 11-15 minutes of a town/district centre (although an area to the north west of the site is within 11-15 minutes of a local centre and 16-20 minutes travel time of a town/district centre; therefore a significant positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space, including a public playing field approximately 76m to the south east of the site, a bowling green approximately 16m to the north east and a children playground approximately 140m to the north west. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.68ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day

SA Objectives	SA Score	Justification
people to make use of sustainable and active modes of transport.		to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.68ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.68ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 243m from the Sunny Bank Ponds Local Nature Reserve; therefore development here could have a significant negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.

SA Objectives	SA Score	Justification
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 6: services, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H282

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 46-50 minutes travel time of the nearest employment node (although an area to the south west is within 51-55 minutes travel time); therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 21-25 minutes travel time of both a primary school and a secondary school (although an area to the north is within 16-20 minutes travel time of both) and so is likely to have a negligible effect. It is also within 15 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 16-20 minutes travel time of a GP. A central area of the site is within 51-55 minutes travel time of a hospital; however an area to the north east of the site is over an hour travel time from a hospital. Therefore</p>

SA Objectives	SA Score	Justification
		a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m to the south and west of the site which may be affected by noise during the construction phase. The site also includes a number of existing residential properties in the southern part, which may also be affected. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 21-25 minutes travel time of a local centre (although an area to the north is within 16-20 minutes travel time) and within 16-20 minutes of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space including an area of semi-natural and natural greenspace approximately 164m to the west of the site and a recreation ground approximately 226m south of the site. In addition a footpath runs directly adjacent to the north west site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant minor effect is likely.</p>
11. Secure the efficient and prudent	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use

SA Objectives	SA Score	Justification
use of land.		of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.54ha) on mainly greenfield land (although there are some existing residential properties in the southern part); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.54ha) on greenfield land (although there are some existing residential properties in the southern part); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Netherton Farmhouse, 32 Manor Road (to the south of this area) and 44 Manor Road (to the east) which are Grade II Listed Buildings. The loss of this area and its subsequent development could harm elements which contribute to their significance. This area also lies within the Farnley Tyas Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not within 1km of any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (although there are some existing residential properties in the southern part); and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on mainly greenfield land (although there are some existing residential properties in the southern part); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to none of the eight features assessed. Therefore, a significant minor effect is likely.</p>
<p>Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 10: sustainable transport and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H283

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Half of this site is within 41-45 minutes travel time of the nearest employment node, while the other half is within 46-50 minutes travel time; therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Half of this site is within 11-15 minutes travel time of a primary school, while the other half is within 16-20 minutes travel time. The whole site is within 41-45 minutes travel time from a secondary school; so is likely to</p>

SA Objectives	SA Score	Justification
		have a minor negative effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 16-20 minutes travel time of a GP (although an area to the north of the site is within 11-15 minutes) and within 51-55 minutes of a hospital; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there is a sensitive receptor within 10m of the western site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 11-15 minutes travel time of a local centre (although a small area to the north of the site is within 6-10 minutes) and the whole site is within 21-25 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is partially within an area of private playing field, which could be lost as a result of housing development. However, as this is a private open space, not for general use this has not been included in the assessment of this SA objective. The site is within 600m of a number of areas of open space, including a public playing field and children's playground, approximately 75m to the north east. There is also a Local Nature Reserve located approximately 341m to the north west of the site. In addition there is a public bridleway approximately 35m to the south west. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.1ha); therefore a minor positive effect is likely.
10. Secure an effective and safe	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
transport network which encourages people to make use of sustainable and active modes of transport.		<p>transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.1ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.1ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 342m from the Dalton Bank Local Nature Reserve and 726m from the Round Wood, Tandem Local Wildlife Site ; therefore development here could have a minor negative effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
<p>Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation and a potential significant negative effect was also identified in relation to SA objective 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H284: Broad Lane, Upperthong, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of this site is within 46-50 minutes travel time of the nearest employment node (although the northern part is within 51-55 minutes travel time); therefore a minor negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The whole of this site is within 11-15 minutes travel time of a primary. The northern part of the site is within 26-30 minutes travel time of a secondary school; however the southern part is within 16-20 minutes travel time. In between, journey times vary between these two extremes. A mixed effect is therefore likely; significant positive in the southern area of the site and minor positive effect in the northern part.</p>

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The northern part of this site is within 16-20 minutes travel time of a GP; however the southern part (an area which makes up approximately half the site) is within 11-15 minutes travel time. The whole site is more than an hour travel time from a hospital. A mixed effect is therefore likely – minor positive in the southern part of the site and minor negative in the northern part of the site. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties directly adjacent to the eastern and western site boundary, and in close proximity to the northern boundary, which may be affected by noise during the construction phase. However the site is not surrounded by residential development; therefore a minor negative effect on this SA objective is likely.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The northern part of this site (an area which makes up approximately half the site) is within 26-30 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; however the southern part of this site is within 21-25 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. A mixed effect is therefore likely – minor positive in the southern part of the site and minor negative in the northern part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of an area of semi-natural and natural greenspace, located approximately 124m to the south of the site. In addition there is a National Cycle route located approximately 53m to the south and a Public Right of Way located approximately 76m to the north. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.03ha); therefore a minor positive effect is likely.
10. Secure an effective and safe	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of

SA Objectives	SA Score	Justification
transport network which encourages people to make use of sustainable and active modes of transport.		<p>transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as completely 'green' in terms of its access to one of the eight features assessed. For two other features approximately half of the site was classed as 'green'. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.03ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.03ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	<p>This site is approximately 752m and 984m from the Malkin House Wood and Carr Green Meadows Local Wildlife Sites; therefore development here could have a minor negative effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use,	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing</p>

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as completely 'green' in terms of its access to one of the eight features assessed. For two other features approximately half of the site was classed as 'green'. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education and 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives.		

H285: Land North East of Portal Crescent, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 21-25 minutes travel time of the nearest employment node (although the central area is within 16-20 minutes travel time); therefore a minor positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. This site is within 11-15 minutes travel time of both a primary and secondary school so is likely to have a

SA Objectives	SA Score	Justification
		significant positive effect. It is also within 20 minutes of a further education institute, which will contribute to the significant positive effect.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 11-15 minutes travel time of a GP and within 46-50 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the west and south west site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 6-10 minutes travel time of a local centre and the majority is within 16-20 minutes of a town/district centre (although part of the west of the site is within 11-15 minutes travel time); therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is bisected by a Public Right of Way, which could be lost as a result of housing development. However, it is also within 600m of a number of areas of open space including an area of amenity greenspace approximately 450m to the north west, a Local Nature Reserve approximately 344m to the south west and playing fields approximately 543m to the south west. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.92ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day

SA Objectives	SA Score	Justification
people to make use of sustainable and active modes of transport.		to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.92ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.92ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 409m from the Sunny Bank Ponds Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water,	0	While all new residential development is likely to involve an increase in energy and water consumption this will not

SA Objectives	SA Score	Justification
energy and raw material use.		be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H286: Land West of Hanson Road, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--/0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western part of this site is within 51-55 minutes travel time of the nearest employment node; however a small area in the eastern part is within 36-40 minutes travel time. In between, journey times vary between these two extremes. A mixed effect is therefore likely – significant negative in the western part of the site and negligible in the eastern part of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 11-15 minutes travel time of a primary school (although an area in the western part is within 16-20 minutes travel time). A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-/+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 31-35 minutes travel time of a local centre and 21-25 minutes travel time of a town/district centre; however an area to the east of the site is within 16-20 minutes travel time of a local centre and 6-10 minutes travel time of a town/district centre. In between, journey times vary between these extremes. A mixed effect is therefore likely – minor negative in the western part of the site and minor positive in the eastern part of the site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site is bisected by an existing Public Right of Way to the south, which could be lost as a result of housing development. However the site is also within 600m of a number of areas of open space, including two areas of semi-natural and natural greenspace approximately 144m and 215m to the north of the site, and a green corridor located approximately 166m to the north of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the

SA Objectives	SA Score	Justification
in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (6.6ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (6.6ha) on greenfield land; therefore a significant negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (6.6ha) on greenfield land approximately 83m from the boundary of the Peak District National Park.</p> <p>Therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts two late Prehistoric enclosed settlements to the east of this area. Both lies about 480m from the site boundary and are designated Scheduled Monuments. The loss of this area and its subsequent development could harm elements which contribute to the significance of these Scheduled Monuments.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 840m from the South Pennine Moors, a designated SAC, SPA and SSSI and 972m from the South Pennine Moors Local Geological Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and 9: housing, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation, 11: landuse and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H287: Land South of Lane Side, Kirkheaton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The western part of this site is within 31-35 minutes travel time of an employment node; however the eastern part is over an hour travel time from the nearest employment node. In between, journey times vary between these two extremes. A mixed effect is therefore likely – negligible in the western part of the site and significant negative in the eastern.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new

SA Objectives	SA Score	Justification
available to all.		<p>places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The western part of this site is within 6-10 minutes travel time of a primary school and within 31-35 minutes travel time of a secondary school; however the eastern part is over an hour travel time from the nearest primary school and the nearest secondary school. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive in the western part of the site and significant negative in the eastern.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The western part of this site is within 6-10 minutes travel time of a GP and within 46-50 minutes travel time of a hospital; however the eastern part is over an hour travel time from both the nearest GP and the nearest hospital. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive in the western part of the site and significant negative in the eastern. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of site boundary, especially to the northern and western boundaries which may be affected by noise during the construction phase. There are also several existing buildings located in the eastern part of the site which may be affected by noise. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 6-10 minutes travel time of a local centre and within 11-15 minutes travel time of a town/district centre; however the eastern part is over an hour travel time from both the nearest local centre and the nearest town/district centre. In between, journey times vary between these two extremes. A mixed effect is therefore likely – minor positive in the western part of the site and significant negative in the eastern.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will</p>

SA Objectives	SA Score	Justification
		not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is partially bisected by three Public Rights of Way, which could be lost as a result of housing development. However it is also within 600m of a number of areas of open space including a green corridor, approximately 95m to the west of the site, and area of semi natural and natural greenspace approximately 130m west of the site and an area of amenity greenspace approximately 209m to the west of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (11.44ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (11.44ha) on mainly greenfield land (although there are several existing buildings in the eastern part of the site); therefore a significant negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (11.44ha) on mainly greenfield land (although there are several existing buildings in the eastern part of the site); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Church of St John the Baptist, a Grade II* Listed Building to the west of this site and the Beaumont Arms and the adjoining barns which are Grade II Listed Buildings, near the proposed access point of this site. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 372m from the Round Wood Local Wildlife Site, 748m from the Gawthorpe Lower Wood Local Wildlife Site and 858m from the Dalton bank Local Wildlife Site and Nature Reserve; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	--	This site is on greenfield land (although there are several existing buildings in the eastern part of the site); and a large area of land designated as flood zone 3 runs from west to east through the centre of the site; therefore a significant negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land (although there are several existing buildings in the eastern part of the site); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation (overall mixed effect identified) and 9: housing. Potential significant negative effects were identified in relation to SA objectives 1: employment, 3: education, 4: health, 6: services, 8: leisure and recreation (all identified as part of an overall mixed effect), 11: land use, 12: landscape and 16: flood risk. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H288: Dunford Road, Hade Edge, Holmfirth

SA Objectives	SA Score	Justification
---------------	----------	---------------

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 51-55 minutes travel time of the nearest employment node; therefore a significant negative effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The north western part of this site is within 5 minutes travel time of a primary school; however the eastern part is within 11-15 minutes travel time. In between, journey times vary between these extremes. The majority of the site is within 26-30 minutes travel time of a secondary school (although an area to the south is within 32-35 minutes). A minor positive effect is therefore likely, as despite variances the whole site is within 15 minutes of a primary school.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	-	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 21-25 minutes travel time of a GP (although an area to the east is within 26-30 minutes) and the whole site is over an hour travel time from a hospital; therefore a minor negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the western and part of the eastern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 16-20 minutes travel time of a local centre, although a very small area to the south east is within 26-30 minutes. The majority of the site is also within 16-20 minutes travel time of a town/district centre; however an area in the east of the site is within 26-30 minutes. In between, journey times vary between these extremes. Despite these variances a minor negative effect is likely across the whole site.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	This site is within 600m of a number of areas of open space, including a recreation ground approximately 94m to the north west, a children's playground approximately 121m to the north west and an outdoor sports facility approximately 254m to the north east. In addition there is a Public Right of Way located approximately 164m to the west. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.79ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. 12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (5.79ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment. The allocation of this site could impact on Hade Edge Methodist Church and the adjacent Sunday School, which are Grade II Listed Buildings located to the west of the site; however its development is unlikely to result in harm to these buildings if the development accords with the anticipated Local Plan policies for managing changes to the historic environment. The effect on this SA objective is therefore likely to be minor negative but uncertain, as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 339m from the Wild Boar Clough candidate Local Wildlife Site and 731m from the Morton Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation and 9: housing, and		

SA Objectives	SA Score	Justification
potential significant negative effects were identified in relation to SA objectives 1: employment, 11: land use and 12: landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H289: Former White Lee Colliery, Leeds Road, Heckmondwike

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 16-20 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of the site is within 16-20 minutes travel time of a primary school (although a small area to the south west is within 11-15 minutes). The northern area of the site is 31-35 minutes travel time of a secondary school, whereas a small area to the south west is within 21-25 minutes travel time. In between, journey times to a secondary school vary between these extremes. A mixed effect is therefore likely – minor positive in the south west and negligible to the north of the site.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 16-20 minutes travel time of a GP (although an area to the north is within 21-25 minutes travel time) and within 41-45 minutes of a hospital (although the southern area is within 36-40 minutes travel time; therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. The western site boundary is directly adjacent to the A651 (Gomersal Road) which may mean that residents in that part of the site are affected by road noise. There are also a number of residential properties adjacent to the

		site to the south east which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of a local centre (although a small area to the west is within 11-15 minutes) and within 16-20 minutes of a town/district centre (although a small area to the west is within 21-25 minutes travel time; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 600m of a number of areas of open space, including two areas of amenity greenspace, located approximately 375m to the south west and approximately 258m to the south of the site. A recreation ground is also located approximately 352m to the south west of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.26ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.26ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.26ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p>

		The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Stubley Farmhouse, 100m north east of this site, and the Bar House, approximately 80m from the north west site boundary. Both are Grade II Listed Buildings. The loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is more than 1km from any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: leisure and recreation, and a potential significant negative effect was identified in relation to SA objective 5: amenity. This issue will need to be considered further in terms of mitigation		

and/or enhancement, which may be achieved through Local Plan policies.

H290: The Ridgeways, Linthwaite

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 36-40 minutes travel time of the nearest employment node; as such a negligible effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 5 minutes travel time of the nearest primary school and within 6-10 minutes travel time of the nearest secondary school. Overall a significant positive effect is expected on this SA objective. The majority of the site is also within 21-25 minutes travel time of the nearest further education centre (the western part of the site is within 16-20 minutes travel time of the nearest further education centre).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of a GP and within 46-50 minutes travel time of a hospital. Overall a minor positive effect is expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on The Ridgeways and to the east on Gillroyd Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre (a small part of the site to the east is within 11-15 minutes of a town/district centre). As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within close proximity of outdoor sports facilities which are accessible on Gillroyd Lane to the east within 50m. A small children's playground and amenity greenspace is located within 70m of the site to the south west of the site. To the north of the site within 170m there is a further amenity greenspace as well as allotment provision. A small park which includes a children's playground is located within 600m to the south west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.77ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.77ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Urban Land in terms of its Agricultural Land Classification.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.77ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Dean Wood (a Local Wildlife Site) is the closest of such features but is located 1.62km to the south east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H291: Land to the south east of Marsh Lane, Shepley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The site is within 21-25 minutes travel time of the nearest employment node; as such a minor positive is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of the nearest primary school. The majority of the site is also within 11-15 minutes travel time of the nearest secondary school (the western part of the site is within 16-20 minutes travel time of the nearest secondary school). Overall a significant positive effect is expected on this SA objective. The majority of the site is also within 26-30 minutes travel time of the nearest further education centre (the northern part of the site is</p>

SA Objectives	SA Score	Justification
		within 21-25 minutes travel time of the nearest further education centre).
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest GP (the northern part of the site is within 6-10 minutes travel time of the nearest GP) and within 51-55 minutes travel time of the nearest hospital. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north east on Dob Royd. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre. As such a negligible effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A semi-natural and natural greenspace is located within 170m to the north east of the site. Outdoor sports facilities are provided within 235m to the north of the site. A bridleway and footpath can be accessed within 185m to the north west of the site.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.5ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p>

SA Objectives	SA Score	Justification
use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.5ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.5ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 610m of Upper and Lower Stones Wood which has been designated as a Local Wildlife Site to the north west (part of the wood has also been designated as a Local Geological Site). The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings

use, recovery and recycling of waste close to source.		and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H292: Haughs Road, Quarmby

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 11-15 minutes travel time of the nearest employment node (a small part of the site to the west is within 16-20 minutes travel time of the nearest employment node); as such a significant positive is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is within 6-10 minutes travel time of the nearest primary school (the western part of the site is within 11-15 minutes travel time of the nearest primary school). The site is also within 46-50 minutes travel times of the nearest secondary school. Overall a minor positive effect is expected on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest GP (the western part of the site is within 16-20 minutes travel time of the nearest GP) and within 11-15 minutes travel time of the nearest hospital (the western part of the site is within 16-20 minutes travel time of the nearest hospital). A significant positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north and north west on Hayfield Avenue and to the east on Ryefields Avenue. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes travel time of a local centre (the south west of the site is within 11-15 minutes travel time of a local centre) and within 11-15 minutes travel time of a town/district centre (the south west of the site is within 16-20 minutes travel time of a town/district centre). As such a minor positive is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. Outdoor sports facilities can be accessed at Salendine Nook High School within 65m of the site to the west. A semi-natural and natural greenspace (woodland) is accessible within 55m of the site to the south east. Amenity greenspace is located within 280m to the north east of the site. Allotments are also located to the north east of the site within 460m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make</p>

SA Objectives	SA Score	Justification
		use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.77ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.77ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.77ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Quarmby Fields Conservation Area within which the site is located. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Gledholt Woods (a Local Wildlife Site and a Local Nature Reserve) is the closest of such features but is located 1.84km to the south east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and

SA Objectives	SA Score	Justification
risk areas and ensure development does not contribute to increased flood risk for existing property and people.		could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation and leisure 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H294: St Marys Avenue, Netherthong

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The eastern part of the site is located more than 60 minutes travel time from the nearest employment node. The western part of the site is located within 36-40 minutes travel time of the nearest employment node. The areas between these extremes are located within variable travel times of the nearest employment node. Overall a mixed effect (negligible/ significant negative) is expected on this SA objective.
2. Achieve an economy better capable of growth	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing

SA Objectives	SA Score	Justification
through increasing investment, innovation and Entrepreneurship.		provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of the nearest primary school (a small part of the site to the north east is located within 11-15 minutes travel time of the nearest primary school). The majority of the site is located more than 60 minutes travel time of the nearest secondary school (part of the site to the west is located within 26-30 minutes ravel time of the nearest secondary school). Overall minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of the nearest GP (the north western part of the site is located within 6-10 minutes travel time of the nearest GP). The majority of the site is located more than 60 minutes travel time from the nearest hospital (a small part of the site to the west is located within 56-60 minutes travel time of the nearest hospital). Overall a minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on St Mary's Crescent, and to the south and east on Haigh lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The eastern part of the site is located more than 60 minutes travel time of the nearest local centre. The south eastern part of the site is located within 21-25 minutes travel time of the nearest local centre. The site is located within 16-20 minutes travel time of the nearest town/district centre. As such a minor negative is expected on this SA objective for the entire site.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is in close proximity to a number of open spaces which could be used by residents. A semi-natural and natural greenspace is located to the south of the site within 50m. Netherthong Primary School provides access to outdoor sports facilities within 110m also to the south of the site. An amenity greenspace and children's playground are located to the south of the site within 240m. Further to the south of the site within 310m a cemetery is accessible at All Saints Church. As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.06ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two out of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.06ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 4 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.06ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment. The site adjoins the boundary of the Netherthong/Deanhouse Conservation Area and as such the loss of this currently-open area and its subsequent development could harm elements which contribute to the Conservation Area's significance.

SA Objectives	SA Score	Justification
		The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Holmroyd Wood which has been identified as a Local Wildlife Site to the west within 545m. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objective 1: employment (it should be noted however that an overall mixed effect was recorded for this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H295: Land south of Back Lane, Clayton West

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 6-10 minutes of the nearest employment node. As such a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The site is within 6-10 minutes travel time of a primary school and within 16-20 minutes travel time of a secondary school. As such a significant positive effect is expected on this SA objective. The site is also within 16-20 minutes of the nearest further education centre.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of the site is within 11-15 minutes travel time of the nearest GP (the northern part of the site is within 6-10 minutes travel time of the nearest GP) and within 51-55 minutes travel time of the nearest hospital. A minor positive effect is therefore expected on this SA objective.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to existing residential properties to the north on Whinmoor Drive. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre (the south eastern corner of the site is within 11-15 minutes travel time of a town/district centre). As such a minor positive is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 55m of a semi-natural and natural greenspace which is to the west. Further to the west within 75m of the site outdoor sports facilities are accessible via Woodbine Terrace. Back Lane provides access to a children's playground to the west within 110m. Allotments can be accessed via Long Lane and are located within 255m to the west.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 3 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.44ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p>

SA Objectives	SA Score	Justification
		The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is in close proximity to Cliffe Woods Park Quarry, Clayton West which has been identified as a Local Geological Site to the south west within 910m. The relative proximity of the site to this designated geodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land (it is noted that the most north easterly part of the site has previously been developed) meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is not classed as 'green' in terms of its access to any of the eight features assessed; therefore a significant negative effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objectives 10: transport, 14: biodiversity and geodiversity and 19: climate change. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H297: Ryecroft Lane, Scholes

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is within 46-50 minutes travel time of the nearest employment node (the western part of the site is within 51-55 travel time minutes of the nearest employment node). As such a minor negative effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	+?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school. The majority of the site is within 21-25 minutes travel time of a secondary school. As such a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 16-20 minutes travel time of the nearest GP (the northern part of the site is within 6-10 minutes travel time of the nearest GP) and within 51-55 minutes travel time of the nearest hospital. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Whinmoor Drive. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The majority of the site is also within 6-10 minutes travel time of a town/district centre (the south eastern corner of the site is within 11-15 minutes travel time of a town/district centre). As such a minor positive is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 55m of a semi-natural and natural greenspace which is to the west. Further to the west within 75m of the site outdoor sports facilities are accessible via Woodbine Terrace. Back Lane provides access to a children's playground to the west within 110m. Allotments can be accessed via Long Lane and are located within 255m to the west.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Riding Wood (additional) (a Candidate Local Wildlife Site) is the closest of such features but is located 1.07km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H298: Intake, Golcar

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 36-40 minutes travel time of the nearest employment node. As such a negligible effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities	+?	The availability of school and college places to serve the growing population will depend in part on whether new places

SA Objectives	SA Score	Justification
are available to all.		<p>are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school. The site is also within 41-45 minutes travel time of a secondary school. As such a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is within 6-10 minutes travel time of the nearest GP and within 41-45 minutes travel time of the nearest hospital. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on Moorcroft and to the east on Green Crescent. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The site is also within 11-15 minutes travel time of a town/district centre. As such a minor positive is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is on land which has been identified as a semi-natural and natural greenspace, which could be lost as a result of housing development; therefore a potential significant negative effect is identified. However, the site is also in close proximity to a number of additional open spaces which could be used by residents. Allotments and an amenity greenspace are located on the western boundary of the site. Further semi-natural and natural greenspace is located along the southern boundary of the site. St John's CE Junior & Infant School provides further outdoor sports facilities to the south west of the site within 130m. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the</p>

SA Objectives	SA Score	Justification
to live in a decent home which meets their needs.		proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.09ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.09ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Urban Land in terms of its Agricultural Land Classification.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.09ha) on mostly greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 710m of Huddersfield Narrow Canal which has been identified as a Candidate Local Wildlife Site to the south east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how

SA Objectives	SA Score	Justification
		<p>accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is within 6-10 minutes travel time of a primary school. The site is also within 6-10 minutes travel time of a secondary school. As such a significant positive effect is expected on this SA objective. The site is within 6-10 minutes travel time of a further education centre.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 5 minutes travel time of the nearest GP (a portion of the site to the east is within 6-10 minutes of the nearest GP). The site is also within 41-45 minutes travel time of the nearest hospital. A minor positive effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north and east on Huddersfield Road. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is within 6-10 minutes travel time of a local centre. The site is also within 6-10 minutes travel time of a town/district centre. As such a minor positive is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within close proximity of outdoor sports facilities which are accessible at Shelley College to the west within 160m. Two children's playgrounds are located to the east of the within 210m and 245m of the site respectively. A cemetery is also located to the east of the site within 330m.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.67ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.67ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 3 Agricultural Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.67ha) on mostly greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The site is within 740m of Springs Wood which has been identified as a Candidate Local Wildlife Site to the north east. The relative proximity of the site to this designated biodiversity feature may result in potential detrimental impacts, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, trampling etc and as such a minor negative effect is recorded for this SA objective. The effect is recorded as uncertain given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H300: Land west of Hanson Road, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is completely within 41-45 minutes of an employment node. Therefore, a minor negative effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time of a primary school and the majority of the site is within 26-30 minutes of a secondary school (although a small section at the southern end of the site is within 31-35 minutes of a secondary school). Therefore, there is likely to be a minor positive effect on this SA objective.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes of a GP (although a small section at the southern end of the site is within 16-20 minutes from a GP) and the whole site is within 51-55 minutes of a hospital. Overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m north-west and east of this site, and these residents could be exposed to noise and light pollution during construction of the site, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes of a local centre (although a small section at the southern end is within 21-25 minutes of a local centre) and the whole site is within 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace approximately 130m north of the site. Others include additional semi-natural and natural greenspace, a green corridor, amenity greenspace and an area for children and young people. In addition, there are a number of PRoW footpaths to the south and north-east of the site, and a bridleway is to the west. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable

SA Objectives	SA Score	Justification
which meets their needs.		housing. This site is 0.86ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.86ha) and on mostly greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This site is approximately 230m north-east of the Peak District National Park and therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect.</p> <p>The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 900m north-east of South Pennine Moors SAC, Peak District Moor SPA and and Dark Peak SSSI. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
of waste close to source.		This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to three of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified for SA objective 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H301: Gosling Hall Farm, Greenhead Lane, Almondbury, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 36-40 minutes travel time of an employment node, although the western side of the site is within 31-35 minutes of an employment node. Therefore, a negligible effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time of a primary school and the majority of the site is within 21-25 minutes of a secondary school (although a small section at the northern end of the site is within 26-30 minutes of a secondary school). Therefore, there is likely to be a minor positive effect on this SA objective.
4. Improve the health of local	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes of a GP (although a small section at the northern end of the site is within 16-20 minutes from a GP) and the whole site is within 41-45 minutes of a hospital. Overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m north, north-east and south-west of this site, and these residents could be exposed to noise and light pollution during construction of the site, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	++/++	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The far northern end of this site is within 5 minutes of a local centre and 11-15 minutes of a town/district centre, whereas the south-eastern corner is within 16-20 minutes of a local centre and 11-15 minutes of a town/district centre. In between, journey times to local services vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the far northern end of the site and minor positive for the south-eastern corner.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site encroaches into an area of semi-natural and natural greenspace which is directly adjacent to the site, and the development of this site could result in the area that falls within the site being lost. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by residents, including outdoor sports facilities, parks and gardens, amenity greenspace, a sports centre, additional semi-natural and natural greenspace and areas for children and young people. In addition, there are a number of PRoW footpaths to the east and south of the site. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.68ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.68ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.68ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The only biodiversity designation within 1km is Round Wood approved Local Wildlife Site which is approximately 860m north-east. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 6: local services and facilities, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objective 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H302: Tenter Hill Road, New Mill, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node, and therefore, a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of both a primary school and secondary school, and therefore a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 6-10 minutes of a GP and within 51-55 minutes of a hospital. Overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m north-west and south of this site, and these residents could be exposed to noise and light pollution during construction of the site, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the west of the site. Others include additional outdoor sports facilities, semi-natural and natural greenspace, a sports centre and areas for children and young people. In addition, there are a number of PRowW bridleways in the surrounding area, one of which runs along the southern and eastern edges of the site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is 0.58ha; therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3 education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H303: Land west of Ashford Park, Golcar, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 36-40 minutes travel time of an employment node, and therefore, a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of a primary school and 36-40 minutes of a secondary school, and therefore a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. Most of this site is within 6-10 minutes of a GP. It is also completely within 41-45 minutes of a hospital. Overall a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative

SA Objectives	SA Score	Justification
including avoiding noise and light pollution.		effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of residential properties within 100m north-east, south-east and south-west of this site, and these residents could be exposed to noise and light pollution during construction of the site, which results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility approximately 180m south of the site. Other facilities and areas of open space include additional outdoor sports facilities, amenity greenspace, cemeteries, semi-natural and natural greenspace, allotments, a park and garden and areas for children and young people. In addition, there are a number of PRow footpaths surrounding the site, and there is a bridleway approximately 280m north of the site which corresponds with these paths. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.6ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.6ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the	-?	This site is small (0.6ha) and on greenfield land; therefore development here could have a minor negative effect on this

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		<p>SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mostly within LCA F4: Colne (Slaitwhaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to five of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified for this site.		

H304: Land north of Barnsley Road, Denby Dale, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 31-35 minutes travel time of an employment node, and therefore, a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 21-25 minutes travel time of a primary school and 26-30 minutes of a secondary school. Therefore, a negligible effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 11-15 minutes of a GP and more than 60 minutes from a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative

SA Objectives	SA Score	Justification
including avoiding noise and light pollution.		effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A635 (Barnsley Road) and this could result in future residents being exposed to noise over the long term. A significant negative effect is therefore likely. In addition, there are a number of residential properties within 100m to the north, south, east and west, and these residents could be exposed to noise and light pollution during construction of the site, and this reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 16-20 minutes travel time of both a local centre and a town/district centre; therefore a minor positive effect is likely. A minor negative effect is likely overall.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is semi-natural and natural greenspace approximately 80m to the west. Other facilities and areas of open space include additional semi-natural and natural greenspace, outdoor sports facilities, a park and garden and area for children and young people. In addition, there are a number of PRoW footpaths surrounding the site, and there is a bridleway approximately 280m north of the site which corresponds with these paths. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.56ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.56ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the	-?	This site is small (0.56ha) and on greenfield land; therefore development here could have a minor negative effect on this

SA Objectives	SA Score	Justification
character of Kirklees and the quality of the landscape and townscape.		SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The only biodiversity or geodiversity site within 1km of this site is Denby Delph candidate Local Wildlife Site (approximately 980m south-west). Therefore, a minor negative effect is likely for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3, therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. A potential significant negative effect was identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H305: Wyke Lane, Oakenshaw, Bradford

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes travel time of a primary school and the majority of the site is within 26-30 minutes of a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 21-25 minutes travel time of a GP. The site is also completely within 41-45 minutes of

SA Objectives	SA Score	Justification
social care they need.		a hospital. Overall a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is surrounded by existing residential properties, and therefore these residents could be exposed to increased noise and light pollution during construction of the site. An overall significant negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	0	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and 21-25 minutes of a town/district centre; therefore a negligible effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There is an area of semi-natural and natural greenspace approximately 290m east of the site. In addition, there are a number of PRoW footpaths to the east and south-east of the site and there is an undesignated footpath, a PRoW bridleway and a national cycle route directly adjacent to the south. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.48ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The majority of the site is not within an area of high quality agricultural land with the exception of two small parts of the southern end of the site falling within grade 3. It is thought that the development of these areas could

SA Objectives	SA Score	Justification
		be avoided.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (3.48ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are two biodiversity designations within 1km of this site, including Railway Terrace Local Nature Reserve which is approximately 700m north-west and Hanging Wood approved Local Wildlife Site which is approximately 960m south-east. Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and mostly outside of flood zone 3 with the exception of a small part of the northern section of the site falling within zone 3, although it is thought that development could be avoided in this area. Overall, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H306: Yew Tree Road / Burn Road, Birchencliffe, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time of a primary school and 16-20 minutes from a secondary school and further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 11-15 minutes travel time of a GP and 16-20 minutes of a hospital; therefore a significant

SA Objectives	SA Score	Justification
social care they need.		positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties directly adjacent to the north of this site as well as within 100m to the west and south which could be affected by noise and light pollution during construction. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 of both a local centre and a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which are allotments, a park and garden and semi-natural and natural greenspace directly adjacent to the west of the site. Other facilities and areas of open space include outdoor sports facilities, additional semi-natural and nature greenspace, cemeteries and areas for children and young people. In addition, there is a bridleway to the east of the site as well as a local cycle route. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.55ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.55ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This site is relatively small (0.55ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
townscape.		The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Church of St Philip the Apostle (approximately 140m south) and Middle Burn Farmhouse (approximately 150m north-east). This site forms part of the area of open countryside which contributes to the setting of these assets. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There is one biodiversity designation within 1km of this site, this being Grimescar Wood approved Local Wildlife Site which is approximately 650m to the east. Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to all eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects have not been identified.		

H307: Land to the East and North-East of Scarr End Mill, Scarr End Lane, Earlsheaton, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is more than 60 minutes from primary school, secondary school and further education facilities, therefore a significant negative effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is more than 60 minutes from a GP and a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are existing residential properties directly adjacent to the north and south of this site and these receptors could experience noise and light pollution during construction of the site. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site more than 60 minutes from a local centre and town/district centre. Therefore, a significant negative effect is likely.
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is semi-natural and natural greenspace approximately 100m north of the site. Other facilities and areas of open space include outdoor sports facilities, additional semi-natural and nature greenspace, amenity greenspace cemeteries and areas for children and young people. In addition, there are a number of PRow footpaths to the north of the site. A significant positive effect is therefore likely.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.68ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.68ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is completely within grade 3 agricultural land which reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.68ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA N1: Emley Moor, as identified in the 2015 Landscape Character Assessment for Kirklees. This is an elevated, undulating farmland plateau with frequent woodland cover. The character is predominantly traditional rural, occupied by small villages.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Skelmanthorpe Conservation Area. This site forms part of the area of open countryside which contributes to the significance of this designation. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.

SA Objectives	SA Score	Justification
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside of flood zone 3 (with the exception of the western part of the site although development in this part may be avoidable); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure. Potential significant negative effects were identified for SA objectives 3: education, 4: health, 6: local services, 10: sustainable transport and 19: climate change. 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H308: Woodhead Road, Brockholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole site is within 21-25 minutes travel time of an employment node, and therefore, a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The far northern part of this site is within 6-10 minutes of a primary school and secondary school and 21-25 minutes of a further education facility, whereas the central to western part of the site is within 16-20 minutes of a primary school, 11-15 minutes of a secondary school and 21-25 minutes of a further education facility. In between, journey times to education facilities vary between those two extremes. Overall, a mixed effect is likely – potentially significant positive for the northern part of the site and minor positive for the central to western part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 6-10 minutes travel time of a GP, and the majority of the site is within 51-55 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A6024 (Woodhead Road) which could result in future residents being exposed to noise pollution over the longer term. Therefore, a significant negative effect is likely. There are also industrial buildings within close proximity to the north and west of the site which could also lead to noise pollution over the long term, and there are a number of existing residential properties within 100m, one of which is directly adjacent to the west, and these residents could be exposed to noise and light pollution during construction.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes of both a local centre and a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is a PRoW crossing this site which could be lost or disrupted as a result of the site being developed. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a green corridor which is directly adjacent to the east of the site. Other facilities and areas of open space include areas of semi-natural and natural greenspace, cemeteries, parks and gardens, outdoor sports facilities and areas for children and young people. In addition, there are a number of PRoW footpaths to the west, north-east and south-east. Therefore, a mixed effect is likely overall for this SA objective.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (3.72ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is also completely within an area classed as grade 3 agricultural land, and this reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (3.72ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in partly within LCA E1: Holmfirth-Meltham and partly within LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. LCA E1: Holmfirth-Meltham is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park. LCA G8: Holme River Valley is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Hagg Wood candidate Local Wildlife Site is approximately 230m south of this site. Therefore, this site is likely to have a significant negative effect on this SA objective. Brockholes and Round Wood, Brockholes Local Geological Site is approximately 335m to the east of the site.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure (part of a mixed effect overall), 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 5: amenity, 8: recreation and leisure (part of a mixed effect overall) and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H309: Land north of Red Lane, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 31-35 minutes travel time of an employment node, and therefore, a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The far south-eastern part of this site is within 5 minutes of a primary school and 21-25 minutes of a secondary school, whereas the far northern part of the site is within 6-10 minutes of a primary school and 31-35 minutes of a secondary school. Although journey times to education vary between those two extremes, a minor positive effect is likely for both overall.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 11-15 minutes travel time of a GP, and within 51-55 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m south, east and north of this site, as well as Meltham Moor Primary School, and these receptors could be exposed to noise and light pollution during construction of the site. Overall, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 16-20 minutes of a local centre and 6-10 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the north of the site. green corridor which is directly adjacent to the east of the site. Other facilities and areas of open space include areas of semi-natural and natural greenspace, a cemetery, amenity greenspace, a green corridor and an area for children and young people. In addition, there are a number of PRow footpaths to the north-east and there is a network of bridleways to the west. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.63ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.63ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>The Peak District National Park is approximately 390m south-west of this site and therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are three biodiversity designations within 1km of this site, including South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI, all of which are within 960m south-west of this site. Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to three of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation. A potential significant negative effect was identified for SA objective 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H310: Commercial Road, Skelmanthorpe, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This majority of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes of a primary school, secondary school and further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 6-10 minutes of a GP, and the whole site is within 51-55 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative

SA Objectives	SA Score	Justification
including avoiding noise and light pollution.		effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m to the north, west and south of this site, as well as Skelmanthorpe Primary and Nursery School. These receptors could be exposed to noise and light pollution during construction of the site, and this results in a minor negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of both a local centre and a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the west of the site. Other facilities and areas of open space include other outdoor sports facilities, amenity greenspace, allotments, parks and gardens and areas for children and young people. In addition, there are a number of PRow footpaths to the north and south of this site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.03ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (4.03ha) and on mostly greenfield land meaning that there is likely to be a minor negative effect on this objective. The whole of this site is also on grade 3 agricultural land, which reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is relatively small (4.03ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
		The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Skelmanthorpe Conservation Area (this site forms part of an open area which contributes to the significance of the designation). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Blacker Wood candidate Local Wildlife Site (approximately 380m north of the site), Park Gate Dyke approved Local Wildlife Site (approximately 690m north-east), and High Gate Wood candidate Local Wildlife Site (approximately 800m south-east). Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: sustainable transport and 19: climate change. There were no potential significant effects identified.		

H311: Gomersal Middle School, Land to the north of Oxford Road, Gomersal, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 5 minutes of a primary school and 11-15 minutes of a secondary school. The site is also completely within 16-20 minutes of a further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 6-10 minutes travel time of a GP and within 31-35 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A651 (Oxford Road) and this could result in future residents being exposed to noise pollution over the long term. A significant negative effect is therefore likely. In addition, there are a number of existing residential properties within 100m to the north and west and Gomersal Primary School and Gomersal Middle School lie to the north and south respectively. The proximity of these receptors reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes of a local centre, and the whole site is within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the south of the site. Other facilities and areas of open space include other outdoor sports facilities, amenity greenspace, areas for children and young people, cemeteries and areas of semi-natural and natural greenspace. In addition, there are a number of PRoW footpaths to the north and west of this site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.17ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.17ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. In addition, the majority of this site is also on grade 3 agricultural land, which reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (1.17ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There is one biodiversity designation within 1km of this site, this being Oakwell Park Local Nature Reserve and approved Local Wildlife Site which are approximately 600m north. Therefore, this site is likely to have a minor negative effect on this SA objective.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H312: Land north of Longwood Edge Road, Salendine Nook, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to employment nodes vary throughout this site. The northern part of the site is within 11-15 minutes travel time of the nearest employment node whereas the southern part of the site is within 41-45 minutes. In between those areas, journey times to the nearest employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected – significant positive for the northern part and minor negative for the southern part.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/-?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Levels of access to education facilities vary throughout this site. The western part of the site is within 11-15 minutes travel time of a primary school, while a small area in the eastern part is within 26-30 minutes. The eastern part of this site is within 11-15 minutes of a secondary school, while the southern part of the site is within 46-50 minutes. In between those areas, journey times to primary and secondary schools vary in between those three extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the western and far eastern parts and potentially minor negative for the southern area.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ +/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The north and western parts of the site are within 6-10 minutes travel time of a GP but an area in the south of the site is within 16-20 minutes. The north and west of the site is within 16-20 minutes of a hospital while an area in the south of the site is within 46-50 minutes. In between those areas, journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –significant positive for the north and western areas of the site and negligible for the southern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties to the north west of the site which may be affected by noise during the construction phase; therefore a minor negative effect on this SA objective is likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centres vary throughout this site. The north eastern part of the site is within 6-10 minutes travel time of a local centre and within 11-15 minutes of a town/district centre. However, the southern part of the site is within 16-20 minutes travel time of a local centre and within 26-30 minutes of a town/district centre. In between those areas, journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the north eastern part and minor negative effect for the southern area.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	The site is within an area of public playing fields, which could be lost as a result of housing development. However, the site is also adjacent to an area of allotments and approximately 180m from a children's play area to the north. Approximately 100m to the north west of the site is an area of amenity greenspace which includes a children's play area (approximately 125m from the site). To the south out the site is an area of semi-natural & natural greenspace approximately 5m from the site and a bowling green approximately 265m from the site. A mixed (significant positive and potential significant negative) effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (5.6ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (5.6ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is not within high quality agricultural land (it is classed as urban).</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and	--?	This is a relatively large site (5.6ha) on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.

SA Objectives	SA Score	Justification
townscape.		<p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Longwood Edge Conservation Area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>This site is approximately 180m from Longwood Edge Quarry Local Geological Site and approximately 940m from Shaw Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land; therefore a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access four of the eight features assessed; therefore a significant positive effect is likely.</p>
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of a mixed effect overall), 4: health (part of a mixed effect overall), 8: leisure and recreation (part of a mixed effect overall), 9: housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 8: leisure and recreation (part of a mixed effect overall), 11: efficient use of land, 12: landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H313: POL Burton Acres Lane, Kirkburton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The majority of the site is within 11-15 minutes travel time of the nearest employment node (although a small area to the north is within 16-20 minutes); therefore a minor positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of the site is within 6-10 minutes travel time of a primary school (with a small section in the north within 11-15 minutes) and within 11-15 minutes of a secondary school (although a small section to the north is within 16-20 minutes) so is likely to have a significant positive effect. The southern part of the site is also within 11-15 minutes of a further education institute and the northern part of the site is within 26-30 minutes.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+ / 0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. This southern part of the site is within 5 minutes travel time of a GP and within 41-45 minutes of a hospital. However, the northern part of the site is within 16-20 minutes of a GP and within 51-55 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive for the southern part and negligible for the northern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties surrounding the site which may be affected by noise during the construction phase; therefore a significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+ / -	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to local and town/district centres vary throughout this site. The southern part of the site is within 11-15 minutes of a local centre and within 5 minutes of a town/district centre whereas the northern part of the site is within 16-20 minutes of both a local and town/district centre. In between those areas journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected –minor positive effect for the southern part and minor negative effect for the northern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. 8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and	++	The north western boundary of the site is adjacent to an area of private playing fields. There is also an area of semi-natural & natural greenspace adjacent to the south western corner of the site. The site is also approximately 30m from a park and gardens which contains a children's play area (approximately 130m from the site) to the north east. Within 100m south of the site there is an area of amenity green space and an area of allotments. Approximately 150m to the

SA Objectives	SA Score	Justification
encourage their usage.		east of the site is an area of school playing fields and approximately 150m west of the site is an area of amenity greenspace which includes a children's play area. In addition, there are two PRoW footpaths approximately 450m south east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (4ha) on greenfield land therefore a minor positive effect on this SA objective is likely. The majority of the site is also within high quality agricultural land (is classed as grade 3 with an area in the south classed as grade 4).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (4ha) on greenfield land; therefore development here could have a minor positive effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Kirkburton Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 90m from Burton Dean Quarry, Kirkburton Local Geological Site and approximately 790m from the Lepton Great Wood Local Wildlife Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	0	This site is on greenfield land and the site is outside of flood zones 2 and 3. Therefore a negligible effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor positive effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access six of the eight features assessed; therefore a significant positive effect is likely.
Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 5: amenity and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H314: Land South of Roaine Drive, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is over 60 minutes travel time of the nearest employment node; therefore a significant effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 11-15 minutes travel time of a primary school and the majority of the site is within 31-35 minutes travel time of a secondary school (with a small section to the north within 26-30 minutes) so is likely to have a minor positive effect. Most of the site is over 60 minutes of a further education institute (with an area to the east within 51-55 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 36-40 minutes travel time of a GP and over 60 minutes travel time of a hospital; therefore a significant negative effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are several existing residential properties within close proximity of the site to the north west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes of a local centre and within 21-25 minutes travel time of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is approximately 120m from an area of semi-natural & natural greenspace to the north west. The site is also approximately 390m from an area of park and garden which contains a children's playground and 450m from an area of semi-natural and natural greenspace to the north. Approximately 315m south of the site is an area of private playing fields. In addition, there is a PRow footpath approximately 55m to the north of the site and one footpath approximately 115m to the east of the site. Therefore, a significant positive effect is expected for this objective.</p>

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.48ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to one of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.48ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.48ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies mainly within LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment due to the uncertain potential impacts on the adjoining Underbank Conservation Area. The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as entirely 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation, and potential significant negative effects were identified in relation to SA objectives 1: education and 3: health. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H315: Land north east of Manor Park Gardens, Birkenshaw, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. Levels of access to an employment node vary throughout this site. The northern part of this site is within 26-30 minutes travel time of the nearest employment node whereas the southern part of the site is 16-20 minutes away from employment. In between those areas journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –significant positive for the southern part and minor positive for the northern part of the site.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 11-15 minutes from a primary school (although a small section in the south west is within 6-10). Levels of access to a secondary school are very variable throughout the site. The western part of the site is within 6-10 minutes travel time of a secondary school whereas the north eastern part of this site is within 11-15 minutes of a secondary school. In between the far western and north eastern parts of the site, journey times to secondary and further education facilities vary in between those two extremes. However, overall a significant positive effect is expected for this objective. Travel times to the nearest further education institute also vary throughout the site – 21-25 minutes in the south west and 31-35 minutes in the north.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The south western part of the site is within 6-10 minutes travel time of a GP and within 41-45 minutes of a hospital. The northern part of the site is within 16-20 minutes of a GP and within 51-55 minutes of a hospital. In between those areas journey times to healthcare facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – potentially minor positive for the south western part and potentially negligible for the northern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the west and north east which may be affected by noise during the construction phase. There is also a school adjacent to the northern boundary of the site which could also be affected by noise during the construction phase. In addition, the southern boundary of the site is adjacent to the M62 motorway which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Most of this site is within 16-20 minutes travel time of a town/district centre (with a small section in the north within 21-25 minutes). Levels of access to a local centre are very variable throughout the site; however. The western part of the site is within 6-10 minutes of a town/district centre however the eastern part of the site is 21-25 minutes from a town/district centre. In between the far eastern and western parts of the site, journey times to local and town/district centres vary in between those two extremes. Therefore a mixed (negligible for the west and minor negative for the east) effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is within 5m from school playing fields in the north, approximately 295m from a children's playground to the north west and approximately 270m from a public playing field area containing a children's playground to the north east. Approximately 350m to the east is an area of allotments which is adjacent to an area of amenity greenspace which includes a children's play area (approximately 405m from the site). Also, to the north of the site lies an area of semi-natural & natural greenspace approximately 530m metres from the site. In addition, there is a PRoW footpath that runs adjacent to the northern boundary of the site. Another footpath is approximately 125m to the east of the site however part of the path is within another housing site option. Therefore, a significant positive effect is expected for this objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.38ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.</p>

SA Objectives	SA Score	Justification
		time of a secondary school (with a small area to the north within 31-35 minutes) so is likely to have a minor positive effect. The site is also within 31-35 minutes of a further education institute.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. This site is within 6-10 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within close proximity of the site to the south and east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. This site is within 11-15 minutes of a local centre and the majority of the site is within 6-10 minutes travel time of a town/district centre (although a small area to the south west is within 5 minutes); therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 75m from a children's playground and approximately 140m from a private playing fields to the south. There is also an area of semi-natural & natural greenspace within 75m to the east of the site; however it is within another housing option site. Approximately 300m and 350m to the north are two areas of allotments. Also, to the north of the site lies an area of semi-natural & natural greenspace approximately 390m metres from the site and an area of private playing fields approximately 490m from the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.86ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.

SA Objectives	SA Score	Justification
encourages people to make use of sustainable and active modes of transport.		In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.86ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This is a relatively small site (0.86ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is within 500m of the Peak District National Park. Therefore overall a significant negative effect is expected for this objective. The site lies in LCA F4: Colne (Slaithwaite, Marsden), as identified in the 2015 Landscape Character Assessment for Kirklees. This is the deeply incised valley of the River Colne. Woodland cover is found clinging to the steep valley sides and cloughs. There are dense ribbons of urban and industrial development along the valley floors and sides. It is a busy landscape with lots of movement owing to transport corridors and urban development along the valley floor.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is approximately 245m from South Pennine Moors Site of Special Scientific Interest/Special Area of Conservation/Special Protection Area and approximately 390m from Butterley Cutting, Marsden Local Geological Site; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.</p>
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: leisure and recreation, 10: sustainable transport, 19: climate change, and potential significant negative effects were identified in relation to SA objectives 12: character and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.</p>		

H317: Land to north east of Moor View, Mirfield Moor, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>Levels of access to employment nodes vary throughout this site. The north eastern part of this site is within 11-15 minutes travel time of the nearest employment node whereas an area in the south of the site is within 21-25 minutes. In between those parts of the site, journey times to an employment node vary in between those two extremes. Therefore a mixed effect on this objective is expected –significant positive for the north eastern area and minor positive for the area in the south.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects

SA Objectives	SA Score	Justification
		<p>will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>Almost the entire site is within 11-15 minutes travel time of a primary school (a small area to the west is within 16-20 minutes) and the whole site is within 11-15 minutes travel time of a secondary school; therefore a significant positive effect is likely. The majority of the site is also within 11-15 minutes of a further education institute (areas in the east and west are within 16-20 minutes).</p>
<p>4. Improve the health of local people and ensure that they can access the health and social care they need.</p>	<p>+ / 0</p>	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>Levels of access to healthcare facilities vary throughout this site. The most accessible part of the site is the north east corner which is within 11-15 minutes travel time of a GP and within 31-35 minutes travel time of a hospital. The least accessible areas of the site are the western part and south eastern corner which are within 16-20 minutes of a GP and 36-40 minutes from a hospital. Therefore a mixed effect on this objective is expected – minor positive for the north eastern corner and negligible for the western part and south eastern corner. The site is not within or adjacent to an AQMA.</p>
<p>5. Protect local amenity including avoiding noise and light pollution.</p>	<p>---</p>	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and west which may be affected by noise during the construction phase. In addition, the north western part of the site is adjacent to the A62 (Huddersfield Road) and there appear to be commercial or industrial units to the north of the site which may result in noise pollution affecting residents in the longer-term. A significant negative effect on this SA objective is therefore likely.</p>
<p>6. Retain and enhance access to local services and facilities.</p>	<p>0 / -</p>	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>Levels of access to services and facilities vary throughout this site. The least accessible part of the site is a section in the south eastern corner which is within 16-20 minutes of a local centre and within 21-25 minutes of a town/district centre. The centre of the site is the most accessible part of the site as it is within 6-10 minutes of a local centre and within 16-20 minutes of a town/district centre. In between those parts of the site, journey times to local services and facilities vary in between those two extremes. Therefore a mixed effect on this objective is expected – negligible effect for the centre of the site and minor negative effect for the south eastern corner.</p>
<p>7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.</p>	<p>0</p>	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the</p>

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 325m to the west of the site is an area of amenity greenspace. The site is approximately 360m from an area of public playing fields which contains a children's play area to the north west. Also within 490m of the site is an area of park and gardens and approximately 545m from the site is an area of school playing fields both to the south. Approximately 435m to the north of the site is an area of private playing fields and approximately 515m to the north is an area of park and gardens which contains two areas of children's play provision. A public footpath runs along part of the northern boundary of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.94ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.94ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. Approximately two thirds of the site is within an area of Grade 3 agricultural land (the rest is classed as urban land), which reinforces the minor negative effect.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.94ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	-?	This site is approximately 495m from Sunny Bank Ponds Local Nature Reserve and Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport, 19: climate change, and a potential significant negative effect was identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H318: Land north of Barnsley Road, Denby Dale, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 21-25 minutes travel time of a primary school (although a small area to the north east is within 16-20 minutes) and the site is within 26-30 minutes travel time of a secondary school so is likely to have a negligible effect. The site is also within 31-35 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and over 60 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north which may be affected by noise during the construction phase. The southern boundary of the site is also adjacent to the A635 (Barnsley Road) which may mean that residents in the southern part of the site are affected by road noise. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes of a local centre and within 16-20 minutes travel time of a town/district centre; therefore a minor negative effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 130m from an area of semi-natural & natural greenspace and approximately 240m from a private tennis club to the north west. Approximately 185m to the north of the site is an area of semi-natural & natural greenspace which is adjacent to an area of park and gardens which contains a children's play area (approximately 200m from the site). Also, approximately 165m to the east of the site is an area of semi-natural & natural greenspace. In addition, a PRoW footpath runs adjacent to the eastern boundary of the site and another footpath begins approximately 30m south east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.44ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.44ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is not within an area of high quality agricultural land (the land is classed as urban).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.44ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to two of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: leisure and recreation and potential significant negative effects were identified in relation to SA objective 5: amenity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H319: Land to the south west of 117, Westfield Lane, Wyke, Bradford

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The majority of the site is within 16-20 minutes travel time of the nearest employment node (although a small area to the north east is within 11-15 minutes); therefore a significant effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and the majority of the site is within 11-15 minutes travel time of a secondary school (with a small area in the east within 6-10 minutes) so is likely to have a significant positive effect. The majority of the site is also within 11-15 minutes of a further education institute (with a small area to the south west within 16-20 minutes).</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 6-10 minutes travel time of a GP and within 51-55 minutes travel time of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the north, south and south east which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 6-10 minutes of a local centre (with a small area to the north east within 5 minutes) and within 16-20 minutes travel time of a town/district centre (with a small area to the east within 11-15 minutes); therefore a negligible effect is likely.</p>

SA Objectives	SA Score	Justification
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is approximately 160m from school playing fields, approximately 170m from an area of allotments and approximately 255m from an area of parks and gardens, which contain two children's play areas, all to the south of the site. Also approximately 510m to the east of the site lies an area of amenity greenspace. There are public footpaths to the south and east of the site, within approximately 70m. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.3ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (1.3ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The majority of the site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (1.3ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is over 1km from any designated biodiversity or geodiversity site; therefore development here could have a negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to the SA objectives.		

H320: Land to the east of Balmfield Crescent, Roberttown, Liversedge

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary school and the majority of the site is within 11-15 minutes travel time of a secondary school (with a small area to the east within 16-20 minutes) so is likely to have a significant positive effect. The site is also within 16-20 minutes of a further education institute.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 16-20 minutes travel time of a GP (with a small area to the north west within 11-15 minutes) and within 41-45 minutes travel time of a hospital (with a small area to the west within 36-40 minutes); therefore a negligible effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>There are a number of existing residential properties within close proximity of the site to the west which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes of a local centre and within 16-20 minutes travel time of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	Approximately 110m north east of the site is an area of public playing fields which includes a children's play area. Approximately 420m to the west of the site is an area of private playing fields and approximately 470m to the east is an area of school playing fields. In addition, there is a PRoW footpath that runs adjacent to the southern boundary of the site and another two footpaths are within 230m east of the site. Therefore, a significant positive effect is expected for this objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.7ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.7ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is also within an area of high quality agricultural land (the land is classed as grade 3).
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (0.7ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment as it is considered unlikely to result in any harm to any designated heritage asset. The effect on this SA objective is therefore negligible and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance	-?	This site is approximately 895m from Sunny Bank Ponds Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.

SA Objectives	SA Score	Justification
biodiversity and geodiversity.		
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly or entirely 'green' in terms of its access to five of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to SA objectives		

H321: Land at Cherrywell Farm, New Popplewell Lane, Scholes, Cleckheaton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The site is within 16-20 minutes travel time of the nearest employment node. As such a significant positive effect is expected on this SA objective.

SA Objectives	SA Score	Justification
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 16-20 minutes travel time of a primary school (the northern part of the site is within 11-15 minutes travel time of a primary school). The southern part of the site is within 21-25 minutes travel time of a secondary school and the northern part is within 11-15 minutes travel time of a secondary school. The areas in between these two extremes are located at variable travel times of a secondary school. Overall a mixed effect (negligible effect and minor positive effect) on this SA objective is expected.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is within 21-25 minutes travel time of the nearest GP (a portion of the site to the north is within 16-20 minutes of the nearest GP). The site is also within 41-45 minutes travel time of the nearest hospital. A negligible effect is therefore expected on this SA objective.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the north on New Popplewell Lane. These properties may be affected by noise during the construction phase and a minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is within 11-15 minutes travel time of a local centre (the north part of the site is within 6-10 minutes travel time of the nearest local centre). The majority of the site is also within 21-25 minutes travel time of a town/district centre (the north part of the site is within 16-20 minutes of a town/district centre). As such a negligible effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is within 40m of a semi-natural and natural greenspace to the north on New Popplewell Lane. Outdoor sports facilities are also accessible here by the cricket ground and are within 55m of the site to the north west. Amenity greenspace is located within 430m to the north of the site at Westfield Lane. A sizeable park which includes two children's playgrounds is located within 460m of the site to the north west by Old Popplewell Lane.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.37ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.37ha) on mostly greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.37ha) on mostly greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA K1: Thornton-Queensbury, as identified in the 2015 Landscape Character Assessment for Kirklees. The LCA comprises pockets of higher gently undulating ground. Woodland cover is generally marginal. Although this area is predominantly farmland with relatively small settlements, the surrounding urban centres and major transport corridors have a pervading influence, reducing levels of tranquillity.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may

SA Objectives	SA Score	Justification
		exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within close proximity of any designated biodiversity features; Hanging Wood (additional) (a Candidate Local Wildlife Site) is the closest of such features but is located 2.34km to the north east and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of mostly greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to three of the eight features assessed; therefore a minor positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure. No significant negative effects were identified for this site in relation to any of the SA objectives. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.</p>		

H322

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people’s ability to access jobs.</p> <p>The northern part of the site is located within 16-20 minutes travel time of the nearest employment node while part of the site to the south is located within 6-10 minutes travel time of the nearest employment node. Overall a significant positive effect is expected on this SA objective.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is within 6-10 minutes travel time of a primary school (the northern western part of the site is within 11-15 minutes travel time of a primary school). The majority of the site is located within 11-15 minutes travel time of a secondary school (a part of the site to the west is located within 16-20 minutes travel time of a secondary school). Overall a significant positive effect on this SA objective is expected. The majority of the site is located within 11-15 minutes travel time of a centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents’ health.</p> <p>The site is located within variable travel times of a GP. The southern part of the site is located within 5 minutes travel time of a GP while the north western part of the site is located within 11-15 minutes travel time of a GP. The majority of the site is located within 51-5 minutes travel time of a hospital (part of the site to the west is located within 46-50 minutes travel time of a hospital). The site is also within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective for the entire site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the west on Bluehills Lane. These properties may be affected by</p>

SA Objectives	SA Score	Justification
		noise during the construction phase and a minor negative effect on this SA objective is therefore likely.
6. Retain and enhance access to local services and facilities.	+/-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within variable travel times of the nearest local centre and town/district centre. The southern part of the site is located within 6-10 minutes travel time of the nearest local centre while the north western part of the site is located within 16-20 minutes travel time of the nearest local centre. The southern part of the site is also located within 6-10 minutes travel time of the nearest town/district centre while the central part of the site is located within 16-20 minutes travel time of the nearest town/district centre. As such an overall mixed effect (minor positive/minor negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is adjacent to a semi-natural and natural greenspace to the west. An amenity greenspace and children's playground are also located to the west within 65m by Bromley Road. The closest outdoor sports facilities are provided within 100m of the site to the south.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (7.23ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (7.23ha) on greenfield land; therefore a significant negative effect on this SA objective is likely. The site is located mostly on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the	--?	This is a relatively large site (7.23ha) on greenfield land; therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G10: River Dearne Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises relatively broad valleys with a high level of broadleaved woodland cover. The main valley floor is densely settled and has a peri-urban feel, while the tributary sections of the LCA are generally more tranquil and rural and are only crossed by minor roads.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	-?	<p>Historic England has rated this site as 'yellow' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site could avoid damage to Denby Dale Wesleyan Methodist Church Grade II Listed Building to the east of the site, provided that proposed Local Plan policies to protect the historic environment are implemented. The effect on this SA objective is therefore likely to be minor negative although this is uncertain. Uncertainty also exists as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>The site is not within close proximity of any designated biodiversity features; Denby Delph (a Candidate Local Wildlife Site) is the closest of such features but is located 1.10km to the south west and as such a negligible effect is recorded on this SA objective. Given that there may be opportunities to promote habitat connectivity through the inclusion of green infrastructure with any development the effect is noted to be uncertain.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. The southern eastern part of the site is also located within 6-10 minutes travel time of the nearest town/district centre while the northern part of the site is located within 16-20 minutes travel time of the nearest town/district centre. As such an overall mixed effect (minor positive/minor negative) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	The site is in close proximity to a number of open spaces which could be used by residents. The site is located within 20m of a green corridor which is to the west. A semi-natural and natural reenspace is located to the south east of the site within 20m. A cemetery is located within 140m of the site to the west. A small park is located within 140m of the site to the south by West Street.

SA Objectives	SA Score	Justification
usage.		As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.23ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to five out of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively large site (3.23ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively large site (3.23ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 995m from Morley Spring Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not	-	This site is located on greenfield land and is located mostly outside of flood zones 2 and 3 (a small part of the eastern edge of the site is within flood zone 3); therefore a minor negative effect is likely given that the development of new housing on this greenfield land would increase the area of impermeable surfaces and could therefore increase overall flood risk in Kirklees.

SA Objectives	SA Score	Justification
contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to five of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health (this score was given as part of an overall mixed effect), 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H325: Northstead, Ravensthorpe, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 26-30 minutes travel time of an employment node (a small part of the site to the east is located within 31-35 minutes travel time of an employment node). A minor positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
Entrepreneurship.		
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 16-20 minutes travel time of a primary school (a small part of the site to the west is located within 11-15 minutes travel time of a primary school). The majority of the site is also located within 31-35 minutes travel time of a secondary school (a small part of the site to the west is located within 26-30 minutes travel time of a secondary school). Overall a negligible effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 21-25 minutes travel time of a GP. The majority of the site is located within 46-50 minutes travel time of the nearest hospital (a small part of the site to the south west is located within 41-45 minutes travel time of a hospital). Overall a negligible effect is expected on this SA objective for this site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south west on Northstead. These properties may be negatively impacted upon by noise pollution during the construction phase and as such a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 16-20 minutes travel times of the nearest local centre. The majority of the site is located within 11-15 minutes travel time of the nearest town/district centre (the south eastern part of the site is located within 16-20 minutes travel time of the nearest town/district centre). As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is located adjacent to a park to the north. A number of allotments are also adjacent to the site to the south east and north west. An amenity greenspace is located within 135m of the site to the south east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.78ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to one out of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.78ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.78ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This site is classed as 'green' in terms of its access to one of the eight features assessed; therefore a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and potential significant negative effects were identified for this site in relation to SA objective 16: flood risk. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H326: Land north of Longwood Gate, Longwood, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of the site is located within 31-35 minutes travel time of an employment node (parts of the site to the east and to the west are located within 26-30 minutes travel time of an employment node). A negligible effect is expected on this SA objective.
2. Achieve an economy	0	The location of housing sites will not affect the success of the local economy. While housing development may result in

SA Objectives	SA Score	Justification
better capable of growth through increasing investment, innovation and Entrepreneurship.		job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of a primary school (a small part of the site to the north is located within 11-15 minutes travel time of a primary school). The site is also located within 36-40 minutes travel time of a secondary school. Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 6-10 minutes travel time of a GP (parts of the site to the west and to the east are located within 5 minutes ravel time of a GP). The majority of the site is located within 36-40 minutes travel time of the nearest hospital (a small parts of the site to the west and the east are located within 31-35 minutes travel time of a hospital). Overall a minor positive effect is expected on this SA objective for this site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is adjacent to existing residential properties to the south on Longwood Gate. These properties may be negatively impacted upon by noise pollution during the construction phase and as such a minor negative effect on this SA objective is likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel times of the nearest local centre. The majority of the site is located within 16-20 minutes travel time of the nearest town/district cnetre (the south eastern part of the site and the north wesern part of the site are located within 11-15 minutes travel time of the nearest town/district centre). As such a negligible effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>The site is on land which has been designated as an amenity greenspace to the south and as a semi-neutral and natural greenspace to the north. Development at this location may result in the loss of these open space designations and as such a potential significant negative effect on this SA objective is identified. The site also is in close proximity to a number of open spaces which could be used by residents. Allotments are located within 85m of the site to the south west. A small park which includes a children's playground is located to the west of the site within 185m. The nearest cemetery to the site is located within 240m to the south east.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is also expected on this SA objective and overall a mixed effect (significant positive/potential significant negative) is likely.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four out of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.46ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.46ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly within an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on five Grade II Listed tenter posts which run across the site (the loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to	-?	This site is approximately 905m from Longwood Edge Quarry, Huddersfield which has been designated as a Local

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		Geological Site to the north west; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not located within flood zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing at this location would increase the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to four of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 8: recreation and leisure (it should be noted that this positive was part of an overall mixed effect expected on this SA objective), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 8: recreation and leisure (it should be noted that this negative was part of an overall mixed effect expected on this SA objective). These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H327: Land between New Hey Road and M62, Outlane, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The site is located within 11-15 minutes travel time of an employment node. A significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 5 minutes travel time of a primary school (a small part of the site to the west is located within 6-10 minutes travel time of a primary school). The site is also located within 26-30 minutes travel time of a secondary school. Overall a minor positive effect is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The site is located within 6-10 minutes travel time of a GP. The site is also located within 16-20 minutes travel time of the nearest hospital. Overall a significant positive effect is expected on this SA objective for this site.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located between the M62 and A640. Housing development at this location may be adversely impacted upon by noise pollution in the longer term and as such a significant negative effect is expected on this SA objective.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel times of the nearest local centre. The site is also located within 11-15 minutes travel time of the nearest town/district centre. As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the

SA Objectives	SA Score	Justification
		effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. A children's playground is located to the south west of the site within 95m by new Hey Road. Outdoor sports facilities are located within 225m of the site to the south west. The site is also located within 445m of a small park which is by Roamn Close and alos provides access to a children's playground.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.46ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Grade 4 Agricultural Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.46ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to	-?	This site is approximately 880m from Old Lindley Moor, Huddersfield which has been designated as a Local Geological

SA Objectives	SA Score	Justification
protect and enhance biodiversity and geodiversity.		Site to the north east; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not located within flood zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing at this location would increase the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to seven of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation and leisure, 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objective 5: amenity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.		

H328: Land south east of Shillbank View, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
local people, and ensure that they are accessible.		The site is located within 16-20 minutes travel time of an employment node. A significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The site is located within 6-10 minutes travel time of a primary school. The site is also located within 16-20 minutes travel time of a secondary school. Overall a significant positive effect is expected on this SA objective. The site is located within 21-25 minutes travel time of a centre for further education.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 16-20 minutes travel time of a GP (the northern part of the site is located within 11-15 minutes travel time of a GP). The site is also located within 41-45 minutes travel time of the nearest hospital. Overall a negligible effect is expected on this SA objective for this site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located in close proximity to existing residential properties to the north west on Shillbank View and to the east on Shillbank Avenue. Development at this location may adversely impact upon these identified properties in terms of noise pollution during the construction phase and as such a minor negative effect is likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The site is located within 6-10 minutes travel times of the nearest local centre. The site is also located within 11-15 minutes travel time of the nearest town/district centre. As such a minor positive effect is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced

SA Objectives	SA Score	Justification
of crime.		by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is adjacent to outdoor sports facilities to the south. A small park is located to the north west within 175m. A cemetery is located within 260m of the site to the south west by Saint Mary's Church. More parkland and outdoor sports facilities are located within 310m to the south east of the site at Holroyd Park.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.84ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to four six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (0.84ha) on greenfield land; therefore a minor negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (0.84ha) on greenfield land; therefore development here is expected to have a minor negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Castle Hall Hill motte and bailey castle Scheduled Monument and Grade II Listed building Saint Mary's Church and it's tower which is also Grade II Listed (the loss of this area and its subsequent development could harm elements which contribute to the significance of these buildings). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.

SA Objectives	SA Score	Justification
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	This site is not located in close proximity to any designated biodiversity or geodiversity sites. The closest of such sites is Lower Spen Wildlife Area (a Local Nature Reserve and Local Wildlife Site) which is located approximately 1.05km to the east of the site. As such a negligible effect is recorded for this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is located on greenfield land and is not located within flood zone 2 or 3; therefore a minor negative effect is likely given that the development of new housing at this location would increase the area of impermeable surfaces in Kirklees.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. Development at this site would make use of greenfield land meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: transport and 19: climate change. No potential significant negative effects were identified for this site in relation to any of the SA objectives against which it was assessed. These issues will need to be considered further in terms of enhancement, which may be achieved through Local Plan policies.		

H329: Busk Farm, Northfield Lane, Highburton

SA Objectives	SA Score	Justification
1: Increase the number and range of employment	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.

SA Objectives	SA Score	Justification
opportunities available for local people, and ensure that they are accessible.		The site is located within variable travel times of the nearest employment node. The south eastern corner and the north eastern corner are both located within 16-20 minutes travel time of the nearest employment node. The eastern part of the site is located within 5 minutes travel time of the nearest employment node. Overall a significant positive effect is expected on this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of the site is located within 6-10 minutes travel time of a primary school (the eastern edge of the site is located within 11-15 minutes travel time of a primary school). The site is located within variable travel times of the nearest secondary school. The eastern edge of the site is located within 21-25 minutes travel time of a secondary school while the southern part of the site is located within 11-15 minutes travel time of a secondary school. Overall a mixed effect (significant positive/ minor positive) is expected on this SA objective.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of the site is located within 11-15 minutes travel time of a GP (some of the eastern edge of the site is located within 16-20 minutes travel time of a GP). The site is located within variable travel times of the nearest hospital. The south eastern corner of the site is located within 51-55 minutes travel time of the nearest hospital while the south western and north western corners of the site are located within 41-45 minutes travel time of the nearest hospital. Overall a minor positive effect is expected on this SA objective for this site.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is located in close proximity to existing residential properties to the south west on Primrose Lane. Development at this location may adversely impact upon these identified properties in terms of noise pollution during the construction phase and as such a minor negative effect is likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	+/0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of the site is located within 11-15 minutes travel times of the nearest local centre (the eastern edge of the site is located within 16-20 minutes travel time of the nearest local centre). The site is located within variable travel times of the nearest town/district centre. The eastern part of the site is located within 21-25 minutes travel time of a town/district centre while the western part of the site is located within 11-15 minutes travel time of a town/district centre. As such a mixed effect (minor positive/negligible) is expected on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	<p>The site is in close proximity to a number of open spaces which could be used by residents. The site is adjacent to a green corridor to the west. A semi-natural and natural greenspace is located within 100m of the site to the west. Outdoor sports facilities can be accessed within 125m of the site to the south east. The site is located approximately 295m from a Local Nature reserve which is to the west.</p> <p>As such given that the relative close proximity of these open spaces to the site may encourage new residents to make use of them a significant positive effect is expected on this SA objective. The site is also on land which contains a footpath however and given that development at this location may result in a loss of this Public Right of Way a potential significant negative effect is also recorded for this SA objective. Overall a mixed effect (significant positive/potential significant negative) is expected on this SA objective.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+ +	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (8.85ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+ +	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (8.85ha) on mostly greenfield land (some of the site to the south west has previously been developed); therefore a significant negative effect on this SA objective is likely. The site is located on land which has been identified as Urban Land to the north and as grade 3 Agricultural Land to the south.</p>

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (8.85ha) on mostly greenfield land (some of the site to the south west has previously been developed); therefore development here is expected to have a significant negative effect on this SA objective. This impact is uncertain given that it is dependent on the design of the development.</p> <p>The site is not within close proximity of the Peak District National Park.</p> <p>The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Highburton Conservation Area (the loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of the Conservation Area). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	<p>This site is approximately 210m from Lepton Great Wood which has been designated as a Candidate Local Wildlife Site and also a Local Geological Site to the north east. Carr Wood is another Candidate Local Wildlife Site and is located within 840m of the site to the west. Local Geological Site Burton Dean Quarry, Kirkburton is located to the south of the site within 630m. Given the close proximity of designated biodiversity and geodiversity sites therefore development at this location could have a significant negative effect on this SA Objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is located on mostly greenfield land (some of the site to the south west has previously been developed) and is mostly not located within flood zone 2 or 3 (the most northerly part of the site is located within flood zone 3); therefore a minor negative effect is likely given that the development of new housing at this location would increase the area of impermeable surfaces in Kirklees.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>Development at this site would make use of mostly greenfield land (some of the site to the south west has previously been developed) meaning there is likely to be little opportunity to reuse material already onsite; therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. This site is classed as 'green' in terms of its access to six of the eight features assessed; therefore a significant positive effect is likely.
<p>Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education (this score has given as part of an overall mixed effect), 8: recreation and leisure (this score was given as part of an overall mixed effect), 10: transport and 19: climate change and potential significant negative effects were identified for this site in relation to SA objectives 8: recreation and leisure (this score was given as part of an overall mixed effect), 11: land use, 12: townscape and landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of enhancement and/or mitigation, which may be achieved through Local Plan policies.</p>		

H330: Land north of Red Lane, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The south-east part of this site is within 31-35 minutes travel time of an employment node, whereas a small part of the site in the south-west is more than 60 minutes travel time of an employment node. In between, journey times to education facilities vary between those two extremes. Overall, a mixed effect is likely – potentially negligible for the south-east of the site and significant negative for the small part in the west.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The south-eastern part of this site is within 6-10 minutes travel time of a primary school and 26-30 minutes from a secondary school, whereas a small part of the site in the south-west is within 36-40 minutes of a primary school and more than 60 minutes from a secondary school. In between, journey times to education facilities vary between those

SA Objectives	SA Score	Justification
		two extremes. Overall a mixed effect is likely – minor positive for the south-eastern part and a significant negative effect for the small part of the site in the south-west.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The north-eastern part of this site is within 6-10 minutes from a GP and 51-55 minutes from a hospital, whereas a small section of the site in the south-west is more than 60 minutes from a GP and a hospital. In between, journey times to health facilities vary between those two extremes. Overall, a mixed effect is likely – minor positive for the north-eastern part and significant negative for the small part of the site in the north-west. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m to the east and west and Meltham Moor Primary School is to the east. These receptors could be exposed to noise and light pollution during construction, and a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The eastern part of this site is within 16-20 minutes of a local centre and 6-10 minutes from a town/district centre, whereas a small section of the south-western part of the site is more than 60 minutes from a local centre and 36-40 minutes from a town/district centre. In between, journey times to local services vary between those two extremes. Overall, a mixed effect is likely – minor positive for the eastern part and significant negative for a small section of the south-western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility directly adjacent to the east of the site. Other facilities and areas of open space include other semi-natural and natural greenspace, a green corridor, areas for children and young people and amenity greenspace. In addition, there are a number of PRoW footpaths to the east of this site, and there are a number of bridleways surrounding the site, one of which is directly adjacent to the north. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (16.69ha); therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	--	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (16.69ha) and on greenfield land meaning that there is likely to be a significant negative effect on this objective. This site is not in an area of quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	The site is directly adjacent to the Peak District National Park; therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect. The site lies in LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Oldfield Hill Scheduled Monument (the loss of this area of countryside would harm elements that contribute to the setting of the Scheduled Monument). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI are all approximately 730m west of this site. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	--	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was not classed as 'green' in terms of its access to any of the eight features assessed. Therefore, a significant negative effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure and 9: housing. Potential significant negative effects were identified for SA objectives 1: employment, 3: education, 4: health, 6: local services, 10: sustainable transport, 11: use of land, 12: character and landscape and 19: climate change. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H331: Land off River Holme View, Brockholes, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 36-40 minutes travel time of an employment node, and therefore, a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The south-west corner of this site falls within 16-20 minutes of a primary school, 6-10 minutes of a secondary school and 26-30 minutes of a further education facility. The south-eastern corner of this site is within 6-10 minutes of a primary school, 6-10 minutes of a secondary school and 31-35 minutes of a further education facility. In between, journey times to education facilities vary between those two extremes. Overall a mixed effect is likely – significant positive for the south-eastern part and minor positive for the south-western part.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 11-15 minutes travel time of a GP and the majority of the site is within 46-50 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is directly adjacent to the A616 (New Mill Road) and this could result in future residents being exposed to noise pollution over the long term. A significant negative effect is therefore likely. In addition, the site is also within 100m of sensitive receptors, including existing residential properties to the north, east and west, and a caravan park to the south. The proximity of these receptors reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	This site is on land currently designated as semi-natural greenspace and it is likely that the development of this site would result in this asset being lost. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is another area of semi-natural and natural greenspace adjacent to the east. Additional facilities and area of open space include parks and gardens, green corridors, areas for children and young people and outdoor sports facilities. There is a PRow footpath directly adjacent to the west of this site and there are numerous other footpaths to the east and south. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.47ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.47ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.47ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G8: Holme River Valley, as identified in the 2015 Landscape Character Assessment for Kirklees. This is the main valley of the River Holme, and it is a densely settled landscape. It is generally low lying and enclosed, with frequent deciduous woodland along watercourses and on the steeper slopes.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are several biodiversity and geodiversity designations within 1km of this site, including Hagg Wood candidate Local Wildlife Site (directly adjacent to the west), Round Wood approved Local Wildlife Site (approximately 430m north-east), Cliff Wood candidate Local Wildlife Site (approximately 720m north) and Brockholes and Roundholes Local Geological Site (approximately 410m north). Therefore, this site is likely to have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside of flood zone 3, although a section of the western end of the site falls within flood zone 3, however it is considered that it may be possible to avoid developing within this area. Therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity and 8: recreation and leisure. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H332: Land west and south of Leas Avenue, Netherthong, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The south-eastern part of this site is within 31-35 minutes of an employment node whereas the central part is more than 60 minutes from an employment node. Overall, a mixed effect is likely – negligible for the south-eastern part and significant negative for the central part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+ +?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The far south-eastern part of this site falls within 11-15 minutes of a primary school, 11-15 minutes of a secondary school and 26-30 minutes of a further education facility. The south-west of the site is within 26-30 minutes of a primary school and more than 60 minutes from a secondary school and further education facility. In between, journey times to education facilities vary between those two extremes. Overall a mixed effect is likely – significant positive for the far south-eastern part and minor negative for the south-west of the site.

SA Objectives	SA Score	Justification
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 6-10 minutes from a GP and more than 60 minutes from a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m east and south, and these receptors could be exposed to noise and light pollution during construction of the site. A minor negative effect is therefore likely.
6. Retain and enhance access to local services and facilities.	+/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The far south-eastern corner of this site is within 26-30 minutes of a local centre and 6-10 minutes from a town/district centre, whereas the far south-western corner is more than 60 minutes from a local centre and 26-30 minutes of a town/district centre. In between, journey times to education facilities vary between those two extremes. Overall, a mixed effect is likely – minor positive for the far south-eastern corner and significant negative for the south-western corner.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	This site is crossed by a PRoW footpath which could be lost or disrupted if the site is developed. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden approximately 120m to the east. Other recreational facilities and area of open space include areas for children and young people, a cemetery, areas of semi-natural and natural greenspace, outdoor sports facilities, a sports centre and other parks and gardens. The site is also surrounded by a number of PRoW footpaths. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (12.57ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of

SA Objectives	SA Score	Justification
prudent use of land.		land than development on brownfield sites or sites of lower quality agricultural land. This site is large (12.57ha) and on greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (12.57ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Holmroyd Wood approved Local Wildlife Site is the only designation within 1km of this site; therefore a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore, a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 3: education, 8: recreation and leisure, and 9: housing. Potential significant negative effects were identified for SA objectives 1: employment, 6: local services, 8: recreation and leisure, 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H333: Land south of Jill Lane, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 11-15 minutes travel time of an employment node, and therefore, a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 6-10 minutes of a primary school, and the majority of the site is within 11-15 minutes of a secondary school and 16-20 minutes of a further education facility. Therefore, a significant positive effect is likely.
4. Improve the health of local people and ensure that they	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The majority of this site is within 16-20 minutes travel time of a GP and 41-45 minutes of a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m west and south of the site, and these residents could be affected by noise and light pollution during construction. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 6-10 minutes of a local centre and the majority of the site is within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a park and garden approximately 100m to the west. Additional facilities and areas of open space include other parks and gardens, outdoor sports facilities, allotments, a cemetery and areas for children and young people. There are a number of PRow footpaths to the north and west of this site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.31ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.31ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The majority of this site is also on grade 3 agricultural land which reinforces the negative effect.
12. Protect and enhance the character of Kirklees and the	-?	This site is small (1.31ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close

SA Objectives	SA Score	Justification
quality of the landscape and townscape.		<p>proximity of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant effects identified.		

H334: Land to the south east of Hermitage Park, Lepton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The central part of this site is within 11-15 minutes of an employment node, whereas the northern and southern ends of the site are within 16-20 minutes of an employment node. Although accessibility varies across the site between these two extremes, there is a significant positive effect overall.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The western end of this site is within 6-10 minutes of a primary school and 11-15 minutes of a secondary school and further education facility. The far central southern part of this site is within 16-20 minutes of a primary school, 21-25 minutes of a secondary school and 26-30 minutes of a further education facility. In between, journey times to education facilities vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the western end of the site and negligible for the far southern end.
4. Improve the health of local	+/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare

SA Objectives	SA Score	Justification
people and ensure that they can access the health and social care they need.		facilities are easily accessible from housing sites there will be positive effects on residents' health. The western end of this site is within 6-10 minutes of a GP and 31-35minutes of a hospital, whereas the south-eastern part of the site is within 16-20 minutes of a GP and 51-55 minutes of a hospital. In between, journey times to health facilities vary between those two extremes. Overall a mixed effect is likely – potentially minor positive for the western end, and negligible for the south-eastern part. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m to the north of the site, and these residents could be affected by noise and light pollution during construction. There is also an industrial building to the west which could lead to future residents being exposed to noise pollution over the longer term. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+/-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The western end of this site is within 11-15 minutes of a local centre and 6-10 minutes of a town/district centre, whereas the southern part of the site is within 21-25 minutes of a local centre and 16-20 minutes of a town/district centre. In between, journey times to local services vary between those two extremes. Overall a mixed effect is likely – potentially minor positive for the western end and minor negative for the southern end.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a green corridor directly adjacent to the west. Additional facilities and areas of open space include areas of semi-natural and natural greenspace, outdoor sports facilities, amenity greenspace and a Local Nature Reserve. There are a number of PRoW footpaths surrounding the site, one of which runs along the western side of the site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (5.06ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.

SA Objectives	SA Score	Justification
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (5.06ha) and on greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is not within an area of high quality agricultural land
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (5.06ha) and on greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA G9: Fenay Beck Valley & Tributaries, as identified in the 2015 Landscape Character Assessment for Kirklees. This LCA comprises the main valley of the Fenay Beck River. There are high levels of broadleaved woodland cover. Tranquillity is variable throughout the LCA, with the less developed and more rural tributary valleys being much more tranquil than the main Fenay Beck valley due to the main roads and larger settlements.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Scheduled Monument at Castle Hill (this site forms part of the area of open countryside which contributes to the setting of the Scheduled Monument). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Lepton Great Wood candidate Local Wildlife Site is approximately 110m east of the site, and Lepton Great Wood Local Geological Site is approximately 210m to the east also. Therefore, a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and mostly outside of flood zone 3 (with the exception of a small part of the southern end of the site); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 11: use of land, 12: character and landscape and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H335: Land south of Roaine Drive, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is more than 60 minutes from an employment node; therefore a significant negative effect is likely for this SA objective.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary school and 31-35 minutes from a secondary school. Therefore, a minor positive effect is likely.
4. Improve the health of local people and ensure that they	--	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The whole of this site is within 36-40 minutes travel time of a GP and more than 60 minutes from a hospital. Therefore, a significant negative effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m to the north and west of the site, and these residents could be affected by noise and light pollution during construction. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 16-20 minutes of a local centre and the majority of the site is within 21-25 minutes of a town/district centre. Overall a minor negative effect is anticipated.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace approximately 70m north-west of the site. Other recreational facilities and areas of open space include an outdoor sports facility, a park and garden and area for children and young people. There are a number of PRoW footpaths surrounding to the east and west. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.56ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.56ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (1.56ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Underbank Conservation Area (the loss of this site and its development could harm elements that contribute to the significance of this designation). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified for SA objectives 1: employment and 4: health. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H336: East of Business and Industry allocation B8.1, Lindley Moor Road, Lindley Moor, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The south-eastern part of this site is within 6-10 minutes travel time of an employment node, whereas the north-western part of the site is within 31-35 minutes of an employment node. In between, journey times to employment vary between those two extremes. Overall, a mixed effect is likely – potentially significant positive for the south-eastern part and negligible for the western part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The south-eastern part of this site is within 6-10 minutes travel time of a primary school and 11-15 minutes from a secondary school and further education facility. The central western part of this site is within 21-25 minutes of a primary school, 51-55 minutes of a secondary school and 46-50 minutes of a further education facility. In between, journey

SA Objectives	SA Score	Justification
		times to education facilities vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the south-eastern part of the site and minor negative for the central western part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	++/0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The south-eastern part of the site is within 6-10 minutes travel time of a GP and 11-15 minutes of a hospital whereas the central western end of this site is within 26-30 minutes of a GP and 31-35 minutes of a hospital. In between, journey times to health facilities vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the south-eastern part, and negligible for the central western part. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	--	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. This site is adjacent to the A643 (Lindley Moor Road) which could result in future residents being exposed to noise pollution over the long term. A significant negative effect is therefore likely. In addition, there are existing residential properties within 100m to the east and south of the site, and these residents could experience noise and light pollution during construction of the site. This reinforces the negative effect.
6. Retain and enhance access to local services and facilities.	++/--	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The far southern part of this site is within 5 minutes of a local centre and 6-10 minutes of a town/district centre, whereas the central western part of the site is within 31-35 minutes of a local centre and town/district centre. In between, journey times to local services vary between those two extremes. Overall a mixed effect is likely – potentially significant positive for the far southern part and significant negative for the central western part.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	There is an area of semi-natural and natural greenspace within this site, as well as two PRow footpaths, and these could be lost if this site is developed. However, there are a number of other recreational facilities and areas of open space within 600m of the site which could be used by residents, including parks and gardens, amenity greenspace, areas for children and young people, allotments and other areas of semi-natural and natural greenspace. There are also a number of PRow footpaths to the south-east and north-west. Therefore, a mixed effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (26.74ha); therefore a significant positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	--	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is large (26.74ha) and on mostly greenfield land meaning that there is likely to be a significant negative effect on this objective. The site is not within an area of high quality agricultural land
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	This site is large (26.74ha) and on mostly greenfield land; therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Old Lindley Moor Local Geological Site which is approximately 610m west of the site and is the only designation within 1km. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 6: local services, 8: recreation and leisure, 9: housing, 10: sustainable transport and 19: climate change. Potential significant negative effects were identified for SA objectives 5: amenity, 6: local services, 8: recreation and leisure, 11: use of land and 12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H337: Dobb Top Road, Holmbridge, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	--	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 51-55 minutes of an employment node; therefore a significant negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The whole of this site is within 11-15 minutes travel time from a primary school and 21-25 minutes from a secondary school. A minor positive effect is likely for this SA objective.
4. Improve the health of local people and ensure that they	-	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The whole of this site is within 26-30 minutes of a GP and more than 60 minutes from a hospital. A minor negative effect is anticipated. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m to the north and west of the site, and these residents could be affected by noise and light pollution during construction and, as a result, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 21-25 minutes travel time from a local centre and the majority of the site is within 21-25 minutes from a town/district centre. Overall a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace approximately 160m north-east of the site. Other recreational facilities and areas of open space include an outdoor sports facilities, a park and garden, cemeteries, and amenity greenspace. There are a number of PRoW footpaths to the north and south of the site. A significant positive effect is likely overall.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.7ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.7ha) and on greenfield land meaning that there is likely to be a minor negative effect on this

SA Objectives	SA Score	Justification
		objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.7ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Netherley House (the loss of this site and its development could harm elements that contribute to the significance of this asset). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Yateholme Reservoirs and Plantations candidate Local Wildlife Site is approximately 50m west of this site, and therefore this site is likely to have a significant negative effect on this SA objective. Digley Quarries, Holmbridge Local Geological Site is also within 775m of the site.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. Potential significant negative effects were identified for SA objectives 1: employment and 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H338: Birchencliffe Hill Road, Birchencliffe, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 11-15 minutes travel time of an employment node, therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes of a primary school and is wholly within 21-25 minutes of a secondary school. Overall a minor positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	++	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 6-10 minutes of a GP and 11-15 minutes of a hospital. Therefore, a significant positive

SA Objectives	SA Score	Justification
social care they need.		effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of sensitive receptors within 100m south, west and north-east of this site, including existing residential properties, commercial premises and a place of worship. These receptors could experience noise and light pollution during construction of the site, and a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 minutes of a local centre and the whole of this site is within 6-10 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is a cemetery directly adjacent to the south of the site. Other facilities and areas include semi-natural and natural greenspace, outdoor sports facilities, parks and gardens, amenity greenspace and areas for children and young people. There are also a number of PRow footpaths surrounding this site, one of which is directly adjacent to the north. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is large (0.8ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.8ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.8ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Grade II Listed Lindley Methodist Church as well as 43 and 47 East Street (the loss of this area would harm elements which contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	Grimescar Wood approved Local Wildlife Site is approximately 800m north-east of the site and is the only designation within 1km. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to seven of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 4: health, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no potential significant negative effects identified.		

H339: Land East of Abbey Road North, Shepley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The whole of this site is within 26-30 minutes travel time of an employment node, therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 16-20 minutes of a primary school and is wholly within 21-25 minutes of a secondary school. Overall a negligible effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 11-15 minutes travel time of a GP and 51-55 minutes of a hospital. Therefore, a minor positive effect is likely. The site is not within or adjacent to an AQMA.

SA Objectives	SA Score	Justification
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m east and west which could experience noise and light pollution during construction of the site. In addition, there is an industrial building (Victoria Mills) directly adjacent to the south which could result in future residents being exposed to noise over the long term. Overall, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The whole of this site is within 11-15 minutes of a local centre and 31-35 minutes of a town/district centre. Therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is semi-natural and natural greenspace and amenity greenspace approximately 280m west of the site. Other facilities and areas include outdoor sports facilities, allotments, cemeteries and areas for children and young people. There are also a number of PRow footpaths surrounding this site, one of which is directly adjacent to the south, as well as PRow bridleways. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.1ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is relatively small (1.1ha) and on mostly greenfield land meaning that there is likely to be a minor negative effect on this objective. The whole of this site is also on grade 3 agricultural land which reinforces the negative effect.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is relatively small (1.1ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	There are a number of biodiversity designations within 1km of this site, including Yew Tree Wood approved Local Wildlife Site (approximately 320m east), Gelder Wood candidate Local Wildlife Site (approximately 730m north), Shepley Mill Wood (approximately 800m north-east) and Upper and Lower Stones Wood (approximately 990m north-west). Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and is outside of flood zone 3; therefore a minor negative effect is likely.
17. SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to two of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure. There were no potential significant negative effects identified.		

H340: Busk Farm, Northfield Lane, Highburton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 16-20 minutes travel time of an employment node, therefore a significant positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?/0?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The far western part of this site is within 11-15 minutes of a primary school and 21-25 minutes of a secondary school, whereas the central to eastern part of the site is within 21-25 minutes of a primary school and 26-30 minutes of a secondary school. In between, journey times to education facilities vary between those two extremes Overall, a mixed effect is likely – potentially minor positive for the far western part and negligible for the central to eastern part.
4. Improve the health of local people and ensure that they	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The majority of this site is within 21-25 minutes travel time of a GP and 51-55 minutes of a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are a number of existing residential properties within 100m north, east, south and west which could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 21-25 minutes of a local centre and 26-30 minutes of a town/district centre. Therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility approximately 160m south. Other facilities and areas include areas of semi-natural and natural greenspace, green corridors, and parks and gardens. There are also a number of PRow footpaths surrounding this site, one of which runs along the northern edge of the site. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.84ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.84ha) and on mostly greenfield land meaning that there is likely to be a minor negative effect on this objective. The whole of this site is also within grade 3 agricultural land and this reinforces the negative effect.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This site is small (0.84ha) and on mostly greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.</p> <p>The site lies in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	Lepton Great Wood candidate Local Wildlife Site is approximately 170m north of this site, and Lepton Great Wood Local Geological Site is approximately 190m north of the site. Therefore, a significant negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on mostly greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mostly greenfield land therefore a minor negative effect is likely on this SA objective.</p>

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: recreation and leisure, 10: sustainable transport and 19: climate change. A potential significant negative effect was identified for SA objective 14: biodiversity and geodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H342: Mill Moor Road, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	-	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 41-45 minutes travel time of an employment node, therefore a minor negative effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	-?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school and 36-40 minutes of a secondary school. Overall, a minor negative effect is likely.
4. Improve the health of local people and ensure that they	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.

SA Objectives	SA Score	Justification
can access the health and social care they need.		The majority of this site is within 16-20 minutes travel time of a GP and 51-55 minutes of a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m north, north-west, south-east and south, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	-	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 26-30 minutes of a local centre and 16-20 minutes of a town/district centre. Therefore, a minor negative effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	+ +/--?	The site contains an area of semi-natural and natural green space which could be lost as a result of housing development. However, there are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an area of semi-natural and natural greenspace which is directly adjacent to the north. Other facilities and areas include a green corridor, areas for children and young people, additional semi-natural and natural greenspace and an outdoor sports facility. There are also a number of PRow footpaths and bridleways surrounding this site. Therefore, a mixed (significantly positive and significantly negative) effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.3ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.3ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.

SA Objectives	SA Score	Justification
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>The Peak District National Park is approximately 180m south-west of this site; therefore a significant negative effect is likely due to the potential for the site to adversely affect the quality of the landscape. This effect will be uncertain, however, until the design of the development is known. The site is also on greenfield land, which reinforces the negative effect.</p> <p>The site lies in LCA F5: Holme & Hall Dyke (Holmfirth & Meltham), as identified in the 2015 Landscape Character Assessment for Kirklees. This landscape comprises steep incised valleys associated with the upper parts of River Holme and its tributaries. Mixed semi-natural woodlands are found along the waterways and on the steepest slopes of the valleys. There are contrasting levels of tranquillity throughout the LCA, influenced by proximity to development and roads. Perceptions of tranquillity and remoteness are greatest on the fringes of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, meaning that it considers that the development of the site is unlikely to result in harm to any designated heritage asset. The effect on this SA objective is therefore likely to be negligible although this is uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development and opportunities may exist to enhance the setting of heritage features.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	South Pennine Moors SAC, Peak District Moors SPA and Dark Peak SSSI are approximately 750m west of this site. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3 (with the exception of the far north-eastern part of the site, although development in this part may be avoidable); therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.

SA Objectives	SA Score	Justification
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to one of eight of the features assessed. Therefore, a minor positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objective 8: recreation and leisure (part of a mixed effect overall). Potential significant negative effect was identified for SA objective 8: recreation and leisure (part of a mixed effect overall) and12: character and landscape. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H343: North of Helme Lane, Meltham, Holmfirth

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of an employment node, therefore a negligible effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 11-15 minutes travel time of a primary school and secondary school and 26-30 minutes of a further education facility. Overall, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and	+	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The majority of this site is within 6-10 minutes travel time of a GP and 41-45 minutes of a hospital. Therefore, a minor

SA Objectives	SA Score	Justification
social care they need.		positive effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m south and south-west, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 11-15 minutes of a local centre and 6-10 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility which is approximately 50m to the south. Other facilities and areas include additional outdoor sports facilities, areas for children and young people, a cemetery, allotments and a park and garden. There are also a number of PRoW footpaths surrounding this site, and a national cycle route is directly adjacent to the south. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (1.18ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (1.18ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and	-?	This site is small (1.18ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park.

SA Objectives	SA Score	Justification
townscape.		The site lies mainly within LCA D7: Peak Fringe Upland Pastures, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a broad terrace, comprising small square fields and is sparsely wooded. The settlement pattern is dispersed and there is a strongly rural, traditional agricultural character, although perceptions of tranquillity reduce closer to Huddersfield in the east.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Helme Conservation Area (this site forms part of the area which contributes to the significance of this designation). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	The only designation within 1km of this site is Folly Dolly Falls Local Geological Site which is approximately 730m to the east. Therefore, a minor negative effect is likely.
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to six of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no significant negative effects identified.		

H344: Land south east of Shillbank View, Mirfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 21-25 minutes travel time of an employment node, therefore a minor positive effect is likely.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils. The majority of this site is within 6-10 minutes travel time of a primary school, 11-15 minutes of a secondary school and 26-30 minutes of a further education facility. Overall, a significant positive effect is likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	0	The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health. The whole of this site is within 16-20 minutes travel time of a GP and 41-45 minutes of a hospital. Therefore, a negligible effect is likely. The site is not within or adjacent to an AQMA.
5. Protect local amenity including avoiding noise and light pollution.	-	Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term. There are several properties within 100m north and east of the site, and the residents of such could experience noise and light pollution during construction of the site. Therefore, a minor negative effect is likely.
6. Retain and enhance access to local services and facilities.	+	The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities. The majority of this site is within 6-10 and 11-15 minutes of a town/district centre. Therefore, a minor positive effect is likely.
7. Make our communities safer by reducing crime, anti-	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting,

SA Objectives	SA Score	Justification
social behaviour and the fear of crime.		could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	There are a number of recreational facilities and areas of open space within 600m of the site which could be used by residents, the closest of which is an outdoor sports facility which is directly adjacent to the east of the site. Other facilities and areas include a cemetery, other outdoor sports facilities, parks and gardens and areas for children and young people. There are also a number of PRow footpaths to the south and west. Therefore, a significant positive effect is likely for this SA objective.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is small (0.72ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non-car based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This site is small (0.72ha) and on greenfield land meaning that there is likely to be a minor negative effect on this objective. The site is not within an area of high quality agricultural land.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This site is small (0.72ha) and on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within close proximity of the Peak District National Park. The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the Castle Hill Hill Motte and Bailey Castle Scheduled Monument, Grade II* Listed Church of St. Mary and Grade II Listed tower of Church of St. Mary (the loss of this site and its subsequent development could harm elements that contribute to the significance of these assets). The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	The site is not within 1km of any designated biodiversity or geodiversity sites; therefore a negligible effect on this SA objective is most likely. However, this is uncertain as there may still be effects on non-designated biodiversity, and depending on the design of the development, it may be possible to incorporate biodiversity enhancements.

SA Objectives	SA Score	Justification
15. Reduce air, water and soil pollution.	0	This site is not within or directly adjacent to an AQMA, therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people	-	This site is on greenfield land and outside flood zone 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land therefore a minor negative effect is likely on this SA objective.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, the site was classed as entirely or mainly 'green' in terms of its access to four of eight of the features assessed. Therefore, a significant positive effect is likely overall.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 3: education, 8: recreation and leisure, 10: sustainable transport and 19: climate change. There were no significant negative effects identified.		

H345: Low Road, Dewsbury Moor, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect. It is also within 16-20 minutes of a further education institute which is likely to contribute to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	++	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>This site is within 11-15 minutes travel time of a GP and within 16-20 minutes of a hospital; therefore a significant positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m, adjacent to the north, east and south site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 11-15 minutes travel time of both a local centre and a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>The site is within 600m of a number of areas of open space, including a green corridor which runs adjacent to the western site boundary, a public park located approximately 25m to the west of the site and an area of amenity greenspace located approximately 49m to the east. A significant positive effect is therefore identified.</p>

SA Objectives	SA Score	Justification
usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (0.54ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all eight of the eight features assessed. Therefore, a significant positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (0.54ha) on mainly greenfield land (although there a several small buildings within the site boundary); therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a small site (0.54ha) on mainly greenfield land (although there a several small buildings within the site boundary); therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in an area classed as 'urban' in the 2015 Landscape Character Assessment for Kirklees.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 388m from the Lower Spen Wildlife Area Local Nature Reserve; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (although there a several small buildings within the site boundary) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use,	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing

SA Objectives	SA Score	Justification
recovery and recycling of waste close to source.		buildings and materials although this is uncertain depending on the previous use of the site. This site is on mainly greenfield land (although there are several small buildings within the site boundary); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such as the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to all eight of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 4: health, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No potential significant negative effects were identified in relation to any of the SA objectives.		

H347: Land North of Cockley Hill lane, Kirkheaton, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 36-40 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The majority of this site is within 11-15 minutes travel time of a primary school (although a small area along the western boundary is within 6-10 minutes travel time) and 36-40 minutes travel time from a secondary school (although the eastern part of the site is within 41-46 minutes); a minor positive effect is therefore likely.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of a GP (although an area to the west of the site is within 5 minutes travel time) and within 46-50 minutes of a hospital (although an area to the east of the site is within 51-55 minutes); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the southern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of a local centre (although a small area on the west site boundary is within 5 minutes travel time) and the whole site is within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 600m of a number of areas of open space, including allotments located approximately 302m to the west of the site and a recreation ground with a children's playground, located approximately 458m to the north west. In addition there is a bowling green located approximately 375m to the north west. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.06ha); therefore a minor positive effect is likely.

SA Objectives	SA Score	Justification
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	0?	<p>This site is not within 1km of any designated biodiversity sites; therefore development here could have a negligible effect on this SA objective.</p>
15. Reduce air, water and soil pollution.	0	<p>This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.</p>
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	<p>This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.</p>
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p>

SA Objectives	SA Score	Justification
		This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.</p>
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation. No potential significant negative effects were identified in relation to any of the SA objectives.		

H348

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0/--	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>The western part of this site is within 36-40 minutes travel time of the nearest employment node; however the eastern part is over an hour travel time from the nearest employment node. In between, journey times vary between these two extremes. A mixed effect is therefore likely – negligible in the western part of the site and significant negative in the eastern part of the site.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	+?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 6-10 minutes travel time of a primary school (although an area to the north east of the site is within 11-15 minutes travel time). A very small area to the south of the site is within 21-25 minutes</p>

SA Objectives	SA Score	Justification
		travel time of a secondary school; however the eastern area is over an hour travel time. In between, journey times vary between these two extremes. Despite these variances a minor positive effect is likely overall as the whole site is within 15 minutes travel time of a primary school.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 11-15 minutes travel time of a GP (although an area to the west of the site is within 6-10 minutes travel time) and over an hour travel time from a hospital (although an area to the west is within 56-60 minutes travel time). Therefore a minor positive effect on this SA objective is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the south, west and part of the east site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	-	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>A small part to the south of this site is within 21-25 minutes travel time of a local centre; however the eastern part of the site is over an hour travel time from a local centre. In between, journey times vary between these extremes. The majority of the site is within 16-20 minutes travel time of a town/district centre (although a small area to the east of the site is within 21-25 minutes travel time). Therefore a minor negative effect is likely on this SA objective.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 600m of a number of areas of open space, including an area of semi natural and natural greenspace approximately 47m to the south west of the site and an area of amenity greenspace located approximately 237m to the south of the site. In addition there is an existing Public Right of Way directly adjacent to the eastern site boundary. A significant positive effect is therefore identified.

SA Objectives	SA Score	Justification
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (2.57ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed, and mainly 'green' for a third. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (2.57ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (2.57ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E1: Holmfirth-Meltham, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with considerable tree and woodland cover. Although the proximity of the urban centres exerts an influence on landscape character, with urban fringe land uses evident in many areas, there are pockets of relative tranquillity away from the main settlements. There is a strong visual relationship with the moorlands of the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the adjoining Netherthong/Deanhouse Conservation Area. The loss of this currently-open area and its subsequent development could harm elements which contribute to the significance of this area.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 525m from the Holmroyd Wood Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to two of the eight features assessed, and mainly 'green' for a third. Therefore, a minor positive effect is likely.
Summary of SA findings: A potential significant positive effect was identified for this site in relation to SA objective 8: leisure and recreation, and a potential significant negative effect was identified in relation to SA objective 1: employment (part of an overall mixed effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H349: Land at Ouzelwell Lane, Thornhill Lees, Dewsbury

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The majority of this site is within 6-10 minutes travel time of the nearest employment node (although a small area to the south of the site is within 11-15 minutes); therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.

SA Objectives	SA Score	Justification
3. Ensure education facilities are available to all.	0?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>The majority of this site is within 21-25 minutes travel time of a primary (although a small area to the south is within 26-30) and 31-35 minutes travel time from a secondary school (although an area to the south is within 36-40 minutes travel time); therefore a negligible effect is likely.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of a GP (although an area to the south is within 11-15 minutes) and the whole site is within 31-45 minutes of a hospital; therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there is a railway line adjacent to the north western site boundary and an industrial area adjacent to the north eastern site boundary which may have a long term effect on residential properties in this part of the site. There are also a number of sensitive receptors within 100m of the eastern site boundary, which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	+	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 16-20 minutes travel time of a local centre and within 11-15 minutes of a town/district centre; therefore a minor positive effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and	++	<p>The site is within 600m of a number of areas of open space, including allotments located approximately 497m to</p>

SA Objectives	SA Score	Justification
support the provision of new recreation facilities and areas of open space and encourage their usage.		the north east of the site and two areas of semi-natural and natural greenspace located approximately 501m to the east and 272m to the north west of the site. In addition there is a Public Right of Way directly adjacent to the north western site boundary. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (3.46ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
11. Secure the efficient and prudent use of land.	-	Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land. This is a relatively small site (3.46ha) on greenfield land, the majority of which is classified as being of Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	This is a relatively small site (3.46ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development. The site is not within 500m of the Peak District National Park. The site lies in LCA E7: Emley Moor Northern Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of gently undulating elevated slopes with abundant woodland cover. The proximity of the urban centres exerts an influence on landscape character with urban fringe land uses evident in many areas.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 641m from the Jordan Wood and Oliver Wood Local Wildlife Site and 902m from the Lower Spen Wildlife Area Local Wildlife Site and Local Nature Reserve; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

SA Objectives	SA Score	Justification
development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.		
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to three of the eight features assessed. Therefore, a minor positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment and 8: leisure and recreation, and a potential significant negative effect was identified in relation to SA objective 5: amenity. This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H350

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. This site is within 11-15 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also

		<p>depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of both a primary and secondary school so is likely to have a significant positive effect. It is also within 6-10 minutes of a further education institute, which will also contribute to the positive significant effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The majority of this site is within 6-10 minutes travel time of a GP (although there is an area to the north of the site within 5 minutes travel time). The southern part is within 56-60 minutes travel time of a hospital, while the northern part is within 46-50 minutes. In between, journey times vary between these two extremes. Despite this a minor positive effect is likely as the whole site is within 15 minutes of a GP. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors within 100m of the northern and eastern site boundary, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The majority of this site is within 6-10 minutes travel time of both a local centre and a town/district centre (although an area to the south is within 11-15 minutes travel time); therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their	++	<p>The site is within 600m of a number of areas of open space, including an area of unspecified open space, and an area of amenity greenspace, located approximately 435m and 316m to the north west of the site. In addition there is an existing public bridleway located approximately 416m to the south west of the site. A significant positive effect is therefore identified.</p>

usage.		
9. Ensure all people are able to live in a decent home which meets their needs.	+	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (4.53ha); therefore a minor positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (4.53ha) on greenfield land, the majority of which is classified as being of Grade 3 agricultural quality; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (4.53ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies mainly in LCA E6: Fenay Beck Valley Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a gently undulating plateau with large blocks of tree and woodland cover found on slopes. It is perceived as a tranquil landscape with a traditional rural feel, although this is impacted upon by the main roads and urban development around Shepley.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	<p>Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset.</p> <p>The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 740m from the Springs Wood candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.

17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to seven of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation, 10: sustainable transport and 19: climate change. No significant negative effects were identified in relation to any of the SA objectives.		

H351: Land North of Bradley Road, Bradley, Huddersfield

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++/+	While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs. The north east part of this site is within 5 minutes travel time of the nearest employment node; however the central area is within 21-25. In between, journey times vary between these two extremes. A mixed effect on this SA objective is therefore likely - significant positive in the north eastern part of the site and positive in the central part.
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.
3. Ensure education facilities are available to all.	++?/--?	The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.

SA Objectives	SA Score	Justification
		The south west part of this site is within 11-15 minutes travel time of a primary school and within 5 minutes travel time of a secondary school; however a small part in the east of the site is more than an hour travel time of both a primary school and a secondary school. In between, journey times vary between these two extremes. A mixed effect on this SA objective is therefore likely – significant positive in the south west part of the site and significant negative in the eastern part.
4. Improve the health of local people and ensure that they can access the health and social care they need.	+/--	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The western part of this site is within 11-15 minutes travel time of a GP; however an area to the east of the site is more than an hour travel time site of a GP. In between, journey times vary between these two extremes. The north west part of this site is within 31-35 minutes travel time of a hospital; however an area to the east of the site is more than an hour travel time of a hospital. In between, journey times vary between these two extremes. A mixed effect on this SA objective is therefore likely – minor positive in the north west part of the site and significant negative in the eastern part. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	--	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>A section of the southern site boundary is directly adjacent to the A6107 which may mean that residents in that part of the site are affected by road noise. There are also a number of existing residential properties adjacent to the site to the south and west which may be affected by noise during the construction phase. A significant negative effect on this SA objective is therefore likely.</p>
6. Retain and enhance access to local services and facilities.	0/--	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>The western part of this site is within 11-15 minutes travel time of a local centre and within 16-20 minutes travel time of a town/district centre; however an area to the east of the site is more than an hour travel time to both a local centre and a town/district centre. In between, journey times vary between these two extremes. A mixed effect on this SA objective is therefore likely – negligible in the western part of the site and significant negative in the eastern part.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.

SA Objectives	SA Score	Justification
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++	The site is within 600m of a number of areas of open space, including a cycle route (part of Central Kirklees cycling map) and a golf course, both of which are directly adjacent to the eastern site boundary. In addition there are two areas of semi-natural and natural greenspace located approximately 72m to the west and 235m to the south of the site. A significant positive effect is therefore identified.
9. Ensure all people are able to live in a decent home which meets their needs.	++	All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively large (12.07ha); therefore a significant positive effect is likely.
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	+	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' or mainly 'green' in terms of its access to two of the eight features assessed. Therefore, a minor positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (12.07ha) on mainly greenfield land (although there is an area of existing development to the west of the site), the majority of which is classified as being of Grade 3 agricultural quality; therefore a significant negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (12.07ha) on mainly greenfield land (although there is an area of existing development to the west of the site); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E2: Barkisland-Holywell Green, as identified in the 2015 Landscape Character Assessment for Kirklees. This area comprises steeply rising land with frequent tree and woodland cover. It is an urban fringe landscape. Some areas retain a relative tranquil, rural character despite the proximity of urban development. Increasing urbanisation on the LCA's fringes creates a landscape of transition. The area has an important visual relationship with the National Park.</p>
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on the barn at Shepherd's Thorn Farm which is a Grade II Listed Building. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will</p>

SA Objectives	SA Score	Justification
		depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is approximately 363m from the Lower Fell Greave candidate Local Wildlife Site; therefore development here could have a minor negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (although there is an area of existing development to the west of the site) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on mainly greenfield land (although there is an area of existing development to the west of the site); therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	+	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. 11. Secure the efficient and prudent use of land.	--	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively large site (9.24ha) on mainly greenfield land (although an area to the north of the site contains several existing residential properties and an industrial area), the majority of which is classified as being of Grade 3 agricultural quality; therefore a significant negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	--?	<p>This is a relatively large site (9.24ha) on mainly greenfield land (although an area to the north of the site contains several existing residential properties and an industrial area); therefore development here could have a significant negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p>

		The site lies in LCA G11: Batley Fringe Incised Valleys, as identified in the 2015 Landscape Character Assessment for Kirklees. This is a landscape of discrete, small scale tributary valleys with some significant bands of broadleaved riparian woodland. Although mostly undeveloped, there is a strong urban influence, particularly in close proximity to main roads.
13. Conserve and enhance the historic environment, heritage assets and their settings.	?	<p>Historic England has rated this site as 'orange' in terms of the potential for effects on the historic environment, due to the uncertain potential impacts on Oakwell Hall which is a Grade I Listed Building. The loss of this area and its subsequent development could harm elements which contribute to the significance of this building.</p> <p>The effect on this SA objective is therefore uncertain and the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.</p>
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	--?	This site is directly adjacent to the Oakwell Park Local Wildlife Site, and Local Nature Reserve; therefore development here could have a significant negative effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on mainly greenfield land (although an area to the north of the site contains several existing residential properties and an industrial area) and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	<p>Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site.</p> <p>This site is on mainly greenfield land (although an area to the north of the site contains several existing residential properties and an industrial area); therefore a minor negative effect is likely.</p>
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	<p>The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as mainly 'green' in terms of its access to five of the eight features assessed. Therefore, a significant positive effect is likely.</p>
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment (part of mixed effect overall),		

3: education (part of mixed effect overall), 8: leisure and recreation, 9: housing, 10: sustainable transport and 19: climate change, and potential significant negative effects were identified in relation to SA objectives 11: land use (part of mixed effect overall), 12: landscape and 14: biodiversity. These issues will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.

H354: Land at Fieldhead Farm, White Lee Road, White Lee, Batley

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	++	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 6-10 minutes travel time of the nearest employment node; therefore a significant positive effect on this objective is expected.</p>
2. Achieve an economy better capable of growth through increasing investment, innovation and Entrepreneurship.	0	<p>The location of housing sites will not affect the success of the local economy. While housing development may result in job creation during the construction phase, this will not be influenced by the location of the development. Housing provision may also affect the size and location of the local workforce; however this is considered separately under SA objective 1 above. Therefore, the effects of all residential site options will be negligible.</p>
3. Ensure education facilities are available to all.	++?	<p>The availability of school and college places to serve the growing population will depend in part on whether new places are provided as part of new housing developments, which is unknown at this stage. Effects will also depend on how accessible existing schools and colleges are from residential site options, although there are uncertainties as the effects will depend on there being capacity at those schools and colleges to accommodate new pupils.</p> <p>This site is within 6-10 minutes travel time of a primary and within 11-15 minutes travel time of a secondary school so is likely to have a significant positive effect. It is also within 6-10 minutes of a further education institute, which will contribute to the significant positive effect.</p>
4. Improve the health of local people and ensure that they can access the health and social care they need.	+	<p>The location of housing sites will not affect the number or location of healthcare facilities; however where healthcare facilities are easily accessible from housing sites there will be positive effects on residents' health.</p> <p>The whole site is within 11-15 minutes travel time of a GP and the majority of the site is within 31-35 minutes travel time of a hospital (although a small area to the north of the site is within 26-30 minutes travel time); therefore a minor positive effect is likely. The site is not within or adjacent to an AQMA.</p>
5. Protect local amenity including avoiding noise and light pollution.	-	<p>Where new residential development is proposed within close proximity of sensitive receptors there may be negative effects on amenity as a result of increased noise and light pollution, particularly during the construction phase. New residential development within close proximity of major roads or railways or industrial areas may result in noise pollution affecting residents in the longer term.</p> <p>This site is not surrounded by existing residential development; however there are a number of sensitive receptors adjacent to the eastern and northern site boundaries, which may be affected by noise during the construction phase. A minor negative effect on this SA objective is therefore likely.</p>

SA Objectives	SA Score	Justification
6. Retain and enhance access to local services and facilities.	0	<p>The location of housing sites will not directly affect the number or range of services in a particular location (although a large scale housing development could potentially stimulate the provision of new services); however the location of housing sites could affect this objective by influencing people's ability to access existing services and facilities.</p> <p>This site is within 6-10 minutes travel time of a local centre and within 16-20 minutes of a town/district centre; therefore a negligible effect is likely.</p>
7. Make our communities safer by reducing crime, anti-social behaviour and the fear of crime.	0	<p>The effects of new housing developments on levels of crime and fear of crime will depend on factors such as the incorporation of green space within the housing sites which, depending on design and the use of appropriate lighting, could have an effect on perceptions of personal safety, particularly at night. However, such issues will not be influenced by the location of housing sites (rather they will be determined through the detailed proposals for each site) and so the effects of all of the potential residential sites on this SA objective will be negligible.</p>
8. Protect and enhance existing and support the provision of new recreation facilities and areas of open space and encourage their usage.	++/--?	<p>This site is within an area of semi-natural and natural greenspace, which could be lost as a result of housing development. In addition there are a large number of areas of open space within 600m of the site, including a bridleway directly adjacent to the south eastern boundary of the site, a children's playground located approximately 39m to the north and a public playing field located approximately 42m to the east of the site. A mixed (significant positive and potential significant negative) effect is therefore identified.</p>
9. Ensure all people are able to live in a decent home which meets their needs.	+	<p>All of the potential residential sites are expected to have positive effects on this objective, due to the nature of the proposed development and it is assumed that housing developments will include an appropriate proportion of affordable housing. This site is relatively small (1.59ha); therefore a minor positive effect is likely.</p>
10. Secure an effective and safe transport network which encourages people to make use of sustainable and active modes of transport.	++	<p>How well connected housing sites are to services, facilities and employment opportunities by sustainable modes of transport will affect the extent to which residents are able to make use of non car-based modes of transport day to day.</p> <p>In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.</p>
11. Secure the efficient and prudent use of land.	-	<p>Where development takes place on greenfield land or areas of high quality agricultural land it is a less efficient use of land than development on brownfield sites or sites of lower quality agricultural land.</p> <p>This is a relatively small site (1.59ha) on greenfield land; therefore a minor negative effect on this SA objective is likely.</p>
12. Protect and enhance the character of Kirklees and the quality of the landscape and townscape.	-?	<p>This is a relatively small site (1.59ha) on greenfield land; therefore development here could have a minor negative effect on this SA objective although this is uncertain depending on the design of the development.</p> <p>The site is not within 500m of the Peak District National Park.</p> <p>The site lies in LCA E8: Batley-Dewsbury Rural Fringes, as identified in the 2015 Landscape Character Assessment for Kirklees. This comprises gently undulating land with varied tree cover. Urban expansion and associated land</p>

SA Objectives	SA Score	Justification
		uses are spreading into the farmland landscape. Some areas still retain a relative sense of tranquillity and rural character, however increasing urbanisation creates a landscape of transition.
13. Conserve and enhance the historic environment, heritage assets and their settings.	0?	Historic England has rated this site as 'green' in terms of the potential for effects on the historic environment, as the development of this site is unlikely to result in harm to any designated asset. The effect on this SA objective is therefore negligible but uncertain as the potential for effects on cultural heritage assets will depend on the exact scale, design and layout of the new development.
14. Maximise opportunities to protect and enhance biodiversity and geodiversity.	-?	This site is not within 1km of any designated biodiversity sites; therefore development here could have negligible effect on this SA Objective.
15. Reduce air, water and soil pollution.	0	This site is not within an AQMA; therefore a negligible effect on this SA objective is likely.
16. Prevent inappropriate new development in flood risk areas and ensure development does not contribute to increased flood risk for existing property and people.	-	This site is on greenfield land and is outside of flood zones 2 and 3; therefore a minor negative effect is likely.
17. Increase prevention, re-use, recovery and recycling of waste close to source.	-	Where housing development is proposed on brownfield land, there may be good opportunities for using existing buildings and materials although this is uncertain depending on the previous use of the site. This site is on greenfield land; therefore a minor negative effect is likely.
18. Increase efficiency in water, energy and raw material use.	0	While all new residential development is likely to involve an increase in energy and water consumption this will not be influenced by the location of residential sites. Similarly, all residential development will result in the increased consumption of minerals for construction but this will not be influenced by the location of residential sites. Therefore, all sites will have a negligible effect on this SA objective.
19. Reduce the contribution that the district makes to climate change.	++	The location of residential development will not affect the contribution that the buildings make to climate change, which will be influenced by other factors such the design of the buildings. However, where residential sites are well-connected by sustainable transport links to employment nodes, services and facilities, levels of car use and the associated greenhouse gas emissions are likely to be lower. In the accessibility heat mapping work that was undertaken for Kirklees Council, this site was classed as 'green' in terms of its access to six of the eight features assessed. Therefore, a significant positive effect is likely.
Summary of SA findings: Potential significant positive effects were identified for this site in relation to SA objectives 1: employment, 3: education, 8: leisure and recreation (part of an overall mixed effect), 10: sustainable transport and 19: climate change, and a potential significant negative effect was identified in relation to SA objective 8: leisure and recreation (part of a mixed overall effect). This issue will need to be considered further in terms of mitigation and/or enhancement, which may be achieved through Local Plan policies.		

H355

SA Objectives	SA Score	Justification
1: Increase the number and range of employment opportunities available for local people, and ensure that they are accessible.	0	<p>While the location of housing sites will not influence the number, location or type of employment opportunities available in Kirklees, the proximity of housing to employment nodes can affect people's ability to access jobs.</p> <p>This site is within 31-35 minutes travel time of the nearest employment node; therefore a negligible effect on this objective is expected.</p>
